Actually, IQ is not generally measured using a number any more
because there is more than one standard. The entry level IQ
for MENSA members is upper 2% of the general population. So
the IQ of the *average* MENSA member is something like the upper
1.5% of the general population. It would be whatever is the
average of the upper 2% of the bell-shaped curve.

> The question was (and still is) WHAT reference did you use...?!?!

I am most familiar with motorcycle gangs, the overwhelming majority
of which are white. And, for the record, what I said is that I wouldn't
be surprised if the majority of gangs are white. I didn't ever claim
to have a reference.

> A published FBI statistic? Something from the Attorney General's office?
> Any recognized organized crime task force? ANYTHING that DOESN'T come from The
> Star or The Inquirer?

Obviously since you seem to know the answer you must have the
FBI statistics so why not just publish them. If you don't have
them, what does that say about your references?

Hmmm...There might be some truth in this rumor. Maybe it is but wishful thinking on the part of the ARRL....especially those who can only think of the number of Hams of any abilities that can be said to make the hobby more popular.

BUT PLEASE THINK ABOUT: -
So far there is no more 20 wpm cw requirement for Extra, no more 13 wpm requirement for General, and no more Novice, Tech Plus, or Advanced Class.
When will the next shoes drop???
If trends continue there may well be no requirements for Tech license privilages...and next no requirements for any ham privilages...and IMHO this can only be expected to lead to no Ham Radio at all for anybody.

WE MUST REVERSE THE TREND. We must remember that there is a BASIS AND PURPOSE FOR AMATEUR RADIO.

Hams need MORE technical license classes,
73,
Bob Wex w2ilp (Ignore Licensing pessimisim?)

MEANS and ENDS
The gatekeeper in the capital city of Sung
became such an expert mourner after his father's
death, and so emaciated himself with fasts and
austerities, that he was promoted to high rank
in order that he might serve as a model of
ritual observance.
As a result of this, his imitators so deprived
themselves that half of them died. The others
were not promoted.
--Chuang Tzu--

Just the opposite of Tzu's means and ends...
The FCC has been the gatekeeper of Ham Radio...
but it is slowly opening that gate to all.
Who has promoted this dumbed down trend???
As a result of this trend half of the Real Hams

```
will be silent keys in a few years.  The other
hams may be mainly imitator repeater clunkers.
They can not be Real Hams if they lose innovative
motivation, pioneering spirit, sporting curiosity,
and don't have any technical intrests in
common.  Sadly there will be no higher Ham classes
to be promoted to.  Sadly there will be no Ham Radio.
   --w2ilp--

I have several sources, Cecil, most of which are EMS related articles on providing care in urban enviroments, especially where gang activity is rampant. The footnotes quote several FBI, DoJ, ATF and LAPD studies.

Guess which three socioeconomic subgroups you are most likely to be victimized in by a gang...?!?!

Even taking thier word on the matter with a huge grain of salt, I trust thier opinions on the matter way before I do yours.

>If you don't have them, what does that say about your references?<

Journal of Emergency Medical Services of Solana Beach, CA

Emergency Medical Services magazine of Van Nuys, CA.

Journal Of the American Medical Association.

Journal of the American Association of Osteopathic Surgeons. (THE organization that instituted EMS in the United States...they ARE the autorities on trauma in the United States)

Fish or cut bait Cecil...just ADMIT you made your numbers up since it is so overwelmingly apparent that you CANNOT substantiate your assertions.

You're busted, Cecil...more "King of the Mountain" assertions caught in the light of day by truth and facts.

I am sure Mark and Lennie are proud to have you in thier company.

Steve

Okay, I give up. What it the date and nature of the next change you expect
to see in ham radio. On what do you base your estimate of the date and the
specifics of the change?

> If trends continue there may well be no requirements for Tech license
> privilages...and next no requirements for any ham privilages...and IMHO
> this can only be expected to lead to no Ham Radio at all for anybody.

Eliminating a requirement that no longer serves the same purpose it served
when it was introduced in the early part of the last century is not a

"trend." On second thought, maybe it is -- one that hopefully could indicate that amateur radio might once again get in touch with modern radio technology. Is this what you are suggesting should be happening?

> As a result of this trend half of the Real Hams
> will be silent keys in a few years.

Do you really think that the changes in the Morse code testing will increase the death rate of Amateurs?

> They can not be Real Hams if they lose innovative
> motivation, pioneering spirit, sporting curiosity,
> and don't have any technical intrests in
> common.

And there are some who offer that eliminating a Morse code test will indeed result in some hams focusing their attention to "pioneering spirit." Most of the pioneering I can envision does not include OOK CW.

> Sadly there will be no higher Ham classes to be promoted to.

I guess that hams will have to promote themselves with accomplishments, much like Larry Roll's learning to fly model R/C airplanes.

> Sadly there will be no Ham Radio.

Another unprovable assertation. However, we can put a small wager on its being around at the end of 2009; would that be a reasonable time frame over which to speculate?

To the "gentleman" who just disparaged Pres. Clinton, I have news for you. His influenece in the recent normalization of trade with China bill which should be passed by the Senate despite a moron like Jesse Helms will prove to be one of the most important pieces of INTELLIGENT legislation to ever come down from Capitol Hill. Why?

BECAUSE IT'S ALL ABOUT OIL! That's right, OIL. Forget the rest of the stuff you've heard about what China will give us and vice versa---that country has GREATER oil reserves than all the OPECKERS combined!

The standard networks don't talk about it and neither do the WWCR and Genesis Network crowd but I got wind of it from my cousin Sidney who's a spy and that's the REAL REASON why we have cozied up to Red China and if Taiwan doesn't like it, that's too bad because that place is just an island which is a nothing.

As a way of saying thanks to Clinton, the Chinese Prime Minister "Red Fat Hung" will allow us to go in there and DRILL and buy at prices much much lower than that of OPEC's. It will have a fantastic effect on our economy which President Al Gore will exploit to the fullest.

And youse guys are so concerned with ham radio and the ARRL? As far as I'm concerned, the ARRL SOLD US OUT-it's as plain and simple as that and I ended my membership until the dues drop to $14.95/year. My suggestion is THINK CHINA! Visit Chinese restaurants more often. Overdose on MSG. Bring in more shirts. Throw out your silverware and buy chopsticks.

The sleeping giant in the far east will awaken with our help and emerge as the major global power in the 21st century and if you think she's going to nuke us, you're nuts. Once she sees all those Yankee greenbacks pouring into her economy and all the coolies going from pulling rickshaws to driving BMWs, her oil will drive that OPEC scam out of business. In fact the Israelis will sense a good deal and offer to buy their crude for $3 a barrel.

Oy vey what a day it'll be when China influences America so much that our school kids will learn to read "My Dog Spot" from top to bottom instead of from left to right.

There's a Chinaman in Clifton who went to jail for constantly peking into windows.

Jeff Pierce <piercej@preferred.com> wrote:

> <ARRL> now caters to the equipment manufacturers for advertising dollars.

According to the ARRL's annual reports, the advertising revenues are a distant third to dues and publications sales. In the June issue of QST, less than half of the ad space was for actual manufacturers.

Can you offer some examples of actions that ARRL has taken that you feel have been to the benefit of equipment manufacturers without being a benefit to Amateur Radio.

> My view is that it is a now a publishing house that also lobby's for it's
> publishing's area of interest on the side.

Can you explain where you believe this "lobbying" takes place? I didn't see anything in any FCC filing that lobbied for ARRL publications.

Last time I went past Rosewood's table at a convention, about 40% of the books looked like ARRL books. Maybe AES stocks the ones that sell the best.

Please take a look at the results of a search of the ARRL TIS database at:

http://www.arrl.org/cgi-bin/tisfind?case=on&patt=PUBLICATION%3eBOOK

then explain how a monopoly can have so much competition. And ARRL is even promoting those companies by including them in its database.

Actually, Clay, if you think about it a bit, there are a LOT of "burning issues" in ham radio. These are generally well documented in the ARRL Letter, the Web Extra and QST. I think that expecting a Director to reiterate all that info in a periodic newsletter is not a realistic expectation.

But let's put your assertation to the test; ARRL has documented the issues with wireless modem jacks very well, on its web pages, in the ARRL Letter, in the Web Extra and in QST. I know you CAN understand the issues, but do you? I can hardly think of something explained better, but I bet that only a relatively small percentage of hams have followed it from start to finish. Who could better set ARRL policy on that matter, those that have taken it upon themselves to be fully informed, or those who have not read the info as published? Would this matter really be best resolved by a poll of members, of resolved by HQ staff who have devoted hundreds of hours to studying the issue and working with the manufacturers, the FCC and the ARRL Board?

> Second, I think that there are too few directors. Our division covers
> two call areas. While I was a member of ARRL, I don't recall getting
> any info from a director except when time for election or reelection.
> What are the rules for increasing the number of directors?

The number of Directors is set in the ARRL bylaws. These can be modified by the ARRL Board of Directors. Each Director represents some 10k+- members, although Division sizes do vary. Most of the Directors also appoint Assistant Directors, although these are probably more accurately described as "Assistants to the Director." Only the Directors vote on ARRL policy. If you feel that the number of Directors should be changed, discuss this with your Director. Do consider, though, that there are direct costs to each Directorship, with travel expenses to and fro Board meetings and travel within a Division. This probably doesn't affect you much, because you have stated that you are no longer an ARRL member, but those who are footing the bills may hold opinions contrary to yours about how many Directors the membership should fund. BTW, speaking of funds, I will make sure that I haven't caused any misunderstanding; ARRL Directors and most officers receive no salary compensation -- only reimbursement for authorized expenses.

Some of the gap is made up by the ARRL Section Managers, who are elected people managing the ARRL Field Organization in their sections.

I don't think there's a contradiction. There's a difference of opinion. If I say a tree *is* making noise in the woods, even if nothing is around to hear it; you might say it does not. That is not a contradiction. It is a difference of opinion.

>

It's pretty hard for a non-member of MENSA to understand, Steve.
The area under the upper 2% of the bell-shaped curve does not
average out to 1%.

All I did was state my opinion based on my experiences, Steve. I ride a motorcycle so I am exposed primarily to motorcycle gangs. What percentage of motorcycle gangs are white? I said I wouldn't be surprised if the majority of gangs were white. I still would not be surprised if the majority of gangs were white.

I didn't make any assertions, Steve. I said I wouldn't be surprised if the majority of gangs are white. I still wouldn't be surprised if the majority of gangs are white. That's NOT an assertion that the majority of gangs are white. Why do you make false statements?

>Bill I checked the FCC database last night and my upgrade has been posted, I didn't take the FCC near as long as it took the arrl.<

How soon they forget.

There were occassions where FCC processing took as much as 2 months. Of course that's when the FCC did the testing, correlated the paperwork, forwarded it to Gettysburg, and THEN Gettysburg took thier time with it.

In as much as the FCC put the onus of responsibility on the VEC's to reorganize all the tests, make new ones, conduct the tests and then forward the paperwork to Gettysburg, I don't think four to six weeks to implement a new programis such a big problem.

The only people who were really affected were NEW licensee's. Upgraders had immediate access.

Hi Ed,
  First, I think that a Director that cannot formulate an important
issue or problem with ham radio, showing various facits of it, so that
his constituents can understand it, is not much of a leader.

  Second, I think that there are too few directors.  Our division covers
two call areas.  While I was a member of ARRL, I don't recall getting
any info from a director except when time for election or reelection.
What are the rules for increasing the number of directors?

73,
Clay N4AOX

When you said you knew a fellow nicknamed "len" who'd done just that.

Nowhere in those three quoted sentences do I say you knew about using a suffix
as a name. Rather, the custom has been to separate the suffix as a WORD, or
abbreviation. That you knew this is obvious because otherwise you wouldn't have
chosen the suffix that you did.
>
>> >I don't know anyone, anyone at all, that uses

It didn't go over my head at all. I just don't accept it as the only reason,
because your other statements contradict that. Ayn Rand says that true
contradictions do not exist in reality. When an apparent contradiction is
found, one should check one's premises, because at least one of them is wrong.
That's what I'm doing.
>
>> Sure you did. You've said so right here in rrap. Now you're backpedaling.

>Once again, *your* opinion, Jim. Not mine.

Of course. I'm just commenting on an apparent contradiction. Is that not allowed on rrap?

> Why do you insist on asking a
>question, then stating an objection (that was obviously going to be issued)
>to the answer? That is so weird.

No, it's a time-honored method of inquiry. It's called the Socratic method. Questions are asked, and comments made on the responses.

All I'm doing is asking simple questions and commenting on the answers, in an effort to discover people's opinions on the subject, and their reasoning. If their reasoning appears to be faulty, I point that out.

> Could you not state what you believe
>without comment from me?

Were I to state what I think, I'm pretty sure you'd have plenty of comment.

> Weird.....

Not at all. The method dates back thousands of years.
>

>
>In some cases, yeah, Jim.

Fine - we agree on something.

> I don't just "want" to do what I want to do. I *DO* it.

That's even worse. Let me rephrase:

In other words, you DO what you want to do and to (expletive deleted) with
everybody else. That sort of attitude is a prime reason for the slow erosion of
social values, and the rise of things like CC&Rs.
>
>And, if you wish me to be the erosion of social values,

Whoa there. I did NOT say YOU. I said "that attitude".

> and the
>rise of things like CC&Rs (Bwahhahhaaa), you just carry your happy little
>butt off to lala land and be happy... Because I know different.

You "know different"? How? Show us some proof.

One of the reasons for the rise of things like CC&Rs, and their widespread acceptance is the fact that many people simply don't trust their neighbors to be good neighbors, and behave in a community-spirited way. So all sorts of details are codified into deed restrictions and covenants that are practically impossible to change, so people will be contractually bound to behave in certain ways. like keeping their grass cut, their houses painted and in good repair, etc. Ask Aaron Jones - he's seen it first hand.

The erosion of social values comes directly from people's obsession with their "rights" but not the associated responsibilities. They want freedom to do what they want, but don't want to consider the effects of their actions on others. The person who says "if my behavior bothers you, that's YOUR problem" is a good example of this.

>(To use
>someone else's science, *ahem*)

Give us some proof, please.
>>
>> >This topic is not all about just you, Jim.
>>
>> It seems you want it to be all about YOU, Kim.
>
>Ah, so you agree.

You prove my point for me. Thank YOU.

>Thank you. You asked (questions) for dialogue (requiring
>answers), I responded.

Yup.

>You didn't like the answers.

I see apparent contradictions in the answers, and point them out. Also point out the effects of those answers.

> Can't say I wasn't truthful. Can't say

Have I EVER posted that someone was lying? Nope. You can check it in deja.
>
>> >There's been several people who are actually participating and many,
>> >many more who simply read.
>>
>> So? You can make your statements, but I cannot clarify them?
>

>Wait, now *YOU'RE* going to clarify my statements?

Yup. By pointing out contradictions, as noted above.

> You so funny.
>

Thank you.

>> >Your opinion.
>>
>> No, simple fact.
>
>Lookit you.You can have your opinions...I *know* different.

Then give us some proof. I have.

>(That's

   There is no faster way to guarantee the limitless life of a
thread on Usenet, than to say say "F*ck You" in Netspeak: Cite Your
Source.
```

At that instant the argument goes from topic to arguing the validity of the sources. So, experienced Netters, don't.

Personally, I invite individuals requiring statistics to look them up themselves, and verify at the same time the validity of the source.

But the real argument to be made in most cases is not in the debate of the minutiae of statistics, but in bigger pictures. Stepping back a level from the quantitative to the qualitative, produces a greater clarity of direction,and result. Often it the very numbers in an argument are the tool of obfuscation of either or both sides. Of course while the numbers never lie, the interpretations laid upon them do. Avoidance of the minutiae permits avoidance of misrepresentation of the numbers.

Recall that Clinton's strategy has always been to debate the tiniest of details in language, while avoiding discussion of the real issue of his truthfulness.

So it is with this discussion: Now involved in statistics of gang predation, instead of the issue of quality of life and liberty as the thread began.

It's an interesting thing to watch.

Just a thought.

>Does that mean that your flying accomplishments are not valid? :-)
>

Ed:

Flying radio controlled model airplanes does not require a license. The transmitters used to operate under Part 95 and required a CB license, but that requirement has been dropped; we now have about 50 channels in the 72 - 75 MHz region. Don't know all the technical details because I've been away from it for years. And whether or not my flying accomplishments are "valid" is something I could care less about. If some sort of licensing and testing for a license were necessary, I would just do whatever was necessary to pass the tests, then keyboard-slam all the lazy whiners who didn't want to learn something useful to pass the tests! Any other questions?

>It's pretty hard for a non-member of MENSA to understand, Steve. The area under the upper 2% of the bell-shaped curve does not average out to 1%.<

You may find this hard to believe, Cecil. but it does not require a MENSA-leval IQ nor a degree in statistics to understand the workings of a bell curve.

And the percentage under that 2% doesn't impress me when the other 98% of that curve pulls that 2% closer to the middle.

Not very impressive.

>I didn't make any assertions, Steve<

Yes you did.

>I said I wouldn't be surprised if the majority of gangs are white.<

That's NOT what you said, Cecil.

>I still wouldn't be surprised if the majority of gangs are white.<

That's because the scope of your experiences and knowledge are limited.

> That's NOT an assertion that the majority of gangs are white.<

Your original post was.

>Why do you make false statements?<

I haven't made one in this thread, Cecil. I HAVE called into question YOUR assertion and asked you to validate it with some sort of facts.

Why do you engineer questions so as to be insulting and misleading when you know such is not the case?

We used to call that a "cheap shot". VERY much below the character of a person alleged to be a MENSA member or a fellow of the IEEE, isn't it?

You have tried to redirect from that comment since I called you on it rather than just say "it was my opinion, not a fact". That would have been the end of it.

Instead, you embarked on what some (one) would call an "obfuscation" of the matter.

You have further tried to impress us with your education and alleged membership in MENSA as if either had anything to do with the facts or the topic at hand. Neither do.

As a matter of fact, I would expect that a person with those (alleged) credentials would know how to do a bit of research and communicate the results of same. You can't even state an opinion effectively.

"There are as many white gangs as there are black" (your initial comment) is a statement, NOT an opinion.

"In my experience..." limits the statement to just that...YOUR experience. It is fact, but limiting in nature to the limits of your experience.

Please try some accuracy, OK?

Steve

>I don't think there's a contradiction.

Of course you don't. That's why you don't like it when I point them out.

> There's a difference of opinion.

Lots of those. However everything is not just an opinion.

> If
>I say a tree *is* making noise in the woods, even if nothing is around to
>hear it; you might say it does not.

True.

>That is not a contradiction. It is a
>difference of opinion.

No, it's a contradiction. The thing to do is to check the premises - such as
"what is 'noise'?"
>>
>> All I'm doing is asking simple questions and commenting on the answers, in
>an
>> effort to discover people's opinions on the subject, and their reasoning.
>If

>I am near certain you aren't interested in other peoples' opinions.

You are completely mistaken about that. I'm greatly interested in other
people's opinions. That does not mean I always agree with them or adopt them as
my own. I only do that when another's opinion is based on sound reasoning.

I'm even more interested in relevant facts, such as those posted by
knowledgeable folks like Phil Kane.

>I am
>absolutely certain I am not interested in yours.

That's quite obvious. Your motives in posting here are quite different from
mine. Just as your motives in callsign choice are different than mine.

It's interesting to note that you want to express an opinion about practically
everything said here, and to examine the opinions, motives and actions of
others but do NOT want your opinions, motives and actions to be examined by
others. Classic double standard.

Yep, strangers, who know nothing of each other, probably would be civil and friendly to each other. It's once people learn a little of each other that personal likes and dislikes yield to those gracious types of feelings. Your "welcome" would be short-lived with most people, Larry, if you expressed yourself in the same manner as you do here in the Newsgroup. Simple fact.

>

Being interested in another person's opinions has nothing to do with whether you agree with them or "adopt" them as your own. It has to do with finding an interest in the aspect of another person's view, *without* regard to those things!! I didn't realize that we were trying to win friends and influence people. If I'd known such a thing, I'd have not let you see my *real* thoughts.

> I'm even more interested in relevant facts, such as those posted by
> knowledgeable folks like Phil Kane.
>

Then, initiate dialogue with Phil and quit wasting your time asking me your irrelevant questions.

> >I am
> >absolutely certain I am not interested in yours.
>
> That's quite obvious. Your motives in posting here are quite different
from
> mine. Just as your motives in callsign choice are different than mine.
>

There ya go....let's get right back full circle, eh? You don't like my callsign, and that has been the total motivation for your posts and dialogue here with me. You aren't interested in my opinion, you could care less. You *are* interested in maintaining a dialogue that publicizes your displeasure with my callsign. Thank you for proving my point.

> It's interesting to note that you want to express an opinion about
practically
> everything said here, and to examine the opinions, motives and actions of

>

I have no problem at all with debating opinions. I'd say the double standard is in your stating that you wish to debate, but more wish to condemn through your debate. See? It's all in perspective and opinion... :) PS--I wouldn't spend so much time being mad at someone for their choice of callsign, either. But, that's *my* perspective and *my* opinion.

Hey! That's MY bet!

"Everybody wants to get into the act" - Jimmy Durante

>I offer that by 2/28/2001 there will be more than 680,000 licensed
> Amateur Radio operators.

In the USA, as recorded by AH0A and/or the ARRL license totals. I
offered Stew something similar, but he wouldn't bite.

You get near EPA, Ed, lemme know, we'll do the lobster dinner thing
without a bet.

I'm getting hungry.

Don't you mean 12/31/1999?

Maybe. What would folks DO with such a rig that they cannot do now with
9600 baud packet?

Yeah, but the answer would be as convoluted as this one was, so I am sure it would serve no purpose. I think that your answer showed your colors just fine, Larry; I am quite content to let it stand on its own.

He is the source. He expressed an opinion. There is no supporting
source to a personal opinion. Further, he explained why he expressed
the opinion that he did.

That's right. I have never even seen a tornado except
on television. I feel left out. My daughter has lived
in Texas for only a year and has seen one.

Stating that I wouldn't be surprised if the majority of gangs
were white is the *absolute truth*. I definitely would NOT be
surprised if the majority of gangs were white. It is up to
Steve to prove that I would be surprised. So Steve, how are
you going to prove that I would be surprised?

Site the source of my statement that I wouldn't be surprised
if the majority of gangs were white? Why, my brain, of course,
which needs no validation. I thought that should be obvious.
I exist, therefore I think. Incidentally, I know of lots of
motorcycle gangs composed of law-abiding citizens. Gangs don't
necessarily have to be engaged in illegal acts. Motorcycle
magazines have advertisments eliciting members for gangs.

Yes it is, Steve.

> > That's NOT an assertion that the majority of gangs are white.<
>
> Your original post was.

I've had a computer crash and can't locate the post, Steve, so it is up to you to prove that you are not lying. I would not state that white gangs are in the majority because I do not possess that knowledge.

> >Why do you make false statements?<
>
> I haven't made one in this thread, Cecil. I HAVE called into question
> YOUR assertion and asked you to validate it with some sort of facts.

I don't recall making that assertion, Steve, and I can't find it in the past postings. I seriously doubt that it exists.

> Why do you engineer questions so as to be insulting and misleading when
> you know such is not the case?

I don't know that at all, Steve. All I have is your word and no proof. That's not enough.

> We used to call that a "cheap shot". VERY much below the character of a
> person alleged to be a MENSA member or a fellow of the IEEE, isn't it?

From my perspective, you are falsely accusing of something that I didn't say. That's what I call a cheap shot.

> "There are as many white gangs as there are black" (your initial comment)
> is a statement, NOT an opinion.

Please produce the posting, Steve. I don't remember saying that but if I did, it was certainly only an opinion. You are simply lying when you say I made that as a statement of fact. I have previously stated that unless I state something is a fact, then it is just my personal opinion.

And it is still my opinion that there are as many white gangs as there are black gangs. There are many, many law-abiding gangs that don't appear on the lists you have presented. I, myself, am a member of a white motorcycle gang which would not appear on your lists. Since whites outnumber blacks by such a large percentage, it is only logical that there would be more white gangs than black gangs. Why would a law-abiding white gang appear on any of the lists you have presented?

> Please try some accuracy, OK?

Please stop lying about what I said.

>Further, he explained why he expressed the opinion that he did.<

Several days AFTER the fact and being repeatedly asked to qualify his assertion.

> And so the argument shifts from the picture to the frame. Derailed again.<

Yes, by Cecil. But that seems to be neither here NOR there.

>Cute, but not relevant...unless you're sewing the lace on my apron<

Maybe not relevant, but close to home, judging by your response.

>Stating that I wouldn't be surprised if the majority of gangs were white is

the *absolute truth*<

In this context there would have been no question as to the "source" of your "information" or that this was an opinion, not a fact.

>I definitely would NOT be surprised if the majority of gangs were white.<

I am sure you wouldn't.

>It is up to Steve to prove that I would be surprised. So Steve, how are you going to prove that I would be surprised?<

In this context, were are expressing opinions, not attempting to determine the source of your information to support your assertions.

I am sure you would not be surprised, but the facts available would disprove it.

It's not for me to prove one way or the other, Cecil. The question was what is the source of your assertion that there are more white gangs than black.

You have since backpeddled, tried to make everyone believe that you said something else and are now stating that it was only an opinion.

You now further dilute the issue by trying to place some responsibility upon me to prove wether or not you'd be surprised about something.

Not very Mensan, is it?

Cecil:

Well, I guess I've never been in Kim's neck o' the woods, and the
issue never came up! And another thing I did notice about the Texans

I'd met is that they were very decent, modest, and moral people --
who would most likely be just as offended by Kim's call sign as
I was! In fact, I believe that they would find Kim's call sign to be
demeaning, uncouth, and very un-Texan-like! Yes, I found Texas
to be a very fine place, indeed -- but you and Kim would seem to
have a lot to answer for to the fine, decent, moral, upstanding
citizens of The Lone Star State!

Please reproduce the quote, Steve. My computer is sick and I cannot find it. I suspect I said, "There are probably more white gangs than black". And you have produced no valid evidence to prove I'm wrong. Please show me your list of law-abiding gangs. It still stands to reason that since there are so many more whites than blacks, then there would be more white gangs than black gangs. My motorcycle gang is 100% white.

> > There is no supporting source to a personal opinion.<

Hmmm. Well, I did a Lycos search on the string "Prosak," and I
found things like "Prosak dunnage bags," and some doctors by
that name, and a few other references. However, in this context,
I believe you're referring to "Prosak" as some sort of medication...
and I'm not getting anything like that.

Now, there is an anti-depressant called "Prosac," but obviously,
you wern't talking about that! Maybe if you took your Ritilin, your
spelling would improve!

Ed, how much is the BoD paying you per Post for spreading bullshit? They
might quit paying you.

Ed Hare, W1RFI the ARRL BoD propaganda machine, goofed and told a dirty
BoD secret in response to n4aox:

>Clay N4AOX <wyn@worldnet.att.net> wrote:
>
>> Lastly, encourage your BoD to send out questionaires canvasing their
>> constituents on various upcoming issues.

They don't listen to what the membership wants Clay. The BoD has already
ignored & screwed the membership over a year and a half ago in a big way.
I guess what the ham community wanted wasn't in the vested interest of the
corprate bank account.

>My director has done so on a number of occasions.
>
>Polling is NOT the best way to get member input, IMHO; issues are best
>solved by those who have more vested interest than checking off a box
>on a question they may or may not fully understand or may or may not be
>very interested in.

See Ed, what you wrote in the above paragraph proves my point. Why poll
the membership when it might go against the vested interest of the BoD.
Your screwed up BoD assholes have ignored the membership so many times I
don't know why you continue to hold elections!

Yes, Larry, there is a code test. The FCC refers to it as Element 1.
Stick around, you have much to learn. :-)

It's called circumstantial evidence. The fact that the calls weren't
issued indicates that they have been "locked-out". Would you care to
prove otherwise?

Be gentle with Ed, Larry. He's struggling with trying to balance what he
knows is right on the inside with what the ARRL and the Whiner crowd want
on the outside.

Don't give in to the Dark-side "Luke". Oops, to late, Gotta keep the BoD
happy to get a paycheck.

This wouldn't be very fair. Most post April 15th license candidates don't know who their daddy is. Of course, the League could step in and forge permission slips, and then give a membership discount to boot!

>Please reproduce the quote, Steve. My computer is sick and I cannot find it.<

It's already archived, Cecil.

>I suspect I said, "There are probably more white gangs than black".<

Grape fog clouding your memory, Cecil?

>And you have produced no valid evidence to prove I'm wrong.<

I have provided the sources of professional writings on the matter that document the problem. You hem and haw.

>Please show me your list of law-abiding gangs.<

I never said there were any, Cecil. Where did you come up with THIS one at?

>It still stands to reason that since there are so many more whites than blacks, then there would be more white gangs than black gangs.<

Oh..."stand to reason"...?

>My motorcycle gang is 100% white.<

Congratulations.

>An opinion is my official default position, you know that, and you are just being a jerk.<

Ooooh....getting a might testy, aren't we, Cecil?

You make a statement.

You are asked to provide the basis upon which you make that statement.

You then begin English grammar lessons and avoiding any direct answer.

You CLAIM to be a member of MENSA and have an IQ of 160, yet you seem to have some very significant comprehnsion problems, complicated by you inability to respond to simple questions with simple answers.

>Well, excuuuuse me, Your Royal Highnee. Guess when the Great One speaks, all us commoners are supposed to step and fetch'it.<

Childish, Cecil...VERRRRRRY childish.

The nation that is ready to fight in peacetime is less likely to HAVE to fight in wartime......(Author unknown, but he probably wasn't a politician!)

Oh, then you must have a list of all the law-abiding gangs.
Would you please publish that reference?

> Well, Cecil, I am not the one making assertions they won't back up.

Of course you are, Steve. You are making assertions about
something I don't think I said. What if I said you told
me to "Eat $hit!". Would that make the assertion true?

>   As for your computer crash, Deja is not archived on your system.

What was the date and title of the thread?

>   I didn't make any assertions requiring any validation.

So Your Royal Highnee can just assert that someone is
wrong without any proof whatsoever. I think I understand.

> You didn't state there was more white gangs than black...you said there
> were as many. And finally you admit that you do not have any facts.

```
Ah, but I have logic on my side. There are approximately ten
times as many white people as black people in the US. You have
admitted that you have no valid references for the number of
law-abiding gangs. Until you present some proof otherwise, I
will continue believing in probability.

Well, if you don't know how many law-abiding gangs there
are, you cannot possibly know whether there are more
black gangs than white gangs.

>   You make a statement.
>   You are asked to provide the basis upon which you make that statement.

Sorry that I upset Your Royal Highnee by not reacting
fast enough for you. I have been dead in the water and
missed half the postings because the installation program
for my new modem wiped out most of my drivers.

Ahhh, don't blame it on defenseless creatures. Humans are much better known for their tendancy to become irate and irrational in reaction to words than are reptiles.

Did you see the Star Trek Next Generation episode where Jordie turned into a reptile-like creature? Quite thought provoking.

In this whole discussion of what offends and who has the responsibility to decide, I've started thinking about all the possible combinations of prefixes, numerals, and suffixes that might form suggestive phrases, might be "phonetic-ed" into suggestive phrases, ..., and so on.

1. I always get a twinge when I hear/read someone saying that such-and-such is obviously offensive, obviously pornographic, obviously not appropriate for children.

2. I'm reminded of the wonderful George Carlin "Seven Words" routine. Would I want my granddaughter to hear that performance? No. But there are many other words that are regularly overheard on the streets, in elevators, and even (heaven forbid) in the parking lots of churches that are just as offensive and just as awkward to explain when she asks about them. She will hear will hear each of those words, and many of the others that I find upsetting, in the course of her life. She will have the loving instructional support of her parents, both sets of grand parents, her great grand parents, and even a great-great grandmother to help her understand not only the context and the inappropriateness of the language, but also be helped to examine some of the issues that come out of hearing those words.

3. Some of the most vocal folks when it comes to controling what others say or do are the same folks who resent anyone trying to control what they say or do. Don't tell me whether I can or can't have guns. Don't tell me that I have to wear a motorcycle helmet. But let me tell you what you can say, let me tell you what you can do behind closed doors in the privacy of your own home.

Life's too short.

>Winblows...err, Windows '98 machine

My condolences.....

>that I have to use because the cable company refuses to support Linux,

Does not the cableco deliver a TCP/IP connection on a RJ-45 out of their bridge and cannot you reach their IP address from your TCP/IP applications such as a browser running under linux??

What is there to "support"?

Alternatibely, will the linux Win Emulator programs ("wine" or equivalent) not run any Win application that the cableco insist on?

I run into this "we don't support your system" quite often because I run IBM's OS/2 Warp as my OS of choice.

Lastly, LinkSys makes a series of inexpensive 4-port-LAN routers which effectiovely isolate the TCP/IP internet connection from whatever operating system you are running. I use the model that interfaces with a dial-up modem and our son uses the model that interfaces with a TCP/IP RJ45 connection such as Cable Modem or DSL. Your computer communicates with the router. the router setup is through a browser of your choice, and the router communicates with the outside world. Some of them even include a real firewall. Check out <www.linksys.com>.

In my experiences both as a lawyer representing individual
owners, and as a member and sometime director of a HOA, the

HOAs try it themselves first, and then when their lawyer has to
get into the situation, the matter which could have been solved
easily is alreadfy screwed up far beyond recognition.

Some Hams couldn't believe that the ARRL would support the proposals
that were offered to the NPRM. BUT they did. Now that is history.
What is next? What will the ARRL do in the future when they find that

there are fewer new licensed hams than they had hoped for? I dunno. How do you know? How can you speak with any certainty about the future?

I'll name all of the present ARRL stafff who have stated that Ham Radio is not a technical hobby. This includes the ARRL president and some of the VPs. Et tu Ed?

Heck I can't predict exact dates. What do you think I am...Nostrodamus??? I can only guess where the present trends may lead if there isn't some serious back-lash to restore Hamdom to its defined Basis and Purpose. I can't talk with any certainty. I can only say that the hobby is showing symptoms of being sick...I can't be certain if it will get sicker or will recover and get back to being its old self again.

You got it! FERGET MORSE. Just think about MODERN TECHNOLOGIES.

> > As a result of this trend half of the Real Hams
> > will be silent keys in a few years.
>
> Do you really think that the changes in the Morse code testing will
increase
> the death rate of Amateurs?

No but the old incentives that encouraged techie types to be Hams are all but gone because the leadership does not belive that Ham Radio should be promoted as PRIMARILY A TECHNICAL HOBBY.   Hams themselves do not believe that many of them can learn to build their own equipment and experiment or learn enough technology to keep up with the changing state of the art. This and my entire post has absolutely nothing to do with any Morse code requirements or a complete lack of them.

> > They can not be Real Hams if they lose innovative

Most
> of the pioneering I can envision does not include OOK CW.

Whats MORSE got to do with it?   Ham Radio can be a Technical Hobby with or without Morse. We are talking about technical dumbing down and technical obsolesence NOT MORSE CODE.   Since the development of radiotelephone technology there have always been Hams who are not especially interested in operating CW. At one time such Hams were challenged by the Class A license exam...which became the Advanced class. It was meant to increase the Ham's knowledge of radiotelephony at the time when it was still a modern development.
Today we need more license classes to encourage those who are inclined to pursue and learn about the many new communication techniques that can be utilized by the progressive Hams of the future.

A few questions on the Extra class exam are not going to do it.

> > Sadly there will be no higher Ham classes to be promoted to.
>
> I guess that hams will have to promote themselves with
accomplishments, much
> like Larry Roll's learning to fly model R/C airplanes.

Yep...Dumbo the elephant could fly too (according to Disney), as long as he carried Jimminy Cricket and a magic feather. I would rather think that any self made flying model builder would have to learn some real aeronautical engineering techniolgy principals. I suspect Larry did if he designs his own R/C planes and doesn't buy them already finished from Japan. IMHO R/C Model Airplanes as a hobby IS a TECHNICAL HOBBY if the R/C hobbiest builds his or her own planes...If not, it is just some level of playing with expensive toys, which any kid can do if his daddy gives him the money required.

Yep individuals can be self-taught. Individuals can be hobby communicators. Individuals can be experinmenters. Groups of Individuals can "form a cadre of technical experts", who are at home with the modern state of the art. The question is - Do those individuals now see any reason to want to join the ranks of "dumbed down" hams, whose leaders opine that Ham radio is not to be a Technical Hobby?
Do those individuals believe that they can best spend their time using media which requires no Ham license and pioneering in the technology of those new media?

> > Sadly there will be no Ham Radio.
>
> Another unprovable assertation. However, we can put a small wager on its
> being around at the end of 2009; would that be a reasonable time frame over
> which to speculate?

Nope - It can linger on for another 50 years, if the FCC permits it to. It may simply slowly fade away, like MacArthur's prioverbial "Old Soldiers". During the fade out...The remaining few Hams may be thought of as Old Codgers who are not willing to face any new technologies unless it is spun off from the commercial rejects of Chinese mass production. This I admit is a worse case scenario...but if present attitudes prevail this is all that we can reasonably expect.
>
> 73,
> Ed Hare, W1RFI
>

Please don't let Ham Radio become Citizen's Multi-Band (CMB)!
73,
Hams need MORE license classes to make Ham Radio a modern TECHNICAL HOBBY,
Bob Wex w2ilp (Insure License Potential)

The Ham of the future will not need the Morse code
but if he thinks that he will not need to learn
communication technology he will no longer be a Ham.
He will become a CMBer.
--w2ilp--

The individual Ham is defined as a Licensed Amateur
Radio Operator...BUT...Hams, as a group, must generally
conform to the same BASIS and PURPOSE that has been
consistently listed in Part 97. If they can not..then
Ham Radio must be redefined as CMB.

This reminds me of a story that I often tell. I once asked my college Communications class Professsor, "Why do I have to learn Fourier Transforms? I think that I could design an entire communications system without them." His answer was not very technical. He said "If your daddy was rich, you wouldn't have to learn anything."

Like you, I used to berate people who made spelling errors, especially WA8ULX, who types as if he is wearing boxing gloves.

However, I came to realize that I make my share of spelling mistakes and typos as well. I proofread, but I'm only human, so on occasion there may be a typo or error that slips by. In this case, I relied on someone else's spelling in the hope that they where correct. Sometimes I'm wrong. Like I said, I'm only human.

I also realized that it's a very weak-minded individual who feels they have to resort to pointing out spelling errors. I don't do that anymore, even with someone who can't even type an intelligent sentence past a second grade level.

Here on the newsgroup, I described a couple "downsides" that I have encountered while operating CW. One related to trying to copy a bad fist (I heard a guy yesterday, sending CQ FISB :-), and the other involved two CW stations sending simultaneously on exactly the same frequency. Ed mentioned that he would be able to copy both, simulataneously if they were separated by 25 HZ or so. I though that was amazing. Maybe you have me in your killfile and you didn't see that exchange.

Dear Dr. Marc...

Let me remind you that a newsgroup is supposed to be a two [or more]-way discussion group and not a broadcasting outlet. If you want to broadcast then I suggest that you might look into setting up a web-site...BUT if you want to discuss Ham Policy then be ready to monitor for those who might want to reply to you - with the entire group following the thread, if it is of interest to them. Besides if you monitor the thread you might see that you have sent the same message a number of times and might learn more about NGs. Sometimes I hit the "Send (no preview)" button twice by mistake myself...BUT even I don't send the same message as often as you did. I have been criticised for echoing here and I can understand that this practice is frowned on by experienced NGers. NGs are sort of like the Ham Bands. You can't broadcast or talk to yourself without listening on them....At any rate it is not considered polite to do so on either media. There is no official law against it in a NG but there is on the Ham bands for obvious reasons.

Just a humble suggestion that could lead to your using better psychological NG judgement. At any rate I don't think that you would want to give the impression that you would only monitor a NG that had only PhD posters in it...or would you?

I'll send this message to you via e-mail. I won't send it by snail mail because I don't want to buy any new postage stamps unless they commemorate Ham Radio.

I will be monitoring this NG.
73 you all,
Bob Wex w2ilp (Itterated Letter Postage?)
BSEE   MSEd   (Not a PhD)

Hey Larry, if you think that just because they don't use it in front of
you means that they haven't heard it, or used it among their friends,
you are seriously deluding yourself. What they have learned is that
using bad language in front of adults is unacceptable.

Do you really believe this, Cecil? Of course you can identify a reasonably confident number of one demographics against another.

And "law abiding gangs"...?!?!

Forget it, Cecil.

I thought you were on of the FEW posters of some character here...Guess you're a "character" alright.

Sorry to waste your time. Back to your bottle.

Hey Bob,

Speak for yourself. Okay? I don't think there's pennance involved for posting to r.r.a.p. He posted something interesting to read. Somewhat of a novelty here, actually. And he asked for help for what I think is a good sounding cause. It wasn't an anonymous post, which is certainly a plus. It's just that the guy has better things to do than participate in an argument clinic (TM). Good for him!

Sure, I guess so. As long as you provide an explanation, other than
lockout, for why all the others weren't issued.

> The fact that a call isn't issued is not evidence of a lock-out on that call -
> it could just as easily be abandoned within a month of issuance.....

It's a little soon for KF6TIT to have already disappeared from the
database - even if it had been "abandoned". Usually the database
indicates that a new call was issued in the event someone applied for a
change - a least for a few months. But QRZ CD's will tell the story.

Records don't disappear from them just because KF6TIT applies for a new call.

By the way, how does one go about abandoning his callsign?

I've been in Texas for 21 years. Only once I've seen a teeny rope tornado over in Ft. Worth. And when the season is hot around here (about five counties), I participate in storm spotting, then chasing into other counties. I have, though, seen the transformers blowing at night.

C'mon, Steve. Fer cryin' out loud. Everyone here is stating opinions.
Does each line of a post need to begin with, "In my opinion" for your
benefit? Good grief!!!!!!!!!!

An excellent post Clay! The only trouble is that it has been my
experience that questionaires that get sent to ARRL members are very
poorly worded and are designed to get only the results that the
Directors want.
Often there is no way to logically select a logical opinion by checking
any box and no room to write comments that can't get counted and won't
get read anyway.

BTW The ARRL isn't always wrong. They often do listen to members. Your
comments will be taken seriously if you contact ARRL officers at
various levels. My Division Director had proposed changing the name of
the ARRL. When I wrote saying that IMHO the name should remain the
same, and presenting lots of good reasons, he just continued to
disagree. I then wrote to many other ARRL officers and the name
changing proposal got defeated at an ARRL committee meeting (at least
for the time being). I dunno for sure if it was may opinion that was
considered but in all fairness they might have been thinking about some
of my comments.

Well, 7 weeks, less two days, and I'm still waiting - yet someone else at the same test session had his upgrade granted by the FCC on May 3rd. The VE team didn't report any problems, and the VEC hasn't responded to either my phone or e-mail messages from last week - to see if my paperwork was lost. Oh, well.

[PS: I used a GLAARG group.]

> prove otherwise?

I just may do that. I'll look for all suffixes, excluding vanity calls, issued in the past 5 years. If I can find at least one non-vanity call of each suffix and post that call here, will that satisfy you?

I do note that 2x3's with an "X" following the digit are not amateur calls (they are assigned to the experimental licenses), and calls with Q-Codes as the suffix (QRA-QUZ), plus "SOS" are skipped, but the original question is seeking "offensive" suffixes (such as "FUX", etc.); not those which are documented to be skipped.

The fact that a call isn't issued is not evidence of a lock-out on that call - it could just as easily be abandoned within a month of issuance.....

Ed:

OK, let's leave you out of this for a bit. If you know one person who works at ARRL HQ, who is a licensed amateur, and is in complete disagreement with the concept of restructuring, who is it? If you can't or won't answer for privacy reasons, ask that person if he/she would kindly post to this newsgroup voluntarily. I'll bet you a lobster dinner you can't find anyone that is willing to do that. I firmly believe that anyone who works for ARRL HQ is required to tow a strictly Pro-Restructuring line -- and cannot, for fear of jeopardizing their employment, speak out against it in any way. And I hereby state to all in this newsgroup that it is highly unlikely that we'll ever see that happen!

We all live in a democracy, but very few of us work in one. It is perfectly normal, natural, and even legal for corporations or organizations to require their employees and/or volunteer staff to never speak out with an opinion which is contrary to the goals of that organization. I have absolutely no doubt that ARRL HQ exacts this kind of speech control, if not thought control, over it's employees and volunteer staff. If anyone at ARRL HQ is in absolute total, unqualified disagreement with Restructuring, I'm sure a trap door has been installed under his chair -- ready to send him into a pit of hungry alligators the minute he opens his mouth!

  Oh so what about Kim's call sign, are all of you that thin skinned
and upset over here call letters? It does not bother me one bit! In
fact if I heared her on the air I would definitely try to contact her.
For some one with a call sign like that I know that person would be
full of life. The rest of you people have to lighten up a little and
learn to enjoy life.

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any amateur topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

X-Mimeole: Produced By Microsoft MimeOLE V5.00.2919.6600

Didn't try and I don't want to better places to spend my time and money. Who needs a damn test to operate a CONSUMER oriented electrical communication device in the 21st Century? I use a cellphone, GPS receiver, cordless phones, computers, TV, VCR (I can actually set it too :)), High-end Home Stereo remote, FRS devices, CB radio, Palm Pilot , RC cars and boats and even a microwave oven and I don't need a damn license for those. What makes HAM gear soooo complicated I need to pass a test and be TAXED on it by the FCC?

By the way Jim who the hell are you gonna MORSE with? Aliens, Russian SPY ships, the Space Shuttle, clandestine operatives so deep under cover that they can't afford voice transmission equipment (poor bastards). So, who the HELL do you Morse too in the 21st century??? MORSE is DEAD. dot dot dot dash dash dash dot dot blah blah blah HA HA HA :) :) :) You guys kill me.

Man you guys crack me up get with the times folks your HAM hobby is as OBSOLETE as my VIC-20 and C-64 are to 1Ghz CPU's. Let the FCC use the space for something more useful, at least more interesting. Hell I'd buy a GMRS unit once the FCC re-allocates frequencies, manufactures mass produce (a la FRS), drop the price and licensing bullshit. I can see a uses for a 5-10 mile communication device on UHF, FRS is neat but limited. Technology WILL not stand still for long, I would love said GMRS with built in GPS, terrain mapping database, hell throw a cellphone , scanner, personal organizer and MP3 in there too, sell for $300.00 - 500.00 sweet. The future looks good to me at least.

Well, if you spent a little time learning about ham radio, you would be able to answer your own question. For one thing, unlike the other electronic devices you described, ham radio gives you the capability to broadcast on multiple radio bands, using considerable output power, and using several different operating modes. A computer, home stereo, tv, cell phone, CB radio, or other similar devices, do not have any of those capabilities.

> Man you guys crack me up get with
> the times folks your HAM hobby is as
> OBSOLETE as my VIC-20 and C-64 are
> to 1Ghz CPU's. <snip>

There is a greater demand for radio, and ham radio, today then there has ever been. The list of devices using radio, and agencies using radio, has grown considerably, and will continue to grow in the future. Therefore, the need for people with at least basic radio skills is also growing.

Definitions, too. The point is that it's not just an opinion question.

In fact, the "tree falls in a forest" thing has no opinion component at all if
it's done logically.
>
>> >> All I'm doing is asking simple questions and commenting on the answers,
>in an
>> >> effort to discover people's opinions on the subject, and their

>> >> their reasoning appears to be faulty, I point that out.
>> >>
>And, that, dear Jim, is your opinion.

Not just that. Logic and reasoning exist independently of opinion. A statement
may be true or false. An opinion may be valid or invalid.

For example, a person may claim that Blatz beer is the best in the world.
That's an opinion, of course. But unless that person has actually tried every
beer in the world, it's an invalid opinion. Or perhaps you'd prefer the phrase
"unsupported by facts or experience". In either case, someone can logically
argue that Blatz is NOT the best beer in the world, and the claimant doesn't
have a logical leg to stand on.

But if a person claims that Blatz beer is the best that person has ever tried,
that opinion is valid. Or perhaps you'd prefer the phrase "supported by facts
or experience". Either way, there isn't much to argue against.

>But, you accept it as fact for yourself.

No, I present it as fact. Period.
>> >

>
>There ya go....let's get right back full circle, eh?

> You don't like my callsign,

I don't think callsigns of that particular type help the ARS. I think the ARS
would be better off if all hams voluntarily avoided them.

>and that has been the total motivation for your posts and dialogue
>here with me.

Nope. You're totally mistaken about that.

>You aren't interested in my opinion, you could care less.

Not true at all. I'm very interested in your opinion. See below.

>You *are* interested in maintaining a dialogue that publicizes your
>displeasure with my callsign.

Have I said, before this post, whether I "like" or "dislike" your call? Nope.

> Thank you for proving my point.

Thank you for proving mine.

You see, when you first showed up on this NG, I thought that the callsign had to be fake - a joke. Lots of anonymous posters here, as you can see. So I checked out qrz.com, and found out it was for real! Did some paging through the callbooks, and found that there had been a W6 version since at least 1979. So the FCC would issue such a call - but apparently only on request, because there exist no others.

Now the whole vanity call thing goes back decades. I've had this call since 1977, but I got it at random, because in that timeframe the FCC didn't let you pick and choose. Since then, the vanity call program has been greatly expanded, and lots of folks have gotten all sorts of calls based on their initials, names, etc. Usually they are strictly G-rated.

But your suffix doesn't fit the G rating. You admit that when you say you won't say the word on the air.

So I began to wonder what sort of thought process would lead someone to request such a call. You say it was a dare, because a friend didn't believe the FCC would issue such a call. Logically, all that was needed to win that dare was to look in any callbook or database since 1979 and see the W6 version. If even one such call exists, then obviously the FCC would issue such calls, somehow.

All of the dialogue has been to try to figure out what sort of though process would lead someone to request and hold such a callsign, since it is obviously offensive to a good percentage of the amateur radio community. Your responses have convinced me that you think that since YOU don't find your callsign offensive, there's no reason for you not to have it. Regardless of anyone else's opinion, how it looks to nonhams, etc. In other words, if it makes Kim happy, it's gotta be good.

What have I "condemned"? Nothing.

> See? It's all in perspective and opinion...

No, it isn't. The idea that all opinions, value systems and viewpoints are equally valid is one of the great mistakes of our time.

>:) PS--I wouldn't spend so much time being mad at someone for their choice
>of callsign, either.

Nor would I. I'm not angry at all. You appear to be, though.

Only about 40 miles from here. btw, this new QTH needs a name. Old place (in Upper Darby, former home of B&W) was called RadioTelegraph Hill. This place (Radnor Township, within earshot of the Devon Horse Show) is still nameless after 7 months. Perhaps South Selden Hill? Or maybe Southgate Manor?

>WA6VSE said it was the best-tasting lobster he has had in a while. :-)

Then he's never been to Maine, where the good ones are. Like Buffalo (actually, Tonawanda) is the place for wings. Amd beef on a weck.

I wish I could get a piece of that action. Heck, the backlog of the past six weeks alone will bust 680K. And the trickledown effect hasn't really kicked in yet.

The end user rig is only one of many problems to be solved in order to have what he proposes.

>But agreeing in principle doesn't mean that I think
>we need to predict the end-of-amateur-radio-as we know it; I think the point
>that Amateur Radio needs to encompass more technically than it does right
>now stands well on its own.

Agreed! The question is - how to get there? The QST/QEX split of years ago puts most of the serious tech stuff in QEX. That's not a bad thing - one of the chronic complaints about QST before the QEX days was "it's too technical".

OK - but all that does is duplicate what they probably have already. And such a dataradio is only a small part of what's needed - there has to be some sort of gateway to Usenet in order to have a working system.

>At 9600bps,
>it is too slow. Dialup Internet didn't really start to boom
>until folks were able to get to 28.8Kbps. And nowadays
>56Kbps(with typical connections at about 48Kbps) is considered

Faster is better, sure. But millions of folks are still happily running 28.8 or even 14.4, because of phoneline limitations. For plain text, the difference is not THAT great. Where things bog down is with graphics and scripts and stuff like that, all being downloaded at once.

>
>At 115-500Kbps, we would actually leap-frog the dialup folks and
>be competitive with the DSL/cable modem crowd.

For a while. Fiber optics - that's the future. Soon the term "cable" will be as much a misnomer as "cut a tape". Many cable TV operations are already partly fiber.

>Note that I'm
>talking competitive in the sense of access speed only. Our
>data content would be different - I think that it would actually
>be superior to the untamed Internet, in many ways(no
>advertising(except ham gear!), no profanity,
>technically-oriented).

All of which is prohibited by law, of course. But there's the hitch: What you will get is not internet access, nor the web, nor even usenet or plain old email. Right there, a lot of the audience disappears. Worse, though, is the need for hams to build and maintain the backbone network. That's the "who'll bell the cat" problem. With no commercial content, there's no revenue generation to fund anything.

Fact is, a highspeed national digital network using UHF ham radio has been technically possible for at least 15-18 years. The problem is cost. How many nodes would such a network need, and who is going to build, maintain and coordinate them?

The answer, I think, is some sort of universal digital protocol and network that can do voice, data, text, image, whatever, so that the same network can handle amateur email, realtime voice and text, newsgroups like this one, and lots more. But that's a BIG order. Takes a lot more than a cheap dataradio to do that one.

Sounds reasonable - but how can you tell whether a call was a vanity
issue or a routine, next-in-alphabetical order issue?
>

Agreed.
>
> The fact that a call isn't issued is not evidence of a lock-out on that call -
> it could just as easily be abandoned within a month of issuance.....
>
Possibly. But there's a third possibility: The FCC may have set up the

system so that certain calls and suffixes will not be routinely issued because the vast majority of recipients may not like them (e.g., AH0LE, WH0RE). However, they will be issued if specifically requested as vanity calls. The suffix debated here at interminable length is obviously not routinely issued, because only the W6, W5 and K5 versions have been know to exist in the past 21 years - and the owner of the K5 version traded it for another K5 call. The W5 version is a recent vanity issue, but the W6 version is listed as far back as 1979 - and it may go back even farther. (1979 was the oldest callbook I had, and I just sold it).

Oddly enough, the suffix "LID" has been issued routinely in the past. Also, I have heard that the FCC will assign a new call without charge if a licensee thinks their sequentially issued callsign to be objectionable (for a reasonable cause).

> should be several times that many dying per month.
>

678,000, give or take a few.

Let's do some really crude estimates. Let's say the "average" ham
"career" lasts 50 years, and that almost all hams keep their licenses
till they pass away. (Note the word "average"). Then we can expect 2%
of the ARS to expire per year, or 0.167% per month. 0.167% of 678,000
is about 1132 per month.

> Or did you just mean ARRL members? That number still sounds
> too low.

Correct! Assuming 1 in 4 US hams is an ARRL member, we get 283 per
month.
>
> OTOH, if hams only die at the rate of 55/month we could promote
> amateur radio just on its health benefits. :-)
>

Yup!

One thing I've not seen yet is a breakdown of ARS licensees by age, and
comparisons with the US population as a whole. We see single number
"average age" stats, but they are meaningless without more detail. And
a correction factor must be included to allow for the fact that there
are few hams under the age of about 10.

>
> > The question asked time and again is, "Why are there no *young*
newcomers
> to
> > ham radio?" The answer is quite simple: elitism.

Elitism may be only a part of it. The largest so called generation "gap" occurred during the 60s when the youth of the USA took on a new culture that was opposed to the Viet Nam war and opposed to a lot of the conservative thinking of the older generation who fought in WW2. The result was the development of rebellous anti-government youth who sometimes went as far as becoming part of the druggie scene. Their rationalization for their anti-social behavior was based at least in part by their discovery of government hypocracy such as the Watergate affair. Hams have (inspite of some bigoted wizards) always represented a conservative group which is patriotic and loyal to our government. This has led to the continuation of what started as a "generation gap". IMHO that gap is getting bigger as time goes on. The gap is recognizable in the types of music and sadistic entertainmemt that polarizes the young vs the old culture.   Unfortunately Ham Radio is seen, even by many Hams, as a part of the OLD CULTURE. This in itself makes it very hard to sell to the younger generation. on the other hand the freedom of speech that we see on the internet and even in this NG is not typical of trasditional Ham Radio content. Most Hams do not

want to discuss sex, religion or politics over the air. (These
subjects are taboo since Ham Radio content must be G rated)...BUT some
will in NGs. This leaves Ham Radio a dry and sterile field as far as
most youths are concerned. In short it offers no exciting surprises as
far as its content goes.

IMHO Hams who are technically innovative do have some qualities to
feel "elite" about...just as hacker gurus may. If Hams can feel that
Ham Radio has some bragging value then there can be no motive for most
people to become Hams.
> "I don't practice what I preach because I'm not the kind of person I'm

A very good quote. It applies to me as well.

> > Second, it annihilates the appeal of the group's philosophy, as no
> > one likes to be talked down to. Third, it turns the group into
general
> > assholes, making them snobby, confrontatinal, and unlikeable.

Yep...You can't talk down to a non-captive audience for long. Captive
audiences include only those in required school classes, court rooms,
military posts and unfortunate enough to be inside of a moving vehicle
where a loquatious speaker is propounding. Peopl;e and especially

youths don't want to be talked down to...even by their own parents.
BUT
IMHO you don't have to talk down or be talked down to to be an ass-hole.
Ass-holeism comes with a much larger field of territory.

Again we see the poster that seeks to analyze society being labelled a
Nazi. In my cast I would probably get labled a Leftist for agreeing
about the same social conditions.
> > My
> > idea of ham radio would be a wide range of individuals discussing

contact)
I would suggest that you take an IQ test and join Mensa. Then you
could talk to intelligent people via Mensan NGs. Unfortunately you
might find that these is little difference in the responses that you
will get from the Mensans and the folks in this ham policy NG. A lot
of smart people don't know how to communicate productively. Humans
tend to do things and say things to satisfy their own egos when they
are doing things that don't involve a monetary profit motive.. This is
basic human nature.

>
> 97.1 does not prohibit these discussions. But talk about something
the
> least bit controversial, and the jammers will pile on. It's not just
ham
> radio.
Now you can understand my point of view. I believe that Ham Radio
should be primarily a TECHNICAL HOBBY. It has always been accepted

that Hams can discuss radio technology, their equipment, antennas, etc. If we go to far in thinking that Hams like CBers and NG posters can be permitted to discuss anything that they feel like we are changing a basic Ham tradition that has set Hams apart from other communications users in the past and IMHO must continue to do so...Not just so Hams can feel elite but so they can learn technology and pioneer in modern innovation which can approach the state of the art.

>Intolerance of other views is on the upswing everywhere. I dare say

AGREED!!!

> Donating an FT-1000 to Unclaimed Mysteries is good first step, IMHO.
>
> > Until a redefining of the basis
> > and purpose

There can never be a basis and purpose to redefine our basis and
purpose. If you analyze which paragraphs need to be changed you can
only see an elimination of those very paragraphs with nothing real to
replace them...and thus an end to what are defined as the very basic
values of Ham Radio.

> happens, and until the poisonous elitism is purged, the appeal

You can do that using the December 1996 data, but the FCC hasn't been
collecting or publishing birth dates since that time so a breakdown by
age of the current ham population isn't readily available.

I must appoligize to all for my above post.  Jim is correct to call me
a hyp[ocrite.  I got ticked off when I read Dr. Marc's statement that
he would not monitor this NG.  I saw this as a "talk down" to the
posters of this group. I wondered if Dr. Marc only intended to monitor
groups of certified PhDs.  Apparently he did monitor this NG, as he did
reply to others who commented in this thread.  I also though that he
seemed to be an elitist who flashed his PhPsyc at us even in the
subject box, when IMHO his call-sign alone would do as far as this NG
is primarily concerned.  I responded with my BSEE and MSEd, with a
competive defensive motive...but it was hypocritical to do so...and I
am sure that others might see me as a phony elitist.  I would prefer
that they think of me as just another ham...(even tho being a Ham these
days might be like being an honorary idiot).
    I won't send Dr. Marc an e-mail message because I suspect that he
IS monitoring this group in spite of his original disclaimer.

```

>C'mon, Steve. Fer cryin' out loud. Everyone here is stating opinions. Does each line of a post need to begin with, "In my opinion" for your benefit? Good grief!!!!!!!!!!<

Nothing has to be done "for (my) benefit", Kim, but when someone asks you for the source of your information on something you have stated, then you should either be able to say (or words to this effect) "It was just my opinion..." or "I got my information from..."

Cecil, like one or two others here, has gone to great lengths to impress us with, among other things, his IQ, professional associations and MENSA membership.

Anyone who TRULY has all three of those in his/her CV OUGHT to know how to formulate a sentence in such a way as to indicate that the information is based on a known fact or published data, or just an opinion with no verifiable facts.

Instead, Cecil went on the Internet version of a Texas Two-step around answering my inquiry as to his source of "facts". He finally admitted that this was just his opinion, based on nothing but a very limited scope of personal experience...ie his "all white motorcycle gang".

I don't buy into this concept that "just because" this is USENET, any abortion of the English language should be tolerated. We all were (supposed) to hae received a minimal education, and part of that education was to ensure that we can intercommunicate effectively.

Futhermore, I don't buy YOUR assertion that everyone here is just "stating opinions". The manner in which any given sentence is formulated determine wether the sentence is an opinion or stated as a given fact. Cecil would have us beleive that HIS opinions ARE fact.

Cecil likes to make assertions that he would like for us to accept as fact, yet is unwilling to substantiate those assertions. THAT'S propaganda!

We were all (supposedly) educated to a minimal level of comprehension of the English language. Those basic skills are essential so that we can all speak from a common frame of reference.

Ever read George Orwell's "1984", Kim ? If not, you ought to some time. It will give you a whole new outlook on the Internet in general and USENET in particular.

Perhaps THEN you might understand my penchant for SOME standards of grammar and structure.

Steve

With the way the market is now it is a good time to invest into communications companies... Good luck and hope you are enjoying retirement.

I certainly respect all that the US and allied fighting forces did to preserve our nation during WW2. There is nobody with any manners who does not feel the same way....
BUT
The educated youth of today might not believe all that is said of the gallent WW2 heros. After all kids are now being taught: -
1) That Columbus didn't discover America.
2) That Washington didn't cross the Delaware.

3) That Lincoln didn't intend to free the slaves.
4) That Oswald didn't act alone.
5) That Sarnoff didn't work the Titanic.

People today are skeptical about anything...ever Ham Radio. People do need to see the bloody bandages of WW2, if only in museums, to prove that wars are hell.

It is very bad manners to show disrespect for the heros of the past...but unfortunately when the accurate facts get reported, people now tend to get skeptical about everything...even our President's fidelity....which IMHO shows that people have no respect. Yes... People with bad manners show no respect and people who show no respect have bad manners.

>> T.L. Bryant <tlbryant@my-deja.com> took another step toward USENET history by writing in part:
>> > The question asked time and again is, "Why are there no *young* newcomers to ham radio?" The answer is quite simple: elitism.<<

From this, Bob delved into a lengthy dissertation on the generation gap.

Neither one of you are correct.

The lack of "youth" in Amateur Radio is a simple matter of lack of application and a proliferation of other distractions.

We have to "accentuate the positive" and make it more appealing. The days of being able to simply infect a youngster with our ability to communicate globally with a crystal set and spark gap have passed.

Kids today need challenges, and those challenges must have some sort of practical application.

Thre's no "elitism" or "generation gap" to it. It's ALWAYS been that way. We just seem to want to forget that every so often and we wind up reinventing the wheel.

So much wasted time when there's no time to waste at all.

But there ARE young newcomers to ham radio. A few weeks ago, a bunch of
local hams had dinner together to plan for FD, and among us was an 11
year old Tech. I'm also well acquainted with a local Extra who is 14,
and has several years' experience. And they are just the ones I know
well.

What rules would it violate? Obviously some things are off limits, but
not all.

> These people can't even see past a rulebook to see that amateur radio
has
> become stagnant.

Not to me!

> But, no. The majority of hams today are old and/or obese, white, males

Let's hold it right there a moment. First off, you're making a broad
generalization without any data being presented.

"old" - well, I'm 46. To a teenager, I'm old. To an octagenarian, I'm young. How old are YOU? And why does age matter so much? How old does a person have to be in order to be "old"?

"obese" - Most American adults are overweight, according to various studies. Obese is defined as being more than a certain percentage overweight (I can't recall the exact number offhand). Why should a person's value be tied to their body mass index, as you seem to be doing?

btw, I go 215 right now, at 6' 3". That's too heavy - I'm working towards 180.

> who have
> nothing better to do than talk about the "good 'ol days", their
health
> problems, and the weather.

Not the hams I know. All sorts of great stuff on the local repeaters and the CW bands.
>
> Based on these facts, you can see that the new license structure
isn't going to
> save ham radio.

Except that your "facts" turn out to be false, or irrelevant.

> A lower code test requirement isn't going to save ham radio.

So we should have left it alone? I don't think so! At least 75% of commenters to the NPRM favored the 5 wpm General license.

> Only a change of attitude will save ham radio.

"Save" it from what?

>Until a redefining of the basis
> and purpose happens,

How's that going to happen?

> and until the poisonous elitism is purged, the appeal of
> the internet for the free and open exchange of ideas will continue to
grow, and
> interest in ham radio will continue to dwindle until it is like the
dead
> languages of Europe: Still there for the curious, but of no common
use.

Sorry, Tom, but the facts speak otherwise.

For one thing, if you look at the history of ham radio (at least in the

USA), you'll see that it has grown rapidly in some eras and slowly or not at all in others. Rapid growth before and immediately after WW1 - slow growth in the 1920s - a veritable explosion in the early '30s (almost triple the number of hams in less than 5 years) - slow growth through the rest of the '30s, then a decline during WW2.

Fast growth from the ned of WW2 to 1963, then no growth for almost a decade. Steady growth from the early '70s to the late '80s, then very slow growth since then.

US license figures: (approximate)
19K hams in 1929
46K hams in 1935
60K hams in 1946
100K hams in 1951
250K hams in 1963
350K hams in 1979
550K hams in 1990
678K hams in 2000

What downward trend?

I've never been one to go in too much for govt. conspiracy theories;
although they do exist - Gulf of Tonkin, Watergate, Contragate...

But, in my experience, government(and the government tax burden) always
attempts to grow and rarely shrinks.  Generally, less
government(especially less centralized government) is better government.

The only rub here is if the provider is using PPPoE. It that case, you'll need to find out what the status is of the PPPoE stuff for Linux.

Of course, if you need more than one computer to share the connection (and, in my case support 3 different OSes at home), then I point you to the LinkSys Cable Modem / DSL router. It's wonderful peice of hardware.

In recent years, the American culture(and media) has continally gotten
more filthy, pornographic, and violent. I'm betting(hoping) that our
culture will begin to get tired of that trend, and begin to reverse it.
A non-commercial, G-rated, technically-oriented network may be just
what many are looking for. We are uniquely poised to provide this
service.

> Fact is, a highspeed national digital network using UHF ham radio has been

> nodes would such a network need, and who is going to build, maintain and
> coordinate them?

We need to use the existing Internet as the backbone, and then just use
data radios at the ISP(gateway) and user sites. The gateways could just
be PCs hooked up to a DSP or cable modem connection at people's houses!
The gateways would just need to be set up to allow access to
"ARS-friendly" IP addresses.

> The answer, I think, is some sort of universal digital protocol and network

> do that one.

Forget ATM, and all that stuff. Let's stick to a working, proven
protocol in TCP/IP, and NOT try to shoot for live video. Live voice

nets might be a real cool and very applicable, and very "do-able" application.   Everything is in place - except the cheap, TCP/IP-capable hi-speed(56Kbps or better) data radios.

You talked about folks getting by with their old 28.8Kbps links. Well that may be true, for those that are willing to live with text-only non-web and image access. But, even then, they have dedicated channels. Remember, we have to share our channels. We really need to get above 56Kbps to make this thing feasable.

I'm not saying that these aren't valid elections, I'm saying that those elected ignored the wishes of the membership. Now why would an elected person what to ignore membership? Because doing what's best for the amateur radio might mean depleting the corprate bank account!

>> >Polling is NOT the best way to get member input, IMHO; issues are

>> >may not be very interested in.

Anyone with a license has a vested interest in amateur radio and are the only ones with a vested interest. Without hams, there would be no amateur radio, but your statement above shows that you and the BoD don't believe hams have an interest. I was proud to be an ARRL member, back when you guys cared. The ARRL used to support everything I thought was important. What Changed? not me.

I completely disagree with you, Rick. Instead of us lightening up, IMHO, you need to become more responsible (see, opinion can work both ways) Example: It's okay for you to find Kim's callsign non-suggestive, but if "we" voice our opinion, we are thinned skinned and need to enjoy life more. Why do you make such general statements? You don't know us, our lifestyles, or how much we enjoy life. For all you know, I could be throwing one huge party at my house as I write this. (hey, turn that music down, I'm posting to the NG) : -))

Since I can't predict where Kim will be operating, I can't avoid those
frequencies like I do with 3950 and 14313. So, I think I'll just stay in
the CW portion of the bands and tell my 6 year old grandson that her call is
W5X (the weather lady) should she ever ID in CW.

Arnie -

"He's not going to argue with you until he's been paid."

You mean to tell us that with all the Monty Python references that have
appeared here over the years, you still haven't sought out the Monty
Python argument clinic sketch? It's a parody of this newsgroup I tell
you! :-) The argument clinic is right down the hall from the "being hit
on the head lessons". I think there's a parallel in there somewhere.

To N2EY - Is it on "Matching Tie and Handkerchief" ?

> You forgot one. alt.radio.family (Family Radio Service)

Rick, nothing was forgotten; the alt.radio hierarchy contains at least thirty subgroups, but they're not part of the rec.radio hierarchy. Alt(ernative) NGs can be created on a whim by anyone (and because of that, many ISPs won't carry them), while the rec(reational) NGs are created only after a rather long formal process (Proposal, Call For Discussion, Call For Votes, vote tallying by an independent vote counter, approval by the newsgroup creation committee who then will finally send out a control message asking ISPs worldwide to add the newly approved NG to their news collections). The recreational groups are created only after going through close scrutiny at many levels, including the Usenet readers (who approve or disapprove of the newly proposed group with their votes).

Can they handle it? There's so much to learn:

In our one-hundred year history, only a small percentage of each generation has shown an interest in the self-learning of electronic theory, soldering, reading and understanding schematics, collecting components, assembling radios, national and international radio laws, ionospheric propagation and antenna theory, assembling antennas, and communicating world-wide by RF emissions. It's very specialized; it was never an Everyman's hobby. That we have 670,000 licensees attempting to abide by our fundamental purpose (Title 47 CFR 97.1) is in itself amazing.

I have been going off and on since 1968 when I was in Jr High.

Observations:

The flea Market was only about 80% filled by Friday afternoon.
Sunday at opening time more vendors were leaving the Flea Market than people coming in.
Inside on both days no one knocked me over due to crowded conditions.
Hamvention Offical had to make a Sunday Annoucement at 0900 reminding inside vendor they were contracted to stay until close.
Heard a lot more complaining about every aspect from more people both days.
Especially, the bus situation.

Hey Sycho...

When all of the support infrastructure that makes your electronic goodies fail, will you be able to communicate with anyone about anything?

We will!!

I can make a small spark-gap transmitter (better yet, three or four spark gap transmitters) from a busted up transistor radio. If I happen to have a few hundred feet of wire, I can generate electricity with my bare feet.

Can you? Can you tear apart an apparently dead battery of cells to determine which cell(s) is bad, remove it, and get useable current from the rest?

Can you generate a distress signal using only your wits and and a pile of electronic "junk"?

You don't understand the art of amateur radio.

See you on the island! Going rate: Two quarts of water (desalinated only) for 2 minutes on the transmitter.

JB

Does it remind you of the skit where the nuns wanted to be spanked?  ;^)

Geez Larry, you live in a crappy apartment in a crappy neighborhood and you spend
all of your time betting lobster dinners.  Have you ever considered improving
your situation?  Upgrading your LIFE?  Hey - now that's a real incentive!

Thanks for the info, Jones!

That means that sometime between 1972 and 1978 (the old Callbooks were printed
very early in the year) the FCC issued that call. And the holder has kept it
through address changes and for over 21 years.

>you! :-)

No it isn't. The newsgroup is a parody of the sketch. Not a particularly good one, either.

>The argument clinic is right down the hall from the "being hit
>on the head lessons".

No it isn't. It's right UP the hall.

> I think there's a parallel in there somewhere.

You decide. The sketch is available at

http://www.montypython.net

It's available in both script and .wav format. I'd post it here, but I'm not sure about copyright rules concerning such things. Best bet is to hear the .wav format, because the expressions and tempo come through better. "Hit On The Head Lessons" is actually another sketch that immediately follows "Argument Clinic".

It originally appeared on the TV show, about 1970, then in the movie "And Now For Something Completely Different".
>
>To N2EY - Is it on "Matching Tie and Handkerchief" ?

That's the record album that contains a single disc that has three sides. (That's not a joke - it really does have three sides on a single disc). I'm not sure if it's the one, but the .wav format has the sketch anyway.

Gotta go. Porgy Tirebiter just showed up.

Ed Hare, W1RFI wrote:
>
>
> Who could better set ARRL policy on that matter, those that have taken it upon themselves to be fully informed, or those who have not read the info as published? Would this matter really be best resolved by a poll of members, of resolved by HQ staff who have devoted hundreds of hours to studying the issue and working with the manufacturers, the FCC and the ARRL Board?
>

The scene you describe above seems similar to what one sees on C-SPAN when some Senate or House committee is shown in session. The congressmen, like poor actors, try to impress the TV audience that they are fully knowledgable of the issue at hand, while their minions scurry back and forth behind them shoving notes under their noses and whispering into their ears, manipulating, coaching, and directing the whole proceedings.

"Shhhh, Senator, read question no. 2, then skip to 10, then yield equal time to Senator Fogbound. He will read comment 6 into the record". So, just like the Senate chambers, the HQ staff manipulate the BoD's, replacing the informed membership and their rightful influence, because "they" have assumed the role of the better informed.

Is this what you meant? Otherwise, one might question just what you do mean by "...resolved by HQ Staff...working with the manufacturers, the FCC, and the ARRL Board?"?

IMHO, the HQ staff should be relegated to the executive activities, not the policy making activities. That should be reserved for the national membership and the BoD. The title of the organization is the *American* Radio Relay League, not the *Newington* Radio Relay League.

Huh? I live in what is probably one of the highest-rent apartment complexes in the City of Dover, the neighborhood is very nice, and my "situation" is just fine, thank you very much! About the only way I could improve my "situation" would be to buy a house around here, but the real estate

market is a buyer's paradise and a seller's hell, and I just don't know for sure how long I'll be living here. I am anticipating a radical career move which could very well take me away from Delaware, if not out of the country, in a year or so -- so I have no need to go thru the hassle of buying a house, moving into it, and selling it for a loss! New homes here are overpriced and under-value for money spent, mainly because Delaware is being paved over at a record pace by a high-volume, cookie-cutter cheeze-box developer. Fly over northern New Castle County and all you'll see is vinyl siding as far as the eye can see!
Nope -- my present situation suits me just fine, thank you very much -- and I enjoy the challenge of operating QRP/CW from my apartment!
And it's unlikely that the house I eventually purchase, if I ever purchase another one, won't be chosen for it's suitability to ham radio operation!
That used to always be a priority for me, but it isn't anymore! Now I'm more concerned with potential for increased resale value. I'll leave the unsightly towers and beams to the terminal microphone morons!

I am taking my Extra on Saturday and want to have AA5VK to go with my name.
How do I apply for it?

So what's the downside? ;-)

Seriously, though, I agree in part. Media standards have certainly deteriorated in the past several decades. We went from too restricted (Dick Van Dyke and Mary Tyler Moore in single beds) to...well, you know what the modern media is like.

> I'm betting(hoping) that our
>culture will begin to get tired of that trend, and begin to reverse it.

I hope so too. Finally, something we agree on!

> A non-commercial, G-rated, technically-oriented network may be just
>what many are looking for. We are uniquely poised to provide this
>service.

That's definitely a selling point of the ARS. But there are some hams who are against the G rating. (See the discussion about certain callsigns)
>

Then what you have is amateur radio as an ISP and content filter system.

>The gateways could just
>be PCs hooked up to a DSP or cable modem connection at people's houses!
> The gateways would just need to be set up to allow access to

>"ARS-friendly" IP addresses.

The content would still need to be filtered, though. And somebody has to build
maintain and fund the gateways. To serve a reasonable area, a LOT of gateways
would be needed.
>

Whoops! Didin't mean to imply live video.

>Live voice
>nets might be a real cool and very applicable, and very "do-able"
>application.

That's why I think they are worth going away from TCP/IP.

>   Everything is in place - except the cheap, TCP/IP-capable
>hi-speed(56Kbps or better) data radios.
>
AND the gateways. Don't forget them!

>You talked about folks getting by with their old 28.8Kbps links. Well
>that may be true, for those that are willing to live with
>text-only non-web and image access.

Not relly. Lots of folks with 56 k modems connect much slower.

> But, even then, they have dedicated
>channels. Remember, we have to share our channels.

OK, then what we need is 28.8 or better speed while sharing.

The big issue, though, is the rest of the setup (gateways, etc.) and how the
filters will work.
>
> We really need to
>get above 56Kbps to make this thing feasable.

And to be a big enough leap beyond 9600.

But the big question - who will DO all olf this - remains to be answered.

Yep, that's true

>That won't increase the population much...

But it will delay the processing of new licenses, since they all go through the VE system. The delay for a brand-new ham is probably much greater now than before April 15.

No. Because no such skit exists.

You may be thinking of the scene in "Monty Python And The Holy Grail" in which

Lancelot is lured to the Castle Anthrax because Zoot (one of the beautiful inhabitants) left the castle's grail-shaped beacon turned on. The punishment for doing so is a spanking.

The entire scripts of all of the movies, skits and songs are at the various sites, too.

Well excccccuse me for being soooo dumb!

Just after several decades of observations and having been a flea market vendor, this year it seemed to be large percentage than usual. I also noted several large flea market vendor whom I have dealt with over the years did not attend for the first time in 10 years.

But I forgot this is the internet where personal opinions must tempered by considering everyone's point of view and framed up to politically corrected to accommodate everyone else on the net.

Next year I will collect evidence in the form of tallies, statements from vendor / patrons, etc. to present a more concise and formal report. I will form a fact finding committee to explore this situation, and issue position paper to congress after 2001 Hamvention, after all a national Icon might be in jeopardy! Application for the committe will soon be on-line at www.who_could_careless.org/applicationsforcommittee/hamvention/form.html

>The flea Market was only about 80% filled by Friday afternoon<

I was there at noon Friday and the palce was full of sellers as far as the eye could see. Just how much can you do in one afternoon there anyway?

Most of the flea marketers are people with "real jobs", and taking the extra time to go to Dayton means time off from work.

>Sunday at opening time more vendors were leaving the Flea Market than people coming in.<

Did you have to drive through the construction work thatwas in all directions into and out of Dayton? I'd leave early too if I had to drive a truckload of stuff through all of that AND contend with traffic AND construction detours AND had "hours" to drive to get home....

>Inside on both days no one knocked me over due to crowded conditions<

Gee...the HamVention folks should be chastized and forced to re-route all foot traffic into very narrow, hard to navigate lanes. Shame on them for trying to make it more convienient and enjoyable to cruise the aisles.

>Heard a lot more complaining about every aspect from more people both days.<

I was there two of the three days. All I heard was how hard it was to try and see everything in ONLY three days.

>Especially, the bus situation.<

We parked at the Salem Mall both days and never waited more than 10-15 minutes for a shuttle bus.

Don't know which "Dayton" you went to, but it doesn't sound like The One in Dayton, Ohio.

73

>Well excccccuse me for being soooo dumb!<

If you are not ready to take the heat for any opinions, comments or statements you make here, I'd recommend you don't COME here.

It's dog-eat-dog here. Trust me.

>Just after several decades of observations and having been a flea market vendor, this year it seemed to be large percentage than usual.<

As you can see, opinions vary.

>I also noted several large flea market vendor whom I have dealt with over the years did not attend for the first time in 10 years.<

There were also new vendors there.....So what?

>But I forgot this is the internet where personal opinions must tempered by considering everyone's point of view and framed up to politically corrected to accommodate everyone else on the net.<

"Politically correct"...?!?! You made observations and commented on them. Responses were made to that that simply said that some of the things you commented on are routine circumstances.

What's not "PC" about that...?!?!

>Next year I will collect evidence in the form of tallies, statements from
vendor / patrons, etc. to present a more concise and formal report.<

We'll be waiting with abated breath.

>Application for the committe will soon be on-line at
>www.who_could_careless.org/applicationsforcommittee/hamvention/form.html<

And you'd be right...WHO COULD CARE LESS...?!?!? Answer: ME!

I had a blast, but then I was there to have a good time...not critique the HamVention Committee.

I succeeded, therefore THEY succeeded.

By the way...How many hamfests of this proportion have YOU organized...?!?!?

>you need to become more responsible (see, opinion can work both ways)
>Example: It's okay for you to find Kim's callsign non-suggestive, but if
>"we" voice our opinion, we are thinned skinned and need to enjoy life more.

I agree with Arnie 100%. Here's what Rick previously posted:

>> Oh so what about Kim's call sign, are all of you that thin skinned
>> and upset over here call letters? It does not bother me one bit!

What Rick is really saying is that if it doesn't bother him, it shouldn't
bother anybody.

>> In
>> fact if I heared her on the air I would definitely try to contact her.
>> For some one with a call sign like that I know that person would be
>> full of life.

That's actually an expression of prejudice, in the sense that Rick is
pre-judging the callsign holder without any real information.

>> The rest of you people have to lighten up a little and
>> learn to enjoy life.
>>
Another expression of prejudice, because he assumes we don't, just because we
have a different opinion.

>Why do you make such general statements? You don't know us, our lifestyles,
>or how much we enjoy life.

Exactly.

> For all you know, I could be throwing one huge
>party at my house as I write this. (hey, turn that music down, I'm posting
>to the NG) : -))

You folks have no idea how idea how difficult it is for me to post here while
getting a full-body hot-oil rub from my supermodel wife and her identical twin
sister (a little bit lower, dear....oooohhh that's the spot). Nor the expense
I've gone to for the special waterproof keyboard and monitor by the hot tub.
>
>Since I can't predict where Kim will be operating, I can't avoid those
>frequencies like I do with 3950 and 14313.

This is one of the reasons ham radio needs different standards than
broadcsting. TV and radio shows are rated by content and shown on a posted
schedule. Objectionable stuff can be avoided by reading the schedule. Since
amateur operation is unscheduled, we must assume that anyone can listen/watch
anyhting at any time.

> So, I think I'll just stay in
>the CW portion of the bands and tell my 6 year old grandson that her call is
>W5X (the weather lady) should she ever ID in CW.

Another advantage of the mode!

The VE team, if they have any kind of clue whatsoever, should have
the Vanity Callsign paperwork available; or you can go to www.fcc.gov
and follow the links to the ULS, and apply there.  AA5VK is currently
not issued, however it may not be immediately available if someone
else dropped it for a Vanity call and two years had not passed yet.

It's illegal to *sell* alcohol in a dry county, Larry.
It is not illegal to consume it on private property
unless the owner of the property objects.

> If your neighbors know about your stash of spoiled

I drink beer while I'm mowing my lawn. I live my life
in the open, suffer the consequences, and therefore
don't have to worry about keeping secrets or needing
to post anonymously.

But the next time I see an airplane fly over me, I
will remember your posting, and it *will* remind me
of a rowboat in the middle of the desert.

The point is: You and Jim have absolutely no idea
about or control over what something reminds *ME* of.

Speaking of which, do you also object to the callsign W5XXX?
That's a triple-X rated callsign if I ever say one.

Nope I didn't, Steve. I just couldn't believe anyone could
be so stupid as to deny or ignore the existance of thousands
of all-white KKK gangs. I know of no other organization that
has thousands of chapters of gangs as does the all-white KKK.
Add in the motorcycle gangs, the skin-head gangs, the
Arian Nations gangs, and the militant militia gangs and
I wouldn't be surprised if those outnumber the black gangs.

> Cecil would have us beleive that HIS opinions ARE fact.

That's a bold-faced lie, Steve, and you know it. I have gone
out of my way, more than once, to declare that all my postings
are only my opinions unless stated otherwise and that a lot of
my postings are tongue-in-cheek. What is it about those statements
that you don't understand?

You were a nice guy for awhile, Steve. Then you reverted to
being an AHole. What happened?

This week's Communications World from VOA includes a segment on ARRL taking up the task of field-strength measurement of broadcast TV to determine who is eligible for distant-signal TV reception on satellite services.

It was not entirely clear just how far this idea has gone but one FCC official is quoted as saying that ARRL is the ideal candidate because of total lack of commercial interest.

Sure we do.

Larry mentioned a connection between seeing an airplane fly overhead and a rowboat in the desert. You read that post. Now, when an airplane flies over YOU, you've said it will remind you of a rowboat in the desert. Which would not have happened if Larry hadn't posted what he did.

So Larry has exerted some influence over what something will remind you of. Not total control, of course, but but some control.

There! I've run rings around you logically!

Cecil:

W5XXX isn't triple-X rated, it's just triple X! BTW -- if anyone had
such a call sign, and I heard him use the phonetics "Dubbaya Fahaive
Triple Exx," I'd assume his callsign was "W5TX." Of course, it all
depends on how much reverb his echo mic picks up off the back
wall of his trailer!

Why bother? Just think of the net as a big baseball game, and you're the
umpire. As you know, umpires simply call them as they see them, and there's
plenty of Earl Weavers and Billy Martins to argue your call.

LAK, welcome to rrap. It looks like you're heading in the right direction.

Please be sure that your founding members are elected, even though there are no member to elect them. I know it sounds a little crazy, but that is how things are done here.

You also need to have a constitution and by-laws. Post your membership roster, including names, soc. security numbers, and bank routing numbers so that we may verify actual membership data.

Also, be sure to indicate each member's operating preference, so that if they should claim to be a DXer we may tear them down and stomp on their heads and kick them in the ribs and other vital places. No claim of being a DXer is too small to be overlooked.

Furthermore, we will need a break out of age groups within your committee so as to see if hams really are mostly octagenerians. Be sure to publish something so that we can say you're only interested in the book store aspect of your organization. Lack of a financial report will immediately be met by claims of you running off with the money.

Finally, it is vitally important to determine if your committee members use CW "rarely or never," or "always."

Ooops, almost forgot - two on the group will need sexual preference information. I know, I know, but they really seem to thrive on it.

Not a CHANGE for the worse I hope. I don't think that any heavy political debate belongs here...BUT I do think that the hypocritical right wingers who don't know the difference between sexual intercourse and blow jobs are not fooling the majority of the American public.

Our president has committed the federal government to funding programs that will train teachers to be computer literate. This is needed to give all children the basic training required for them to be capabile of using a mouse and keyboard. Now if our president had asked for funds to get all teachers trained to earn Ham licenses and trained to be able to teach Morse code would that make him more interested in the education of the American people??? Nope...BECAUSE as you said most of us have been waiting for the social changes that will be the result of the technological changes that are now obvious to most people who have technical backgrounds. Web hope that good (not bad) results are to be expected when the public adopts the new media in their every day life....When almost everyone has access to the INFORMATION HIGHWAY.

Yep...I have to limit my off-topic politics but there are lots of things that need to be technically considered. When we talk about how modern technology can be applied to Ham Radio, that is one relevant topic BUT a greater factor is how Ham Radio can survive. - We must talk about how Ham Radio can COMPETE with modern commercially available popular technology. How can we compete with wireless cell phones??? How can we show that Ham Radio has advantages over Internet surfing and NG chatting???

The Novice Class and the Technician class ham license was originated in 1951. The reason that they were established was to combat a relatively new passtime that was taking over the spare time of Americans (particulary American youth). That was TV viewing. TV was invented before WW2, but it wasn't until around 1950 that the average middle class family owned a B&W TV set. By the end of the 50s there were almost as many TV sets in American households as telephones. Today we have a greater competitor: - The home PC, which is becomming more common each year, as PCs become cheaper and easier to operate and more technically capable. So what do we do??? We simplify and restructure Ham licensing. We forget about making an entry level class that will attract youth and test them on what they probably have learned or will be learning in order to operate their PCs. We reduce the total number of exam questions and the number of Ham classes to devaluate the whole educational purpose of the Ham license structure. We make computer gurus seem even more expert than Extra class Hams because what they learn makes them more valuable than Hams to academic, military and commercial real world organizations. In my not so humble opinion, we have simplified the baby out with the bath water. We have down played the common basic electronic communication technological knowledge that applies to both Ham Radio, computer technology and telecommunication.

In 1951 we created two new classes of license. In 1999 we killed three classes of licenses. Does that show that we are recognizing our competition as well as we did in 1951 - today??? No, it shows that Ham leaders want to down play the technical educational aspects of Ham Radio in order to upgrade the old Ham appliance operators who are not interested in learning any new technology and not ready to accept the challenges the are obviously an outcome of TECHNOLOGICAL CHANGE.

The ARRL sent questionaires to Hams, asking their opinions but it

would have been better to ask educators, scientists and even the
general public. The non-Hams wouldn't just be interested in up-grading
themselves. They would be more interested in promoting Ham Radio as
the TECHNICAL HOBBY that it is. Ham Radio is an American legacy that
deserves to be preserved. It can only be preserved if it accepts the
changes that must be made as a result of MODERN TECHNOLOGY.

Hams need MORE license classes,
Bob Wex w2ilp (Increase License Potential)

A little girl told me that she liked RADIO
more than television because the pictures
were so much more beautiful.

>   Neither one of you are correct.

In my opinion all of us are correct. Peoples' motivation is a
complex subject. Motivation in any individual or for any group can be
promoted in various ways and there are many reasons why anyone might
not be enthuastic about any hobby or sport. Especially when such a
hobby or sport has grown out of style.
>
>   The lack of "youth" in Amateur Radio is a simple matter of lack
of
> application and a proliferation of other distractions.

Yes in 1951 television viewing was recognized as a DISTRACTION - so
the answer was to create two new classes of license (Novice and
Technician).
Today the use of home PCs and surfing the Information Highway is
recognized as a distraction. So what did they do? They eliminated
three classes of license (Novice, Tech Plus and Advanced)! Simplifying
the license structure may be what old Ham appliance operators want (so
they can easily upgrade) BUT is it what is needed to motivate the youth
of America by showing that they can learn valuable technology that can
apply both to Radio and to digital communication? How can we get
teachers to promote Ham radio to the kids if they are busy teaching
them how to use PCs? The latter is now going to be funded by the
Federal Government because politicians of both major parties are now
committed to promoting the Information Highway. Computers and
everything involved with them is big business. If you break up
Microsoft into Microsoft and Macrohard the whole stock market will be
disrupted! By comparison Kenwood, Yaesu and ICOM are small peanuts.

>   We have to "accentuate the positive" and make it more
appealing. The
> days of being able to simply infect a youngster with our ability to
communicate
> globally with a crystal set and spark gap have passed.

We can accentuate the positive BUT today PCs are seen as MORE
POSITIVE than Ham transceivers and more worthy of being accentuated.

>   Kids today need challenges, and those challenges must have some
sort of
> practical application.

Yep and learning to be "at home" with computers is becoming a very
popular challenging application that has lots of educational value as
oppossed to Ham Radio, whose leaders say it is not a Technical Hobby.

> Thre's no "elitism" or "generation gap" to it. It's ALWAYS been that way.
> We just seem to want to forget that every so often and we wind up reinventing
> the wheel.

We may have to reinvent the wheel for the people who want to use square wheels because round wheel technology knowledge is not required on the Ham exams.

> So much wasted time when there's no time to waste at all.

Yep...Thats the truth. It was always true that young men had to learn how to make a living and still have time to date the girls. This left only a little time for most to engage in any hobbies that couldn't satisfy either their quest for economic security or their sexual needs. Nothing has changed today except that Ham leaders now say that Ham Radio is not to be a Technical Hobby and a famous "Dilbert" cartoon insinuates that Ham Radio is not a very sexy hobby either. (sic...It only gives goose bumps). How can we expect to attract any normal guys these days???

> 73
>
> Steve, K4YZ

73,
Hams need MORE license classes,
Bob Wex w2ilp (Incentive License Proponent)

If you want your children to be brilliant,
tell them fairy tales. If you want them
to be very brilliant tell them more
fairy tales.
--Attributed to Albert Einstein--

Hmmm...Is that how we get conditioned to
learn? Maybe so...Because people always
seem to vote for the politicians who can
tell the best fairy tales. People think
that I am too technical. I admit that I
can't make up any new fairy tales that
haven't been read to me by my mother.

If it's a joke it is a blessed old one. I believe Appassionata von Climax (I remember it with the C but I wasn't all that old at the time) was Capp's spoof on Marlene Dietrich. Probably from Destry Rides Again and Ask What the Boys in the Back Room Will Have. Same thing Madelene Kahn did in Blazing Saddles -- I'm Tired. I was always amazed Al Capp got that one thru the Blue Nose Curtain that prevailed at the time.

I came in about the time of General Bullmoose ('Engine Charlie' Wilson, ex-pres of General Motors), Failwell Fatchance (Adlai Stevenson) and right at the end Joanie Phoney (Joan Baez). Capp's pissing contest with the guy that did Dick Tracy gave us Fearless Fosdick.

Won't fight you for the schmoos, Jim, take a Dogpatch Ham any day of the week :=)

It exists in the mind of the guy in a rowboat in the desert.

Thank you, Larry. You were right about the VE's.

Jim and Richard see below.

I passed today. Coming off the street, I have to wait for the license before getting the call. No hurry, this is mostly for co-workers anyway.

1. This is my real name and my mother's too. It happened many years ago when the judge at the divorce hearing suddenly said something like Of course you will want to change your name. The man's name would still cause you to throw up. It does come from the Dogpatch cartoon.

2. No I am not a stripper. I am a civil engineer. I do use another name.

3. Yes I have thought of changing it. Not while Mom is still alive.

Thanks again. I expected something more childish.

Pas

I'm an Electronics Engineer and I don't know how to
make a spark-gap transmitter out of a transistor radio.
Care to describe how to do it?

Connect two clip leads to the batteries. Connect one clip lead to a
rusty file. Drag the other clip lead over the file in Morse Code
sequence. <grin>

I've heard C.W. transmitters that sounded like they were built that way.

Yes, even Algore would be a semi-welcome change, unless dead Buddhist nuns are found in a DC park and its ruled a suicide.

> I don't think that any heavy political debate belongs here...BUT I do think that the hypocritical right wingers who don't know the difference between sexual intercourse and blow jobs are not fooling the majority of the American public.

He wasn't asked if he had "sexual intercourse," Bob. He was asked if he has sexual relations of any kind, Bob. Its called oral SEX, Bob. Since it occurred between TWO people, Bob, it was a relation. Burnadette Peters sang a song about making love alone, Bob. Too bad the Prez didn't listen, Bob. A box of Kleenex would have gone over much better than a semen stained dress, Bob. Do you disagree with that, Bob? Larry Roll may be remided of a guy rowing a boat in the desert whenever an airplane flies overhead, but whenever I am offered a cigar I will be reminded of the sickness in the White House, Bob. Or is that hypocritical, too, Bob? He knew they had him and all he had to do was tell the truth, Bob. The truth, Bob. He could have fooled the people with the truth, Bob. It would have been so out of character that no one would have believed him, Bob.

snip

> We make computer gurus seem even more expert than Extra class Hams because what they learn makes them more valuable than Hams to academic, military and commercial real world organizations. In my not so humble opinion, we have simplified the baby out with the bath water. We have down played the common basic electronic communication technological knowledge that applies to both Ham Radio, computer technology and telecommunication.

On .antenna, a one by two ham claimed to have read "several" articles on the "half-square" antenna, which gave dimensions for 80 and 40M. He asked if anyone knew what the dimensions were for 20M. I sure hope he was a 'puter genius, because he sure didn't know the 1st thing about being an Extra. Then a two by two ham asked for instructions for assembling a rg-213 cable with pl-259's. It must be either the 1st of April or its Trick-or-Treat time.

> In 1951 we created two new classes of license. In 1999 we killed three classes of licenses. Does that show that we are recognizing our competition as well as we did in 1951 - today??? No, it shows that Ham leaders want to down play the technical educational aspects of Ham Radio in order to upgrade the old Ham appliance operators who are not interested in learning any new technology and not ready to accept the challenges the are obviously an outcome of TECHNOLOGICAL CHANGE.

WHAT? The question pools have gotten ever more technical. The question pool for Extra is a combined Advanced and Extra question pool. Nothing was dumbed down. Dropping fast code is NOT downplaying the technical aspects of the service.

> The ARRL sent questionaires to Hams, asking their opinions but it would have been better to ask educators, scientists and even the general public.

The FCC asked the American Public for their opinions. I've quit caring what the ARRL does. The last I heard they want to give out CODE certificates to replace those "technical" FCC code exams.

> The non-Hams wouldn't just be interested in up-grading
> themselves. They would be more interested in promoting Ham Radio as
> the TECHNICAL HOBBY that it is. Ham Radio is an American legacy that
> deserves to be preserved. It can only be preserved if it accepts the

Helloooo! That's the message that NCI has given out, and all you eyes rolled back, CW Forever types rejected. Now you've reinvented the NCI message and adopted it as your own. Good for you.

Cecil....

I'm betting you are a good guy, but I'm also betting that you are baiting me.

If you are an EE, and you don't know how to build a spark-gap transmitter, then I'm sure that I'm not the one you need to be talking to.

See my response to Glen for starters.

Also, remember that in my first post in this topic, and in those posts following the first, I am communicating with someone who relies on the understanding and promise of performance from others rather than on his own technical 'understanding of the concepts' himself.

Again, this is not a question of legality or of polite, logical discuurse. To me, it is a matter of practicality....there are those who "CAN" when it comes to radio wave communication, and those who "CAN'T".

Those who "CAN" are those who understand the art of amateur radio (or, those who understand the technical essence of radio telecommunications in general, for those who like to split hairs), and those who "CAN'T", meaning those who rely on others to provide them communication services, and who have NO idea of how to arrange the same service for themselves should their enablers fail at the task of serving them.

In a nutshell, I am considering those who "talk out of their butts" against those who have the technical saavy to be "CAN DO" operators.

Discussions along any lines other than these are based on a failure to understand my point of departure, and a failure to understand the difference between a technically saavy ham and the qualifications of the intended recipient of my first post.

Basically, discussions along any other lines than these betrays that the dissenting poster didn't understand the difference between the original poster's comments and my response to those comments.

Regards!

JB

This may be a "duplicate post" of sorts in response to Glen, but
I posted one and did not see it appear. Sorry to have taken
uptoo much space if it (eventually) did appear.

In basics, Glen seems to have the point, or at least he has
responded accordingly, and seems to understand what I am trying
to say.

Best Regards!!

JB

Well, I know how to do that Glen, but that has nothing
to do with making a spark-gap transmitter out of a
transistor radio.

Oh, I know exactly how to build a spark-gap transmitter
just not out of a transistor radio as you said you do.
Exactly what parts in the transistor radio do you use
for the spark-gap transmitter?

I choose my words to convey meanings, Ed, but your sentence doesn't answer my question.

>> Or does it mean that the "livewire" at CW is so pumped up they are
>> prescient on guessing the "correct meaning" of garbled characters?
>
>C-N Y__ GU_S_ TH_ ME__NIN_ O_ T__S?

That might be "CCNY GUS THE MINNESOTAN" for all I know. Could be a student or instructor from the upper midwest? :-)

Ed, as I said before, I broke into long-distance HF communications with a rather severe requirement to be accurate. If a military radio circuit was doubtful of some message data, the circuit handlers would ask for a re-send. With TTY tape, that wasn't difficult at 60 WPM...the original and a re-send could be done faster than two skilled morse ops doing 20 WPM high on caffeine.

When nuclear warfare is threatening during a Cold War, do you think that the US military is going to entrust vital communications to manual morse code?!? Why would anyone bother with trying to guess message content under such conditions?!?

Ok, so I'm using my early adult experiences. Military communications isn't amateur radio communications, but is amateur communications requiring guessing of morse characters?

Is guessing necessary in all those ham traffic networks using only morse? Several long-timers have made much of those nets and their vital information on health and welfare. Seems to me that message content should have accuracy in content. Maybe I'm wrong but I thought that someone's health and welfare depends on accuracy, not guesses.

>> >Perhaps a few decades from now, the advances in AI will allow a general
>> >system to do as good a job as a human, or even better.
>
>> I think there is too much artificial intelligence around now,
>> especially about the set-in-concrete, armor protected,
>> traditionalist 1930s standards and practices of US amateur
>> radio...but that's only an opinion of mine...and thousands
>> upon thousands of others.
>
>Thousands of thousands? Seems a bit high to me. :-)

There's no polls available to verify all those who've expressed an interest in amateur radio but were turned away by the code test requirement. That might explain the quarter million no-code-test Technicians that joined the US amateur ranks in the last decade...even though so many long-time amateurs openly hate and despise Techs.

"Thousands upon thousands" is a carefully chosen term I wrote, not "thousands of thousands." My careful choice can be interpreted as either several thousand, a whole million, or some number in between. Your choice. Can you prove me wrong on something that hasn't been quantified?

>because he believes a couple of people miht laugh at him?

I'm speaking for him. Haven't had much contact with him for about three years other than Christmas cards (he went up to the Bay area to play in Silicon Gulch).

>> Someone who eight years ago experimented with a project
>> for self-satisfaction has some kind of "need" to "share it
>> with the world?" Someone who has been written up in
>> ACM journals already?
>
>I don't think that most of those who share their experiences with others do
>so out of need, Len.

Of course they do, Ed the First. The "Publish or Perish" syndrome is as alive and well today as well as a decade ago.

Do you REALLY think that a full explanation of the program along with flow charts would be "acceptible" to a membership that prizes manual code skill over nearly anything else in amateur radio?!? I don't think so based on input from others concerning their expertise and "necessity" of manual code skill...'others' include those not in this newsgroup.

>> Of course you did. Uh huh. Guessing at what garbled characters
>> "really meant." Hmmm...that sounds suspiciously like the Carroll
>> Syndrome at work. :-)
>
>It worked for me, Len. If you choose not to believe it, I see no harm.

I choose to not believe it. Of course, my break-in to real-world communications was rather severe in accuracy on message content (the USSR had the Bomb and was waving that around).

Fortunately the US military was using teleprinters back then, not morse operators at each end.

>> Whoa. How did all this "guesstimation" become part of the Lore
>> of CW? [see "Accuracy Transcends Speed" or something like
>> that from another organization]
>
>I don't think the guesstimate is related to CW skills in any way at all,
>Len. Just happens that the thread is about CW copying by software.

Oh? Accuracy isn't required with manual morse code?

Are skilled human operators so good they can "fill in blanks"
due to garble and sloppy sending? I guess so.

>> Maybe I underestimated the Lore of CW. Maybe it is a large
>> detective game, of trying to find clues and other little details to
>> lead to some kind of conclusion? I find it fascinating to watch
>> all the rationalizations being written to shore up leaking ships.
>
>In what way do you think my statement that AI will someday advance to being
>able to perform a skill that right now can only be performed by a human to
>be CW lore or shorign up a ship?

I didn't send my message in private, Ed the First. This is in public
and all those other CW expert superoperators expound on the
Lore of CW, etc.

>> All I did was report on something I saw and heard working some
>> while ago. I make no claims to its efficacy other than it worked
>> at "human rates" and at rates faster than most humans can
>> tolerate. It had its drawbacks and was not perfected. So what?
>
>I think it was neat, Len -- neat enough that I was hoping he would share it
>so we could all learn a bit more about how to solve such problems.

Again I ask why? All those extrasuperior morsemen out there all
say that the only "problem" is practice, practice, practice so that
all newcomers can approach (but never equal) their superior skill.
That makes newcomers "acceptible to the amateur community"
or something like that.

I have no quarrel with you, Ed. I've never had any quarrel with
several other Ed persons I've met...including Ed Dodds, my
boss at Ramo Wooldridge in 1960 (forgot his W6 call). I have
a quarrel (arrows included) with all those old-timers who think
that the epitome of all amateur radio is to emulate the super
morsemen of the 1930s in the year 2001.

>> Yours in science,
>
>Somehow, this doesn't quite feel like the science I remember.

It doesn't feel like science to me either. Scientists tend to be
more flexible on accepting new ideas than long-time radio
amateurs who don't want anything new to disturb their tales
of derring-do and daring, of being able to leap tall pile-ups,
and destroying infidels and heretics with mighty FISTS of CW.

:-)

> > FISTS says: ACCURACY TRANSCENDS SPEED, COURTESY AT ALL TIMES
> >
> > You disagree?

Of course I agree.
But as usual, the exception to the rule always seems to show up. This time it's you. It really is too bad that you didn't grow up and mature into a real man before you showed up on RRAP. You might have showed some potential as true
Real Ham �. Instead, looks like you're determined to spend the rest of your ham radio involvement as a malcontent, protesting your own inadequacies by pointing the finger anywhere else. You said that you might just learn the code once no one was "forcing" you to do it. And now this nonsense. So much for your "plans".

Accuracy is more important than speed most CW operations, it's true.
Courtesy at all times is definately the preferred rule, but on rare occasions a belligerant, pugnacions induhvidual will appear and insist on blaming all his personal shortcomings and immaturities on those who he envies, becoming critical and abusive, generating a regretable exception to the most desirable rule.

And in your case, of course you have no idea what a CW test actually amounts to. When you take (took) a test at the FCC office they require you to copy a message to paper, any way you can without aid, and when they required the applicant to send code, they had you send a few words from a printed sheet. If the examiner could copy what you sent you passed.

Your assinine assertion that some vaporous "specification" must be adhered to is one of the most brainless ideas you have had to date, and that includes a considerable number of brainless ideas.

The idea that FCC, while downgrading all code speeds should then invoke some closely toleranced "specification" shows just how far you are from reality.

But that's nothing new for you, is it?

A little comedy? OK. I always got a chuckle out of your we-we jokes about hams always using the word "we". Well I've noticed that your posts seem to have a awful lot of the pronoun "I" in them. You know, I did this and I did that. So anyway, if we hams are we-we's then you Len are an I-dull person. Get it? Idle, I-dull person? Does it fit or does it fit. Aren't you chuckling? Hey don't get mad, you egged me on...   :-)

Don't know about fun and fast but one tip I can give you is to learn to copy by hand writting rather than printing. Before I became a ham I heard one ham tell another he wished he had learned by using hand writing as he found printing took too long especially at faster speeds. I used that tip and never regretted it.

Since we haven't had much discussion about the election recently, I decided it was probably time to revisit the topic. After all, anything has to be better than the endless no-code debate. Besides, this has it all - the election, Katherine Harris, Mary Berry, Nazi Germany, racism, civil rights, Democrats, Republicans, Bush, the new Congress, and so on. I'm sure there is something in here to interest almost anyone.

Anyway, I watched C-SPAN today as Mary Frances Berry, Christopher Edley, and several other members of the U.S. Commission on Civil Rights, trashed Florida's Secretary of State Katherine Harris during a hearing about "Allegations of Florida Voting Irregularities."

Following almost an hour of often rude questions from the various members, including a request that Ms. Harris read quotes about Nazi Germany from a book, Chairman Berry called Ms. Harris's testimony "laughable."

During Ms. Harris's testimony, Berry seemed particularly bothered whenever Ms. Harris referred questions to Clay Roberts, director of the Secretary of State's elections division, instead of answering the question herself. Ms. Harris repeatedly explained, whenever challenged on this, that it was far better that Mr. Roberts answer the question himself to insure that information given was accurate and complete.

Since Mr. Roberts was sitting right next the Ms. Harris, this logic seemed perfectly reasonable, but that did not satisfy Berry, who made several sarcastic comments, both during and after the testimony, about it.

Following the hearing, Berry said that another hearing will take place soon and that she intends to call Ms. Harris to testify again. Berry also said that she intends to subpoena Governor Jeb Bush once again (he appeared Thursday), concluding that, "I have the power to subpoena anybody and I'm going to use that power."

In spite of several days of testimony, and weeks of gathering information, the commission has yet to find any evidence of illegal activity on the part of Florida voting officials, or a single instance of intentional civil rights violation.

The Commission has been widely criticized in recent years. The appointment of chairman Mary Frances Berry caused a fire storm when it was discovered that she had once claimed that, "civil rights laws were not passed to protect the rights of white men and do not apply to them." [Civil Rights Under Reagan, San Francisco, ICS Press, 1991, p. 141.]

The commission has also been widely criticized for its political makeup. The law says that no more than four members shall be of the same political party. And, while the commission currently consists of four Democrats, three independents, and one Republican, critics charge that the three independents, which includes Berry, have a long record of supporting Democrat party issues and candidates, and are therefore nothing more than Democrats who call themselves independents.

I certainly hope President Bush, and the new Congress, uses better judgement when selecting members for future commissions. They can start by selecting members who are more racially and politically representative of all Americans, and by avoiding extremists like Mary

Frances Berry.

Interesting class of radios to which can be added the new FT-1000 and FT-817 which is a whole new breed of cat. The problem with all of them is that they suffer performance deficiencies because the design intent was to cram as many features as possible into as small a package as possible and compromises had to be made. Not

shabby radios at all and they put signals on the air from places where bigger radios are simply impractical. But they just don't cut the mustard for serious vhf/uhf weak signal work.

They'll all hit various vhf/uhf bands and various modes and the TS-2000 and FT-847 desktoppers probably have some decent vhf/uhf performance capabilities. The problem with those is that a serious vhf/uhf operator has to lay down well over $2k for a duz-all-bands (except 222 . .) radio including 9 HF bands + wideband SWL receive in which he may well have no interest. I can't believe that there isn't a market for a >30Mhz all-mode 100w Tech radio which has the features and performance of the "HF/vhf hybrids" and should cost a lot less money. I already have all the HF gear I need. I'd jump all over a radio like that if it was in the $1k range. Ten-Tec had one in the works but the designer quit so they dropped the project. (?!)

Nobody has the time to scratch-build and chasing parts is expensive and time consuming, there's just no ROI on the dollars or the hours unless it's for experimentation. Kit building seems to be on the upswing, however.

I certainly won't take any advice from you.  You advovate, if not engage
in poor amateur practice.  I would have expected better from an old
Extra and VE.

Your troll will do you little good, Bill, so stop praying for that break that is never coming to you. You asked the questions, I answered them in full. Very explicitly. So shifting the focal point back on Bash as a person, versus what the overall effects were, is a bit amateurish. If the powers that be want to change the face of the exam structure, they will. Over an 18-year period, I've told them, and you, just how to do it. If they haven't got the stomach for it, it's ham radio's, and ARRL's, funeral. It's that simple. If they want to restore integrity, they will.

That's because you took a knee jerk approach to reading
and didn't read on. I've also outlined the details for
18 years, in published form. ARRL has some of those
papers. By the way, when I'm assigned national overseer

of the exam process by ARRL, and am given a lawyer who
knows his/her way around the courtroom, I'll show you how
it's done.

>Just how many ways can you ask what the unit
>of electrical resistance is?

First, that's not a technical question, which is the
subject under discussion. It's asking for a definition.
Second, I'd wager you never actually saw that question
asked on any actual exam you ever took. I never saw that
question on even my Novice exam. If it's being asked now,
it's time for hams taking those exams to start complaining
about dumbing down.

You're not reading Bill. I'm talking about an example
for college test guides.

You're also not reading ahead before responding. So you're
responding in knee jerk fashion. I end up by saying that
license manuals for Amateurs, _at a lower level_, should
achieve the same goal as a college test guide.

Dick, you'll always find opposition from me when you advocate poor
amateur practice. All you have to do is reverse yourself.

I don't know what it is about these OF's that think just because they
have more time in the chow hall, they own the ARS. It doesn't work that
way. When you're wrong, you're wrong.

>Your level of technical proficiency to answer those type
>questions goes well beyond that of any entry level amateur
>exam...including General. You want a graduation certificate,
>not a license exam.

Given what I've said about college exam guides, and Amateur
guides _at a lower level_, you're incorrect. Go back as far as
you wish in Dejanews for what I've said, which is learn the
BASICS before trying to master DSP, etc.

Regards,
Vince, WB2EZG

The paperwork wasn't turned in until I had one last chance to save our hides.
:-)

>I guess the DXCC Desk will have to be given over to an
>all-volunteer staff!

With the DXCC fees, DXCC is at least partially self funded. I don't know how close it is. A number of hams are members of the ARRL JUST for DXCC.

However, if you feel that the money spent on DXCC is better spent and that the loss of members would be offset by the savings, that sounds like good information for you to discuss with your ARRL Division Director. He may also be able to answer any questions about the funding and other financial issues. The Board meeting is coming up, so now is an ideal time to send him an email or pick up the telephone.

>The FCC could have changed the tests every day if
>they wanted.

The FCC hasn't wanted any part of ham radio since at least the early 80s, remember? Remember when Vic Clark's statement was brought in re: the issue has to do with code AND theory, not Morse per se?

Remember when you said "that's all bull"? FCC's
recent R&O made it quite clear Clark's statement was
right on target. We now have no justification for our
frequencies as a technical hobby. And that's just the
way the "powers that be" want it.

> choose my words to convey meanings, Ed, but your sentence
>doesn't answer my question.

You are right, Len; I had misread your question. I believe that things exist
that I don't know about. This could be one of them. I didn't realize that you
thought that some people were unaware that things could exist without their
knowledge. While I would agree that some people might think that, but I
believe it is a very small percentage.

What is your estimate of the percentage of population that believes that things
they don't know about cannot exist? Did you ask the question because you feel
that I am in that percentage?

>trying to guess message content under such conditions?!?

Do you believe a QSO on the bottom end of 40 meters is of the same scope as nuclear war threatening? Under the QSO conditions, I "guessed" because I didn't know what the other guy's problem was and didn't want to get into a discussion about why his sending is so bad. I never imagined that the QSO would be related to nuclear war on a newsgroup. :-)

>Is guessing necessary in all those ham traffic networks
>using only morse?

I would say, Len, that few of the QSOs I have require guessing. Certainly the percentage due to faulty encoding is very small.

>Several long-timers have made much
>of those nets and their vital information on health and
>welfare. Seems to me that message content should have
>accuracy in content. Maybe I'm wrong but I thought that
>someone's health and welfare depends on accuracy, not
>guesses.

You are correct; in any formal traffic handling, accuracy is part of the system specification. Guessing is not allowed. Casual QSOs? Probably the same rule as vocal conversations. If you miss a word that you don't believe to be critical to the flow of thoughts and believe you know what it is from context, do you always ask for a reiepeat? How about at the party where the noise is loud? If the guy who is slurring his words comes up to you and you can't understand part of what he is saying, do you ask for a lot of repeats or nod a lot? :-)

I can assure you, Len, if I am ever handling military traffic because of a nuclear war, I will ask for fills if I miss a word.

Ed,

You said: "The results will be used by the manufacturers to set the standard at a level expected not to cause widespread interference to ham radio."

Does that imply that they aren't concerned about seletive or locally limited interference to ham radio?

Just what does "widespread" mean in their efforts to limit interference to my operations and those of other hams?

What about local interference by one of these devices to my operation if a neighbor installs one?

Cheers,
Bill K2UNK

ARRL members liked:
A PIC16F84-Based CW Decoder, Morgantini, Francesco, IK3OIL, QST, Aug
1999, pp 37-40.

Maybe you need a new set of "others" from which to solicit input. The
one you've got now seems to be misleading you.

Jon

While that may be a very specific mathematical answer, the
reality is that there is a practical point at which questions, while

technically different are still essentially the same.

I can ask:

What is the unit of electrical resistance?
or I can ask?
The unit of electrical resistance is?

Different questions but would anyone argue they
are essentially identical as to the memorization of
unit of resistance = ohm

Are you now saying that the ARRL has some legal hold
over study guides? Here again, you make this
non-specific statement to having an ARRL attorney work
with you as if that would create some special/new legal
aspects to testing that aren't now there. Without the
details your statement is meaningless as to the liklihood
of accomplishing your goal.

Cheers,
Bill K2UNK

Actually, I'd go so far to say that one actually
doesn't need to understand ohm's law at all to
master DSP. Thousands of people do systems engineering
work without ever getting into the BASICs you talk
about.

Cheers,
Bill K2UNK

That's a conclusion on your opinion only.
You are entitled to that opinion, as I am mine which
is to disagree with it.

Cheers,
Bill K2UNK

>While that may be a very specific mathematical answer, the
>reality is that there is a practical point at which questions,
>while technically different are still essentially the same.

Referring to your question about "resistance" specifically, the
reality is (1) asking about the unit of resistance is not a
technical question, just a definition and (2) a bona fide
technical exam won't be asking such a rudimentary question, even
at Novice level, on what the unit of resistance is.

And on a general level for actual technical questions, the
practical number of ways a question can be asked, a very high
number, will far outstrip the person's ability to "look it up."

Perhaps so much so that he thinks it is perfectly OK to disregard good amateur practice. We'll let him address that.

It's the same kind of attitude that Dick and others of his kind appear to have when they advocate some imaginary rights in amateur radio that the FCC doesn't grant. I used to let it go by, but no longer.

Even Riley has commented that the worst offenders often hold advanced licenses and are long time hams. If only the Catholic Church hadn't taught me to read, I too, could ignore Part 97.

```

Bash ONLY published test questions from PAST tests.
If the FCC did NOT change the tests then whose fault is that?
If a college class uses the same test questions year
after year, is that the fault of the study guide publisher?
In another post, Vince claims there's an infinite variety
for test questions. Assuming that is soo, then the FCC
could have given differnet tests every time rather than
repeating them as they apparently were doing.

> It makes NO difference if you or
>> anyone else thought it was cheating, the bottom line
>> would still be was it legal?
>
> And it was NOT legal.

It has NEVER ben tested in a court. The fact that a law may
have existed which appeared to make something illegal does
not offer the opportunity to state catagorically that the
illegal act would have been validated as illegal if a court
case was brought. Many laws get tossed by courts when
someone is finally prosecuted for the first time under the law
in question. No such case ever was brought by the FCC
against Bash or anyone else...therefore, no absolute conclusion
can be made as to the true legality/illegality of what Bash
did. We have and will only have opinions of what might have been.

>The fact that FCC wound up not prosecuting him
>for his violations in no way indicate that his actions which were very
>much in violation of law were legal.

Again, your opinion ONLY. The question is? Would the FCC
have prevailed in a case against Bash? That we will never
know the answer to.

> It is revealing that you would suggest otherwise.

It is interesting that you buy in so willingly to every
government law just because it has been passed or
promulgated by an administrative agency. Here in NJ
a few years back the state dept of Health passed
a regulation forbidding restaurants to serve eggs
over easy. The public and the restaurantors
told the dept of health exactly what they could
do with that law by totally ignoring it. Likewise,
the entire driving public routinely ignored the national
55 limit wor over a decade.

Cheers,
Bill K2UNK

You're shifting focal points again. Ham radio is still defined as
a "fundamentally technical" hobby. And the most rudimentary
part of that is knowing basic electronics. In one form or
another, you're always railing against learning the basics.
That's why I say you're basically a no-theory advocate.
That part of your postings _always_ comes thru loud and clear.

I thought it interesting that they didn't produce a single witness
who was denied his/her right to vote. All the witnesses voted! The
worst complaint was that there was a delay or something made someone
nervous. Jesse Jackson was conspicuous by his absence.

C the reason Jesse Jackson wasn't there is because folks sent him
some money for his cause, now that he has some spending money
he will be quite for a while, last seen at a KFC near you.

Ed, I went to see where his QTH was in relation to 1st strike targets.
Go follow the link from his personal data on QRZ.com.  Whatever his
capability after a nuclear exchange will be wasted on 3950.  I should
have caught on sooner.  Sorry.

They keep talking about witnesses and evidence, and everyone keep asking for witnesses and evidence. But, so far, I have not seen a thing other than talk.

> The worst complaint was that there was a
> delay or something made someone nervous.

Good point. Shortly after the election, there were complaints about police at some of the voting booths (it made some minority voters nervious). Of course, in some of the voting districts in the Miami area, I would nervious if there were not any police around. However, I don't hear much about that complaint anymore. Perhaps someone else pointed out what I just said, or I simply missed it. Did you hear it during the commission's hearing?

> Jesse Jackson was conspicuous by his absence.

Ah, Jesse. He does seem to be keeping a lower profile lately (perhaps the Republican demonstrators in Florida were more effective than they thought).

>
>73,
>Ed Hare, W1RFI

Ed:

I don't know. I can't personally relate to reading a 16-page study manual to get a General, or any other, amateur license. I became a ham after years as an electronics hobbyist, and passed my written tests largely on the basis of knowledge I had acquired over that time -- through self-study from a variety of sources, and hands-on experience in project building. I didn't get my ham ticket for the singular purpose of being able to empower myself by projecting my voice over long distances at the press of a button. Moreover, having had that capability for my entire career ham career, I've always sought, and utilized, more challenging modes. From a technical standpoint, I don't even approach the knowledge and experience that professionals such as yourself possess; but as an AMATEUR radio operator; I consider myself to be well-qualified to hold the highest, most distinctive class of license. I've had nothing handed over to me on a silver platter; in fact, I've had to get over years of whining for just that to happen before I realized that becoming a ham meant enough to me to learn the practical communications skill which is Morse/CW.

Ed:

I'd have to admit that a 5 WPM code test is better than none at all, but considering that this low maximum level doesn't do much to support continued advancement in this practical communications skill, and isn't likely to do so, I have to be realistic and admit that there is little point in keeping this requirement. For all practical purposes, 5 WPM is, in fact, "no-code" ham radio -- for that's what it gives us as an end result. The former, 3-tiered 5, 13, and 20 WPM code testing regime produced the kind of learning challenge which actually brought new CW operators on-the-air, using the Morse/CW mode. All 5 WPM will do in the future is put an HF microphone into someone's hand or on their desk -- and force us CW operators to hand over large chunks of spectrum presently used by that mode to support growth in the usage of HF phone. Having it "my way" is irrelevant. Human nature being what it is, most

people will take the path of least resistance in order to achieve
the greatest amount of instant gratification.

>> Hah! That'll be the day!
>

>But that's what you're doing by making your claim about the 5 WPM test.
>You might consider tempering your comments about it.
>
>73, Jim AC6XG

Jim:

I learned Morse code at speeds greater than 5 WPM because
it was the current requirement to obtain an Extra-class license!
If the requirement hadn't existed, neither would my achievement --
and I would not have benefited from the enjoyment of reasonable
proficiency in this practical communications skill. It's as simple
as that.

 Cecil,
  Do you think the N.A.A.C.P. Should Boycott KFC?
   they are really raising hell here in S.C. about the flag issue.
 they even went after a Columbia,S.C. business man because he flies
 the confedrate flag at his restaurants.
 Anyway next time you look at a KFC commercial look very closely and
think! I remember KFC commercials with the colonel standing with a
family having a picnic behind him talking about good food and family
tradition, today you see a commercial with the colonel ''Moon
Walking'', High Fiving, Shucking and Jiving and Rapping.
 Wheres Jesse and the N.A.A.C.P. on this slap in the face?
  just a thought.
   Donnie

billsohl@mindspring.com (Bill Sohl) wrote:

>If a college class uses the same test questions year
>after year, is that the fault of the study guide publisher?

If a college (or the Bash era FCC) does not combat cheating by changing the tests frequently, does that make the person who uses the illicit material any less of a moral cheater?? Is it OK to steal physical property just because someone is careless with it?

>It has NEVER ben tested in a court.

How about in the court of morality?? Did you use those fraternity cheat cheats to get through college, even though there might be no *legal* law broken??

>It is interesting that you [Vince] buy in so willingly to every
>government law just because it has been passed

If (for arguments sake) there wasn't a law (during the Bash era) forbidding the publishing of confidential federal test material, then don't you think that to have one would have been reasonable? The reason being to protect the sanctity of the testing process from both the commercial cheaters and from the buying (soon to be ham) cheaters??

The first message is good advice for those just starting to learn morse...
if you can learn it AND do all your copy by writing in script V.S. printing,
you'll find that copy at higher speeds (as you reach those speeds) will be
easier.

> On Sat, 16 Dec 2000 22:33:15 GMT, "@!@" <ezypezy@ureach.com> wrote:

In answer to the second message....
Time-wise, if you spend 20 minutes, 2 - 3 times daily, EVERYDAY (note the
emphasis!) you should be able to pass a 5wpm code exam in a lil' over 2
weeks, maybe 3. (Seems to be about the norm for what I've seen as a VE).
I've heard the excuses before about 'not having the time'... but I doubt
there's many folks who can't find 20 minutes, twice a day, to devote to code
for a few weeks (breaks @ work, get to work a few minutes early, park, and
practice in the car, get up a lil' earlier & practice before leaving for
work/school, skip a TV program, etc, etc....) If you WANT HF privileges,
you'll FIND the time, if not, you won't.

As for "fun".... I and many others I've helped reach 5wpm have all used the

Gordon West 5wpm learning tapes. He's kinda' corny on the tapes, but some
of the corny jokes and puns help the lessons stick in your head longer.

Another point is to write (or print) small. It takes less time to
write small letters and by writing 2 lines in the paper space allotted
for one line, I've found that I can increase my hand copy speed

substantially...

Wow, now that's dictatorial solipsism of the first rank. Certainly as good as the most rabid caller into any right-wing talk radio program. In other words, when Vince is appointed dictator, THEN things will be run right. Sorry, didn't work for Genghis Kahn, didn't work for Mussolini, won't work for Vince.

I get the impression, from the personality he has displayed on this newsgroup, that Vince would quickly tire of any collaborative effort.

Especially one where compromise, and tailoring to a realistic world with realistic constraints, are involved. The ARRL members in the Hudson Division probably suspected this when they voted against him (by a 2/3 or greater margin) for their Director four times in a row. This may also be why we will never see Vince sitting on the NCVEC board.

Vince might benefit from that old Dale Carnegie book, "How to Win Friends and Influence People."

The charge today can be up to $10 per fcc regulations.
The limit is $10 though.  It was $6 when I got mine 7 years ago roughly,
course that VEC didn't charge the full rate, I think the max they could
charge was $7 or something.

Glad to see I woke you up finally, Paul. But you neglected to
mention the fact that the fellow who won ran along a no-theory
approach as well, which is one of the reasons we are where we
are. To paraphrase him "you know, there's no reason for Amateur
Radio to be a technical hobby today, simply because there's no
jobs for engineers. You know, my father was a plumber, and
advised me to do the same. Looking back on it, you know, he was
right." Go ask him, he's one guy who is still alive.

Winning friends and influencing people isn't my bag, Paul. The
goal is trying to save the Service, not deep-six it.

Regards, Vince WB2EZG

I don't think that's 100% true, but close. The state of the art today is set by far-end professionals in the biz who have access to pricey CAE software, custom chips, board fab facilities, deep pockets, long list of assets which even most technically astute hams don't have today let alone the rest of us who homebrewed back when. It's just evolutionary reality which started in spark days when somebody decided to make radio parts for money and sell 'em to hams, 1910 or so.

Are you implying that you must be forced to do something before
you get anything done? That sounds like sheer laziness to me.
I learned Morse code before I ever heard of amateur radio simply
because it was fun.

Different strokes for different folks, Larry. After Tiny Tim tried
making a baby, he said he hoped he wouldn't ever have to go through
that again. :-) Some people feel that way about Morse code.

You would loose that bet as well Cecil, I still am better than you because I do CW and you need to admit that you are incapable of learning a simplistic digital transmission scheme. What did you do 50 years BDSP (before DSP).

A man needs to know his limitations, and the sooner all the CW challenged people admit it the better.

"Cecil" <Cecil.A.Moore@IEEE.org> wrote in message

> > As a ham for almost 45 years, and 62 years on the planet ...
> > I really feel it (CW) makes me better than you!
>
> Tough Titty, Fred. I'm the same age as you, have been a ham five years longer than you, and I say you are not a better ham than I am simply because you can copy CW faster than I can. I'll bet I can run circles around you in the programming of DSP systems and/or designing digital logic systems. That obviously makes me better than you. (How do you like your very own words thrown back at you?)
>
> Each of us has something to contribute to this great hobby. Feeling superior because you can do fast code is a ridiculous way to live your life, IMHO, because as CW becomes more obsolete, you lose your self-proclaimed superiority. In my mouth with no hands, I can tie a cherry stem in a knot while copying PACTOR II. Can you do that? If not, you are certainly an extremely inferior ham.

Brian, I will answer your post later. I am in the process of practicing how to send poorly formed characters to screw over the inferior technicians that have to use computers to copy code.

Texas is way out on the fringes of the Old South and I see black
guys on Harleys wearing Confederate battle flags on their heads
and jackets. In Texas, the Confederate battle flag is not a symbol
of slavery but is instead a symbol of rebellion, akin to the
"Don't Tread On Me" flag of yesteryear. Here in Texas, it says,
"I'm still a rebel".

I gave no "specifications," just generalities of a project personally witnessed...followed by some offhand guesses of a similar project.

If you've ever done any real programming, you know that few of them are "simple." I do not count programming exercises such as those displaying "hello world" on the screen as real programs. You made some claims without mentioning any personal experience in programming or which publications had listed goals of morse decoding other than some vague generalities that "early magazines used to print [source] code." Oh, wow, and you criticize others about "specifications?"

Let's talk about "specifications." Let's assume an ad from the mythical Kilowatter Antenna Company. Which of the two phrases below would you say are specifications?

Forward gain is 12 dbi min., F:B ratio is 16 db minimum.

"The Kilowatter Swatter-20 gave me DXCC in a month."
[testimonial of Floyd Sphergometer, W2##]

The phrase at the top is the obvious specification. The one at the bottom is just a claim...something that could be done with an ordinary piece of wire when ionospheric conditions are just right. Forward gain of the "Swatter-20" will hold regardless of the ionosphere and remains constant. The bottom phrase is emotional loading to convince the reader they should buy Kilowatter's Swatter-20 but doesn't say anything specific about performance.

Given the price of Kilowatter's Swatter-20 at $895.95 (list, shipping extra) would you consider buying it solely on the claim of being able to DXCC in a month? Or would you compare its specifications and price to other antennas first?

When you mentioned a morse decoder using an 8080 CPU with 16K of memory you didn't really say anything about its performance. You really only said one existed based on remembering one seen as an article in a magazine. My personal observation of a single decoder project stated more conditions along with the Goals of the project: Rate adaptation, timing adaptation to a certain tolerance for dot/dash/spacing, achieving the lowest possible signal-to-noise ratio. I had only touched on "specifications" remembering that the lowest rate was about 3 WPM morse equivalent and a tested maximum

of 90 WPM morse equivalent. Who said more about a
thing? Me who stated some numbers based on
performance of a working program or you who mentioned
seeing some magazine article?

>A little comedy? OK. I always got a chuckle out of your we-we jokes
>about hams always using the word "we".

I don't say that about "all" amateurs. I only say that about those
who presume to represent all US radio amateurs as having the
same goals-likes-dislikes-fetishes as they.

That is extended to include certain anonymous posters who have
never given their license call.

Now, now, you are getting a tad testy there, Ed.

There's a common expression in American English, "I've never heard of such a thing!" It is usually spoken with some accusation and punctuated with a verbal exclamation point. Very common expression, not limited to one geographic region.

Do I know the entire scope of activity in radio? No.
Do you know the entire scope of activity in amateur radio? No.

Nobody can know everything happening everywhere.

QST and QEX combined cannot print everything that is done in US amateur radio. The entire published works of the ARRL cannot print everything done by everyone in US amateur radio, let alone done by all hobbyists in radio and electronics.

I described, in general terms, a programming experiment that was done by a non-amateur person with a slight assist from me, another non-amateur person for the purposes of trying to make an adaptive morse code reader. That was not for any sort of purposeful use in amateur radio activity but rather as an intellectual exercise. Intellectual since morse code is not symmetric as are other codings used in electronic communications. After over a century of existance, morse code is fairly stable in structure and any variations are due to human operators both in rate and dot-dash timing relation.
To anyone involved in any sort of communications by electronics, morse codings are unique. Morse codings are also involved with over a century of mystique and claims which generally have the human operator triumphing over mere "machinery" and claiming superiority. On that basis the exercise-experiment set out to prove that a computer could emulate an experienced morse operator over a wide range of signal environments.

The exercise-experiment was witnessed by two experienced morse operators, one that I saw personally, one that I did not see. A simulation of 90 WPM equivalent morse rate was done where the computer program was able to decode clearly and accurately but neither experienced operator could "read" at that rate except in a few bursts.

As far as I know, none of the participants or their friends and families have ever communicated this experiment in public.
Does this mean that the experiment did not exist? No. All that means is that this particular project was never

publicized. There is no more "philosophy" discourse on that than for any other project or experiment still being worked on but not yet published. There is no more "philosophy" or existentialism on its "existance" just because so few knew of it. Granted, there have been similar projects undertaken, including one attempt to real-time decode morse on a programmable pocket calculator. Do I know of all of them? No. Do you know all of them? Probably not.

>What is your estimate of the percentage of population that believes that
>things they don't know about cannot exist?

I haven't the foggiest idea. All I can point to is a very common American expression which started out this reply.

>Did you ask the question because you feel
>that I am in that percentage?

No. My public message postings are assumed to be read or skimmed by all who have access. My remarks are to them as well as individuals. In general I've found that strict traditionalists in US amateur radio believe that everything done in US amateur radio is all contained in the publications of the ARRL...but that is my personal observation.

>You're referring to FISTS?

Hello Jon, welcome back? :-)

I used the word 'membership' in my sentence. I have no doubt
that FISTS members are also members of the ARRL. However,
I was not referring to just FISTS members but rather the general
ARRL membership...and the general editorial policies of QST in
regard to selection of material to publish.

>> I don't think so based on input from
>> others concerning their expertise and "necessity" of manual

>
>ARRL members liked:
>A PIC16F84-Based CW Decoder, Morgantini, Francesco, IK3OIL, QST, Aug
>1999, pp 37-40.

All the members liked that? Some members liked that? A few
members liked that? With 170 thousand or so members in the
ARRL, was there also a Poll done to ascertain who liked what?
How does the ARRL decide on what is liked or disliked?

I'm sure Morgantini's article has some merit, is interesting, well-
motivated, and was certainly based on a lot of thought and work
on development of the PIC coding. All such programs and
innovations represent a lot of personal effort.

>Maybe you need a new set of "others" from which to solicit input. The
>one you've got now seems to be misleading you.

Jon, from what you've written, I daresy you are rather
uncomfortable with my opinion. :-)

As a non-subscriber to QST, I cannot hope to compete with an
ARRL staffer who has ready access to the full line of ARRL
publications. I am not critiquing individual QST articles but
rather expressing an opinion on the attitude in general of the
ARRL relative to morse code...over the last few decades...and
the attitude of the general membership of the ARRL relative to
morse code proficiency being the paramount achievement in
US amateur radio.

I readily admit to not knowing the entire scope of amateur
radio activity as practiced by over a half million licensed US
radio amateurs. To be fair, you should admit the very same

thing. Being an ARRL staff member does not give you some
magic powers to know the entire scope of amateur radio
activity...or radio activity that is possibly related to amateur
activity.

Prices keep going up on everything. More features, greater band capability equates to more money. If you think that is bad, look at the ones which have an integral spectrum analyzer for receiving... :-)

>> Yes, I agree that the 220 MHz band transceivers are scarce.
>> Saw only single-band and dual-band models from four
>> manufacturers covering that band.
>
>The auction is coming . .

Off-hand, based on FCC notices and the general electronics trades' info, the more important bands for commercial applications have moved up beyond 900 MHz. The drivers for moving well up into the microwave region are various wireless applications and the ability of semiconductors to work well into tens of GHz. I'd say the 220 band spectrum is going to stay as it is for a while.

>> I haven't seen any regulation yet on banning homebrew
>
>Nobody has the time to scratch-build and chasing parts is expensive and time
>consuming, there's just no ROI on the dollars or the hours unless it's for
>experimentation. Kit building seems to be on the upswing, however.

The "ROI" thing is individual and subjective. The technology is known, but the sources of information on it are scattered.

Two examples are the Stoner-Goral-Company's SGC-200 and Elecraft K2 transceivers. Full circuit details/schematics are available over the Internet. One can find nearly all of those circuits' design info in ARRL publications, even the crystal filters which are hard-wired in from supplied individual crystals. Microprocessor "control glue" programming is NOT available, though, and both depend largely on those micros for functional control and display.

In the world above 30 MHz, the design details are truly scattered over a number of texts and Application Notes from a number of manufacturers (Motorola, ADI, National has most Appnotes on-line at their websites). Test equipment for the VHF and above range is very expensive, even if bought from third-hand dealers (presuming those dealers check calibration). One can't make a SOTA radio project without calibrated test equipment...probably why so many project article authors are working as pros in electronics companies where they can accurately measure radio performance.

didit

PS: Keep a 3/8" open-end, closed-end wrench handy. It is just right for SMA connectors common at commercial VHF and higher RF stuff. I think it replaced the pocket protector as an RF-nerd sign back in the mid- to late-70s. :-)

Good idea..... used to do that with every sign I'd see, license plates, and even sometimes with the newspaper... any practice is good practice.

This web page with the same applet works better on my machine.

http://homepage.mac.com/k6mam/MorsePractice/MorsePractice.html

Better yet follow the directions and download the .jar file to your machine and pick up a copy of the SUN java runtime environment and use it locally. It allows you to save your place and not have to highlight all the characters every time you start. Using this applet I was able to pass my element 1 after two weeks. This is a very fine tool and has everything you need including instructions on the Koch method. The price is right as well! Thanks to Martin Minow for the development.

>That part of your postings _always_ comes thru loud and clear.

Bull! I have never advocated no theory and my
record is clear on that. Your personal opinion of individual
comments is exactly that...nothing but your
personal opinion. My comment on DSP was simply
stating the fact that there's no need to know Ohm's
law to understand DSP...you translate that to state
that indicates I don't support basic knowledge is pure
bunk.

The question is WHY is the material confidential?
Clearly the congress thinks there's no reason to have
confidentiality of such material...and I agree.

>The
>reason being to protect the sanctity of the testing process from both
>the commercial cheaters and from the buying (soon to be ham)
>cheaters??

So how come colleges seem to do just fine without such
laws? If colleges get by OK, then the Feds don't
deserve any special protection by laws.

Who is advocating a ONE license "fix?"

As to the zero-WPM...that has nothing to do with
fixing any problem other than the recognition of the
fact that there is no longer any valid reason to
test for code knowledge. It's that simple.

Hey, slick, do you send 35wpm on 3950? Rhetorical question. Don't
answer. Go back to 75M fone. Riley will cite you sooner or later.

Sayonara baby.

Perhaps a "Letter to the Editor"...??? Gallup and other polls manage to determine to within a certain percentage what others are thinking by sampling only a meager number.

> Jon, from what you've written, I daresy you are rather
> uncomfortable with my opinion.

Nothing in Jon's letter revealed any "discomfort"...Disdain, perhaps...but NOT discomfort.

> As a non-subscriber to QST, I cannot hope to compete with an

> US amateur radio.

You admittedly don't subscribe. Unless you are using this as a smoke screen for reading other's copies (mooching) or paying full price at the stand, HOW can you even BEGIN to form an INFORMED opinion on what ARRL members think when you don't have the journal in front of you?

Is this the type of investigative research that ENGINEERS are known for, Len?

> I readily admit to not knowing the entire scope of amateur
> radio activity as practiced by over a half million licensed US
> radio amateurs.

Then the MAJORITY of your posts and rants in this NG are, esentially, baseless. Without the scientific employment of true polling techniques, your "opinions" are at best, nothing but emotional sludge. A hatred built upon your perceptions against Amateurs based upon your military and dubious professional experiences, but in no way based upon any practical experience as a Ham.

> To be fair, you should admit the very same
> thing. Being an ARRL staff member does not give you some
> magic powers to know the entire scope of amateur radio
> activity...or radio activity that is possibly related to amateur
> activity.

No magic powers, to be sure, but he, UNLIKE YOU, is involved in the day-to-day activities of Amatuer Radio. I would take any one sentence of Jon's assertions over any 10 pages of quotes with footnotes from you simply because I know he's knee deep in Amatuer Radio.

He knows. You don't.

Perhap if YOU were, your posts might start to reflect some reality. But I doubt it.

Steve

Not much CW on 3950 Brian. I guess if the local newspaper reports a killing, you assume they are murderers?

While I may or may not support any activity on any freq, the fact I have a link to a site does not imply, nor should you infer my personal position on that link.

The only other person who tried to make these type of connections lives in Mass and is a certifiable nut case, should I infer that you are as well?

I am sorry that your little butt is chapped because you don't know, nor can you learn CW, but that's the way life goes!

> The idea that FCC, while downgrading all code speeds should then invoke
> some closely toleranced "specification" shows just how far you are from
> reality.

Wake up Rip Van Winkle. The specification of Morse Code hasn't changed much since 1834. You've had 166 years to get it right.

> But that's nothing new for you, is it?

Dick, go join your bud, JLE (Jelly) on 3950 and show us the man you've become. Oh yeh, be sure to use code and send accurately, unless you're the drunk one who utters the vulgarities.

How could you tell, Len? You still can't answer direct questions put to you with unambivilent parameters.

> Ok, so I'm using my early adult experiences. Military
> communications isn't amateur radio communications, but is
> amateur communications requiring guessing of morse

Perhaps if you were ACTIVE on Amateur Radio traffic nets you'd KNOW that "by guess and by golly" are NOT standards for "word counts" or missed words. REGARDLESS of the mode.

> Is guessing necessary in all those ham traffic networks
> using only morse? Several long-timers have made much

> guesses.

I have missed far fewer "charachters" on Morse nets. You don't have accents, speech imediments or other anomolies of the human factor.

You can equally discount those anomolies in digital traffic, but not everyone carries a laptop and TNC with them. Simplicity.

> There's no polls available to verify all those who've expressed

The quarter million NCT's to whom you refer have not stopped at NCT, either, Len. Some have, but most have at least taken the 5wpm to be a "Tech Plus", if not General.

The license demographics are fluid and dynamic. Nailing them down in ANY kind of a poll would require a very wide spectrum polling.

> "Thousands upon thousands" is a carefully chosen term I

And proof that YOUR forte is wordsmithing, NOT Amateur Radio.

     Oh my, general purpose creep who disdains anything Patriotic
or "The American Way of Life", and continuing to make irrelevant and
racist commnets where none was offered.

     Andersonian to the hilt.

That a real problem with you, you're separated from reality far too much.

Haven't they hurt enough people already? They've made generations of

Americans dependant upon them, they wave the racism flag while making every American declare their color on government forms, they embrace socialism and want to abandon the greatest form of government that has ever graced the earth.

```

It requires one active debvice to tie the knot and then how many tens of thousands or millions to do the PACRTOR? Meanwhile with a handful of active devices Fred works the world on CW, using his personally learned and developed skill. All the programming you can do is for naught without the complicated hardware to implement it, assuming the software doesn't lock up the machinery instead of working as intended-far too often the case.

You'll never win this argument. There is no mode that can favorably compare with CW on its own turf. The only way you can kill it is to do your best to downplay its advantages so that newcomers won't want to learn it.

I "heard" from a bed-wetting liberal that police "roadblocks" (probably traffic control near the polling locations) were scaring away minority voters. No reason to be scared unless they didn't have a green card or had a warrant out for them.

Besides, most cops I see are minorities. I just don't get it.

Can't you just imagine? Instead of tuning the band for the 'weak ones'
we can tune among the spreading sequences to see who's on the air today.
Whoopie!

Not as boring and you find you are spending a whole lot of time practicing
without really trying.

Just don't pay attention to that dit dah crap if its still around. Such
nonsense. They sound the same ones just longer than the other.

Exactly what is the conceptual difference between looking at a
digital frequency meter and looking at a digital spreading sequence
meter? Is 12345 a frequency or a spreading sequence?

Hey, they couldn't do any worse than you. Swing by 3950 and give your
buds a hi-5 at 65wpm.

What? No added swing? No Banana Boat Swing? No Lake Erie Swing?
No Eastern Superior Swing? No extra dits at 65wpm?

Just sterile W1AW-like code?

I'm suprised you didn't miss a few karakters from sheer boredom.

You guys butter your bread on both sides, don't you? Not a consistent
one in the whole lot.

Go swing by 3950 and give your good buddies a hi-5.

Yep. Your mind was made up the day you tried to operate the Novice band and no one answered your CQ. That was the end of the beginning for you, and you moaned and whined nonstop, to he exclusion of all other constructive activity, for the next dozen years, until Uncle Sam finally decided that your poor pitiful plight needed relief, in the face of the facts.
So now you claim some sort of expertise on 'poor amateur practice'. Of course you can't recognize it when you see it, since you see it in the mirror each and every morning and haven't yet recognized it for what it is.

I've heard there are a few unimaginative sheep who blindly adhere to
that protocol.  Most good CW ops prefer to add some personalization,
however.  Come back and play when you'd like to be a real CW operator,
as opposed to an automaton.

Good luck on this one now!

OK Mr. Genius, please tell us about your one transistor CW transceiver.
Must be nice not to have to have a store bought transceiver.

The point is: If I can use all the Morse short forms in PACTOR, then
if Morse is a language, PACTOR is also a language. Do you really
think PACTOR is a language?

A transistor can tie a knot in a cherry stem?????

> You'll never win this argument.

I've already won the argument, Dick. I can communicate just as well with
a non-English speaking ham using PACTOR as with Morse code. I can do
it without any Morse code whatsoever. So are you going to tell me that
PACTOR is a language?

That wasn't even a credible try at obfuscation. Bash was publishing the questions and answers to **CURRENT** FCC exams. Who would have wanted them if not?

You sure are some logician, Slick.

His superiority will get traffic passed on radiotelegraphy. You know it. Brainless Burke knows it. NCI in its entirety knows it. ARRL knows it. FCC knows it, and even acknowledged it- "We believe that knowedge and skill in Morse code ....etc."

So go right and deny it till you're too stiff to work the keyboard, it changes nothing whatever of the facts.

You seem to be saying that no individual college exam is that important in itself, but the entire course, as evidenced by the degree, is.

Doesn't compute.

Either a test is valid and shows to some degree of confidence that the examinee has absorbed a minimum level of information, else he doesn't pass the test. Any test that doesn't........ well, fails the test.

Maybe so, maybe not. It would depend on how often the FCC changed
the exams and/or how many different exams they had, wouldn't it?

Isn't it amazing how the politically correct view pride in anything as "sick".

If they can not achieve, the rest of society must dumb down so they won't feel inferior.

And woe be it unto the person who dares to excel at anything, they have to be racists living in the past. I had to work racist in there somewhere, they always do.

Poor Aaron, can't copy CW and he needs to have someone tell him it is because he is a better person than those prideful old hams that can.

Aaron meet Brian, you can commiserate with each other, only on phone of course!

Nice sidestepping. Was dance your major?   :-)

>The question is WHY is the material confidential?
>Clearly the congress thinks there's no reason to have
>confidentiality of such material...and I agree.

More sidestepping. The question was the morality of the Bash situation. Try not to give in so much to the politician in you... :-)

>So how come colleges seem to do just fine
> without such laws?

They have rules. Do you really think trying Bash's technique at a college would fly?? You would be out on your *** quick...

Agreed. I have never thought that it was the *amateurs* fault. The
same thing has happened in other hobbies. Cars and computers are two
examples that come to mind...

Wrong Len.
That was *4KB* of memory, not 16KB..

>you didn't really say anything about its performance.

Wrong again Len.
I said it did a "great job"...

>You really only said one existed based on remembering
>one seen as an article in a magazine.

Wrong again Len.
I said my old computer had used such a program.

Here is my original quote:
"...My old Interact computer using an 8080 at 1 MHz
with only *4KB* of memory did a great job of Morse and
RTTY decoding..."

Your memory seems somewhat faulty Len,
maybe you need to upgrade... :-)

It happens. Some are the victim of strokes, and may have no facility of speech remaining. A coiuple years ago I heard a very hesitant extremely poorly sent CQ and answered it. The copy was horrendous, barely possible at all. The station was an Extra class, had a very old callsign, over 30 years old, and was not a vanity callsign. We completed the contact with difficulty. I'd wager that fellow had some sort of extreme physical impairment. That may well have been the *only* means he had of communicating at all. It happens. I've read of quadruplegics who use a "puffer" switch to key their rigs by blowing air through a straw.
 But BrianBurkeTurkey would have Riley cite those guys for "poor amateur practice". Shows where he's coming from. As far as I'm cncerned he can go back.

 Your problem, in part, is one of perception, and it shows evidence of
being a problem of lifelong standing. At this late juncture it seems
unlikely to be cured in time to do you much good. Sad.

Dick, your powers of reverse psychology are underwhelming.  Now that
Kennard has resigned, who are you going to blame for demeaning your
station in life?

Try QRZ.com's 1993 callbook page. Otherwise, write the FCC to get the letter that confirms issuance before the magic 1987 date.

I was talking yesterday to a fella who has spent some time in Africa, and he was telling me about conditions there. He said "If I was a black person I'd thank my lucky stars that my ancestors were slow enough to get caught and sent over here". Instead they got Big Jesse and his stuff.

Wrong. Although the ARRL and other VEC's may charge $10, there is NO REGULATORY LIMIT, having been removed by a 1996 law change that was previously overlooked.

There is still a general requirement that organizations not PROFIT from amateur radio operations, so any fee charged must be relatively close to or equal cost. The ARRL computed this as $10 to cover its costs, which includes $4 that the VE team may retain for their share of the expenses. The part where fees may be charged for testing costs (or code practice) are still in the regulations.

The alternative way of getting a license, similar to the "Betty Ford" rule for
CB, but no marriage or continued commitment required.  Better hurry - only 6
days left for "special handling."

However, what's interesting is that neither Paula Jones or Monica Lewinsky have
become licensed (to my knowledge) in the amateur radio service.

 Talk about subjective. Who says who is ordinary and prudent? Only in
court.

Dick Carroll <dixie@townsqr.com> wrote:
> When it comes time to do CW, and nothing else, what are you?

I'm a CW ragchewer. My average QSO lasts for about 30 minutes to an hour. These days I generally do 1 to 2 QSOs a day. I don't work DX. I hate contests because they ruin my ragchewing :-). My top head copy speed is around 40wpm, however most of my QSO's are in the 25wpm range. I use a keyer with standard weighting. I don't own a straight key or a bug. I enjoy CW mobile. I keep a CW homebrew computer log. It's over 3000 QSOs now. I dabble in CW computer programming. I don't belong to any CW clubs. I have a number of regular CW friends, some of who are way over the 150 QSO mark in the log, but I keep no skeds, handle no traffic, and visit no nets. I simply enjoy using the mode...

>Inferior to someone who was too lazy to learn it [code]?

You're talking about me. If it wasn't required for my General, I certainly would never have learned the code. And even after getting my General, I didn't start regularly using CW for another 30 years. Yes Dick, I used a mike almost exclusively for 30 years. I'm that guy with the mike in his face that's been described here so often. If there had been no code requirement in 1957 (my Novice) or 1959 (my General) I can safely say I would have never learned the code. I was (am still) too lazy...

On reflection though, I think I must apologize to W4JLE. My attack on him was somewhat sanctimonious. While I strongly disagree that one ham

is "better" than another ham simply because of his CW ability, I could
have better worded my thoughts...

BS. You learned the letters, you never have learned it to fluency. Hence your 5wpm Extra.

Excepting the segment of hams who learned CW in the military, then later became hams (many did it in the reverse mode, went into service as hams then became military CW ops), almost ALL hams who learned CW to proficiency at 13 o 20wpm did it not because they found it attractive, actually the reverse was most always true. They tolerated that unpleasant task solely because they wanted the HF ham license.In the process of learning a high percentage found what Morse code communications really is about, and went on to like the mode and become effective trained operators.

The exceptions are the few dingalings like Burke who just sulled up and stonewalled themselves, preferring to resist by forfeiting a HF license in favor of "I want". Self-flaggelation at its finest. Of course there were few of them.

The Proof? Easy. The resounding "wet noodle" flop that has been Restructuring.

His butt is far worse than just chapped, its's totally hide-less. He's been this way so long he knows no other way to act, and is showing that he has no aptitude to learn. I see no hope for him.

Why shouln't the FCC have made up new tests to avoid
the "problem" of people making past questions known?
Vince said there's an infinite variety of questions.

I'm not blaming anyone for anything. IF the issue
is the constant re-use of the same tests, then that
is the FCC's problem...NOT Bash's.

>My analogy was that it is like blaming the
>theft victim for being careless with her property, or blaming the
>professor who is not careful with his tests...

Removal of phisical property by theft is NOT
a good anaology. On the other hand, the
college professor that reuses last years tests
has no one but himself to blame if students have
copies or share the questions from prior tests.

Lets report the facts fully and accurately. The complaint against this restaurant owner was not just that he flew a confedrate flag in front of his restaurants, but also that he also used displays of the civil war as part of the restaurant's decor (this is SC that we're talking about). Furthermore, the NAACP complained that his bookstore (a rack of books in one corner of the restaurant) contained "racist" books that glorified the civil war and slavery.

Less troubling then the boycott of the restaurants, was the boycott by local grocery stores of the popular barbeque sauce produced by the owner of the restaurants. Winn-Dixie, Krogers, Piggly Wiggly, Harris-Teeter, Bi-Lo, and Food Lion, all joined in the boycott by dropping the barbeque sauce. No local grocery store joined in the boycott, and two of the six stores above have restocked the barbeque sauce following complaints by customers.

Now, whatever your feelings are about the civil war, slavery, or the confedrate flag, it is clear that this boycott by the NAACP is nothing more than an attempt to censor the views of this businessman. And censorship, no matter who is doing it, is not that this country is supposed to be about.

The confederate battle flag is not a "symbol of slavery" to anyone displaying that flag. I have not heard a single person, who displays the flag, advocating a return to slavery. Instead, the battle flag is a symbol of State's rights to most southerners (resistance to big government), and a flip of the middle finger at those who criticize the confederate states (especially those who insist the civil war was about slavery).

I saw an article, with similar sentiments, a couple of years ago, written by the black editor of the military's Stars & Stripes newspaper following his return from an extended tour in Africa. In the article, he said that his trip to Africa changed his entire views about race relations in the United States (he then went on to criticize those blacks in American who fail to appreciate the opportunities they have).

Another is short-hand.. ;)
I learned "note-hand" (an abbreviated version taught for easier note-taking
in class) which makes it much easier to keep up. I admit I still have a hard
time deciphering what it was that I wrote down, but.. getting it wrote
down's easier.. ;)

Yep. Whatever happened to individual honesty and honor? If a student
is cheating his way through college it's the professors fault...

>It [cheating] goes on all the time at colleges.

And that makes it right??

Phil -

Thanks for the detailed listing. This is precisely the program I was
referring to, but I was off by 6 months. (I thought it started in Jan
77.) I've added some comments to explain the dates.

This added the ability to pick a specific call, but did not change
eligibility.

>   3.   Effective October 1, 1976, anyone who had held an Amateur
>   Extra class license since prior to November 22, 1967, could

This date (Nov 67) was to preference hams who held the Extra prior to
incentive licensing.

>   4.   Effective January 1, 1977, anyone who had held an Amateur
>   Extra class license since prior to July 2, 1974, could select

This was the original date of the NPRM that created this process.

>   5.   Effective April 1, 1977, anyone who held an Amateur Extra
>   class license since prior to July 1, 1976, could select one

This was the effective date of the R&O for this program.

>

One minor correction of what I think is a typo, though, Phil. The
present vanity call sign system started earlier than June 1997. For
example, check W3OR. He was granted a HV (vanity) license on 4 June
96. The FCC Report and Order was adopted on Dec 23, 1994 and released
on Feb 2, 1995. You can find the complete text at:

www.fcc.gov/Bureaus/Wireless/Orders/1994/fcc94343.txt

Some comments which might aid homebrewers -

Pricey CAE (Computer-Aided Engineering): The ARRL Radio Designer program set is, what, $150? Allows a circuit breadboard analysis without buying any parts. Anyone can download Demo versions from at least three different software houses who build on the free SPICE program core. Circuit analysis using the computer as a breadboard is much faster than building it from real parts, no one gets solder burns, don't have to buy the components first. Modeled correctly, a SPICE analysis will work identical to the real thing.

The same for PCB layout programs, at least two Demo versions having limited size and number of components. Lacking that, a pad of vellum paper and some colored pencils work out very nicely...but does take a lot longer to lay out PCB traces manually.

Custom chips: Not needed for nearly all amateur applications.

Board fab facilities: For one-of-a-kind boards, one can get various kits for making PCBs in most electronic stores. You can choose from room-light exposure to sunlight exposure from 1:1 scale layouts. Etch them over the bathroom sink. Clean the foil before and after etching with ordinary kitchen cleanser. For small jobs I do 1:1 layouts, drill the PCB first, use the drill holes as a guide to paint on resist made from thinned-out lacquer, then etch with ferric chloride. No problem but it won't make 0.025" spacing lands and trace spacing, though..

Deep pockets: That's up to the individual on how much they want to spend. There are pro PCB houses who will do one-of-a-kind prototype boards, even do layouts first, but at a price. A few will also do assembly using controlled-heat ovens, you supply the parts. Ads in the electronic trades.

SMT: While not stated, this is a big problem for folks who can't see fine detail or who don't have steady hands. I would suggest scrounging around for discarded consumer electronic boards to practice unsoldering and soldering with suggested soldering tools. Craft stores sell nice, inexpensive headband magnifiers for looking real close (cross-stitchers like that type). If the circuit allows component value measurement, measure before and after to see if too much heat was applied for too long.

>It's just evolutionary
>reality which started in spark days when somebody decided to make radio
>parts for money and sell 'em to hams, 1910 or so.

There are many places that will sell small quantities of electronic parts to anyone. Several hams have lists/links to such places. Allied Electronics has their entire current catalog on their website. Almost the same for Digi-Key. All Electronics, two stores in L.A., have a lot of manufacturer's surplus of many kinds. Fair Radio Sales is still in business and advertising on the web, still carrying military surplus (but of limited types).

Things that won't be found or are very scarce: Variable caps other than trimmers or AM/FM radio two-gangers. Tube sockets and shields (lots of locations carrying replacement tubes of many kinds). Some ICs that were once common 20 years ago.

A treasure for those working in RF from mid-HF on into the microwave region: Mini-Circuits passive and active components. Anyone serious about VHF+ homebrew ought to have their catalog (order it via website)...contains good info on component specs, how measured, etc. Harvey Kaylie's company sells onsies to thousand-plus lots, no problem. Good rep. in the industry on quality.

>For my own part I hombrew all my antennas including beams and I'm
>mulling building a single 3-500Z amp. Not much else left worth
>hombrewing.

Anyone wanting to homebrew solid-state PAs can contact at least one website that sells parts or kits of parts for Helge Granberg's series of Motorola Application Notes (their PDFs have much larger file sizes and poorer repro than Motorola's website, go direct to Motorola for the AppNotes). The ARRL TIS has at least one article repro on PAs based on the Granberg AppNotes.

Some of the older-package DIP ICs are still available, such as a Motorola phase-locked loop IC with everything available on-chip in stock at JDR Microdevices. There's also some prescaler ICs in DIPs that will work to 1.2 GHz for counting down to a PLL input. VCOs (Voltage Controlled Oscillators) in DIP or discrete thin-film are now the general choice for variable frequency control...the old variable-capacitor tuning method has gone by the wayside.

Rolling-your-own from scratch takes patience, research, study, and a scientific calculator to crunch the numbers. Design data/formulas are all available...but it isn't all available at a single place. Once done, though, one can truly brag about it without exaggeration...it is a unique thing that no one else has done!

Building one's own from a construction article is an
exercise in faith. :-) Faith that the author was correct,
faith that the publication didn't make a typo somewhere.
While typos are generally caught by someone, these
"short circuit" corrections seldom appear sooner than
three months after an article went to press.

>> That may change, however.

Jim: The "boring" part is due to spread-spectrum not being intuitive...and few have explained either direct-sequence or frequency-hopping in simpler terms or in terms that long-timers can accept. Long-timers referring to being used to conventional narrowband frequency tuning as practiced in amateur radio today.

One amateur band somewhere in the spectrum would be ideal for DSSS or FHSS trials. I would think it woud be preferrable in an urban area having many potential users, such as VHF or UHF with a repeater. There is one problem at present, a very big one, and that is standardization of the SS characteristics. At present the characteristics are individual to a manufacturer and hardly any are alike enough to be interoperable. In order to use it for a trial, every participant MUST be using the SAME characteristic.

Spread-spectrum in either of the two main modes is not that new to the radio industry. The standard small-unit

ground-air-vehicle manpack size radio for the US
military is now entering its 14th year of operational use.
SINCGARs family is FHSS, primarily for extreme
difficulty of unfriendlies getting a sufficient "fix" on the
signal (hops at 10 mS rates, very hard for an intercept).
DSSS is now installed in numbers of hundreds of
thousands, primarily in WLANs and CDMA cell phones.
DSSS with WLANs is so locally secure and free from
interference that it operates just like hard-wired
connections.

> Can't you just imagine? Instead of tuning the band for the 'weak ones'
>we can tune among the spreading sequences to see who's on the air today.
>Whoopie!

Dick: I'm glad you exhibit some joy at new things. For
a while most readers thought you wanted to fix US amateur
radio in the armor-plate-protected, concrete-block
traditionalism of the Olde Days, never ever to change (as
long as you were alive).

No, AJ. I need some credulity. Yours isn't credible.

Maybe I do need to upgrade...to some who have actually
worked such a problem rather than using someone
else's program. What do you say, Anon Jones?

Many VEs will accept a photocopy or a scan of a callbook page showing the class of license. Anything prior to Mar 87 qualifies as a Tech Plus with code and full general written.

Unfortunately, my 1983 book shows her as a Novice (under her maiden name?), and my 1988 book is too late for proof. Perhaps someone else has a book in between that can document her status as Tech.

And if that person is interested in selling that book, I would be interested in buying it! :-)

Sure it does, Dick. *Every* short form or Q-signal used for CW
can be used with PACTOR or any other digital mode. The only
difference with Morse code is that the modem function is
performed by human wetware.

I occasionally wonder why you can only deal in extremes. You connect those that like CW, or at least me with the Nazi's? "One mode, one service, one Reich..." That nonsense may work with your liberal friends that are oh so afraid of being politically correct. It is however wasted on me, as are the redneck comments, and the one nail left.

It is you Len that feels you have the total insight on how the world should work, perhaps I will feel the same way in the next few years as senility engulfs me as well.

Again I enjoyed your post if not your point of view.

I missed the XYL's name and call if it was given in an earlier post,
but there is a Melinda KA9MHO listed at the same address and likely is
who you are referring to. If so she was first licensed on Dec 25, 1981
and is listed as a Technician in my 1984 callbook...

You gave me an idea Cecil, I have taken a voice recognition program that I had done a long time ago. It is the type of program where each word is displayed and then the human inputs their voice response. Once the word is recognized you can speak faster or slower and it still recognizes the word and prints it to the screen. In any event instead of a voice response, I keyed an oscillator and sent the word in Morse. Once I had set up a few words I then sent faster and slower, used various spacing, and changed the notes pitch. Amazingly it works better than a Morse decoder program I downloaded for a comparison. Using Morse as a language rather than a digital mode seems to work well.

Thank you sending me off in a neat direction!

If you had ever been fluent in Morse you could have passed the 20wpm test.

Because I don't actually know whats there.  You see, I am deaf, and I
must stick to keyboard modes.  Just follow the link from the JLE bio on
QRZ.com and read all about it.

It's getting light outside. I have no proof but I assume that
that light is coming from the sun. If it quacks like a Duck ...

> And a built in electronic keyer is not a "key".

A built in electronic keyer is Morse code equipment used by
code-tested hams.

> I have always criticized jammers and other violators, no matter
> what tests they passed.

Proof, please. I just backtracked all your threaded postings.
I couldn't find where you even once condemned code-tested jammers.

You guys seem to be having problems stirring up emotions in the ng's
lately! I expect soon you'll be responding to your own posts.

Oh yeah, don't believe everything RUSH and Ollie tell you, they seem to
have trouble speaking if it's not reciting the republican line (not like
the left is any better). The republican party has more mantras than Jesse
and Jonny Cochran combined!

Anyway, now we see the true colors of the parties. Eight years ago the
Democrats (what a joke) were crying the Republicans were sabotaging the
presidency before it even started. The Republicans spent 8 years and
MILLIONS of our tax dollars trying to nail Willy saying all along it was
to protect the morals of our country (didn't work). Now the tide has
turned and it's starting all over again, only the names have changed.

Have fun!
Jay

I could have easily passed the 20wpm test in 1952. But there was no
need. I had *ALL* amateur operating privileges at the time. Unlike
you, the purpose of my amateur radio license is for the privileges
granted, not for the purpose of beating my chest like a gorilla
who learns to count to five.

Fred, Fred, Fred, you could do the same thing with bird calls. There is much more to human language than your above experiment. Human language involves the conceptual contextual *understanding* of meanings of language constructs which is completely missing from your above experiment. As yet, computers are incapable of *implementing* human language, just as are dogs.

Ain't that the godawful truth! The GOPpers have a naming department that rivals the Pentagon. The estate tax becomes the Death Tax. The completely ridiculous approach that considers a couple something other than two equal singles (and does not apply in Community Property states) becomes the Marriage Penalty. We end farm subsidies (and re-instate them every year since) and call it the Freedom to Farm bill. You can't introduce legislation without giving it a catchy and probably erroneous title. Anyone else selling committe chairs to the highest fund raisers might be called corrupt in other circles.

Fun and games in the old ballyard.

> it wants from the government than a small group.

Read it a little closer, Rich. Jim is advocating Morse code testing for any ham who wishes to use CW on the CW segments of ham radio bands. The rest of it is already moot - unless you actually do advocate doing away with CW completely.

>
> The dirty little secret is that pro-code amateurs fight for a code test
> to ensure amateurs are mostly pro-coders.
>

No, that's the dirty little lie promulgated by no-coders. What coded hams who understand the role of CW in ham radio want is for enough hams to be able to use the mode that it is available as needed, and isn't lost to us completely, as many code haters advocate. If you aren't one you could easily be misidentified by your writings.

You need to underestand (evidently you do not) that ham radio is quite different from any other radio service. Our mission is almost infinitely multifaceted, as compared to the narrowly focused objectives of commercial and governmental entities. Just because they have abandoned radiotelegraphy in favor of more cost efficient means, and do not hold any radiotelegraphy assets in reserve doesn't mean that such a plan is appropriate for the amateur radio service, where a large portion of participants use it extensively, and some use no other mode, nor wish to. To ignore their interests just because other later modes are in existance is about as logical as ignoring your left hand just because you are right handed and really don't need that unused left. Hey, just cut it off, the right hand is all I need.

> Some commercial users have valid claims to places in the radio spectrum.

So try claiming your personal portion of Yellowstone or Yosemite and see where it gets you.

> People-owned properties should be as accessible as possible to the
> people who own them so that there is the most benefit to the most
> owners. Code testing works against this.

So does all regulation and licensure. So it shall always be, and as people numbers increase so will regulation and restriction of use of limited available assets. Check news reports of newly enacted restrictions on use of National Parks, such as, again, Yosemite and Yellowstone. The several times I've visited Yosemite anyone could drive a private vehicle throughout the entire park. Nowdays you park your car just inside the gate and take a shuttle.

Lamar your point is well taken, but out of date. Mandatory code testing is as good as gone, and most likely will be gone once the international treaty is changed, probably no sooner than 2003 at the earliest.

What is being debated now is mandatory code testing for users of the mode. If you don't plan to ever use it, and don't change your mind, then you've nothing to fear from it. If you want to work radiotelegraphy, you would be required to learn it and pass a test before being allowed to do so. To attempt to work code without any training and practical experience is akin to attempting to fly an airplane without any prior flight training. It will not work, it can't be done. To attempt to transmit Morse code on ham radio while totally untrained is a violation of FCC rules requiring the exercise of good amateur practice.

Dick

>that he feels that finding parts is not cost effective.

Since Brian used the word "nobody" he appeared to be talking about
more hams than just himself. And because Brian has since replied: "I
don't think that's 100% true, but close", he didn't find as much fault
with my translation as you seem to. But I'll bet you're just yanking
my chain again, aren't you Ed...   :-)

This is all stuff and nonsense!

I remember when you had a check-box on the 610
in case you were a convicted FELON but during
the Carter administration they struck that down
because the leftists in the government feel the
need to protect the Constitutional rights of
FELONS over the rest of us.

Courts here decided that Convicted FELONS can't
be compelled to register their guns as it would
be a violation of their Fifth Amendment rights!

I think KB1EVA was a plant to make us all look
bad! The FCC under Clinton gave him the callsign!

KB1 Extra Violent Activities!

Jim, ac6tk
PS On my third callsign and they still can't
get it right!   (Texas Kilowatt in California?)

If so, I'm glad His Holiness was there on the job during the Clintoon
Administration!  When President Elect Bush takes office later this
month, His Holiness can take a break from his responsibilities as
the de factor ruler of the U.S.  I wish to thank him for his service to
our country.

An example of a citizen militia rising up against tyranny would be a coordinated, mass demonstration by armed citizens on the steps of the Capital, demanding redress of specific grievances. Naturally, the D.C. Police and the military would be called out, but it would be up to them to fire the first shots on citizens who were simply taking advantage of one of their Constitutional rights. When the "lawful authorities" did fire on such citizens, then they would then be responsible for the beginning of Civil War II. At that point, the police and military, composed of the sons, fathers, daughters, and mothers of the revolutionaries, would then be required to fight against potentially tens of millions of armed citizens who wish to live in freedom from government oppression and tyranny. Those would be interesting times, indeed!

> Ain't that the godawful truth!

Actually no. But what can you expect from a
belief system that routinely lies and disregards
legal contracts between the people and
the government in order to exert their
totalitarian authority.

The commission is an illegal proceeding,
only justified by it's propaganda value.

Considering the routine use of lies, hate,
fear, intimidation and propaganda, I think
forcefeeding NAZI propaganda into the
proceedings sums up the gist of this
exercise in retaliation.

I find that the Democrats often telegraph
their thoughts and intentions by first
accusing others of what they are planning.

In the town where I grew up (and defected
from) they have taken up "Touch Screen"
ballots that don't even offer any physical
evidence that you even voted. Recounts
would be impossible, because the only
way the vote could change is if there
was a loss of data.

Where the HELL are we going.

Jim, ac6tk

Cecil, Cecil, Cecil... You missed the whole point, I don't care one whit about the silly definition. I was relaying to you a technical report based on the serendipitous discovery spawned from the argument of language or code.

The point being that the voice recognition software works better than a standard CW decoder. The fuzzy algorithm needed for speech will satisfy copying poorly sent code better than a digital approach.

Thanks to your sending me in this direction, technicians the world over are now freed from the oppression of those nasty CW types that intentionally malformed characters to frustrate the code challenged. The world is once again safe and we can all sleep well!

Total nonsense Cecil! Pactor requires the use of a computer or at least a dumb terminal and a decoding device. What ever display is used has a code page appropriate to the country or the language.

Let's go back to your mythical Jap, his terminal displays Kata Kana, now how in the heck are you going to communicate with him if neither reads the others character set.

CW Now and forever for international communications.

"Cecil" <Cecil.A.Moore@IEEE.org> wrote in >

Fred, you're a true humanitarian. Perhaps you'll win the Hiram Peace
Prize for freeing unworthy Tech slime from the jack boot of opression.

Dick will be pissed, as usual.

Then there was the SoCal survey of the Marine Corps asking if they would
fire on American citizens if ordered to do so.

Suit yourself. I was just trying to give you a few extra years of
bitterness.

We're back to the 2024 sked when I retire, but you better not die on
me.

Some of the left wing nonsense, this from Ramsey Clark former Attorney General (D)
complete with neutral wording such as "Governor death"... January 20th should be fun. A search of the internet shows all the cock roaches are coming out of the woodwork.

THIRTEEN REASONS TO PROTEST AT BUSH'S INAUGURATION ON JAN. 20

On Jan. 20, thousands of people will march and rally to protest at George W. Bush's inauguration in Washington and San Francisco. We will be demonstrating against the incoming Bush administration and its racist, sexist, anti-gay, militaristic, anti- labor and pro-big business policies. Bush claims to be a "compassionate conservative," but his real "compassion" is reserved for the giant pharmaceutical, oil, banking and other corporations.

We call for a profound social transformation, to a society where people's needs come before profits, where every person has the right to a good-paying job, decent housing, health care, education, childcare and a clean environment. We call for freedom for death-row activist, author and prisoner Mumia Abu-Jamal, Native leader Leonard Peltier and all political prisoners. We cannot rely on the Democratic Party--Clinton led the charge in demolishing social welfare programs, bombing Yugoslavia and keeping the deadly sanctions against Iraq--or on the corrupt corporate elections.

Only a mass people's movement can bring real change, as has always been true. Jan. 20 can be an important step in building this movement, one which links together workers, students, people of all nationalities, women, lesbian, gay, bi and trans people, immigrants, the disabled, seniors and youths.

There are many reasons to join the Jan. 20 counter-inaugural protests. Here are a few:

(1) Bush will become president only due to massive racist disenfranchisement and voting fraud. Not only in Florida, but also across the country, African American votes were disproportionately thrown out. Hundreds of thousands of potential voters, especially in Black, Latino, Native American and poor white communities, have been permanently disenfranchised (forbidden to vote) for having been convicted of a felony. In predominantly African American neighborhoods from Atlanta to Chicago to Miami, outmoded technology and intimidation led to votes being disqualified 20-25 times as often as in adjoining white suburbs. Afraid to be accused of rocking the boat, the pro-system Democratic Party leadership refused to raise the issue of racism during the re-count process.

(2) Gov. Death is moving to Washington. As governor of Texas, Bush presided over more executions--152--than took place in the other 49 states combined during that time. The death penalty is racist and anti-poor. It must be abolished. Bush and his chief law enforcement official, Attorney General- designate John Ashcroft, are rabidly pro-execution.

(3) We must mobilize now to defend women's right to choose. The new Bush administration is anti-women and anti- choice. Women's right to abortion and birth control was won in the streets and it must be defended in the streets. Bush and Ashcroft are both on record as favoring a constitutional amendment banning women's right to choose. Ashcroft is opposed to abortion even in cases of rape, incest or where a woman's life is in danger.

(4) We need funding for universal health care, free education, afford able housing, heat and light, childcare and union jobs, not for the Pentagon. In the richest economy that has ever existed, the basic needs of the entire population could easily be met. Instead of going to meet human needs, how ever, hundreds of billions of dollars annually are spent on destructive and wasteful militarism. The U.S. already has a bigger military budget than the rest of the United Nations Security Council combined. Now Bush wants to vastly increase military spending, including building the so-called "National Missile Defense System." The NMDS is really an offensive rather than defensive system, and is an essential element in a first-strike nuclear war strategy. The Pentagon, which has spent a mind-boggling $4 trillion on nuclear weapons to date, has always refused to renounce the first-strike use of nuclear weapons. Both Bush and his new Secretary of Defense (War) Donald Rumsfeld are ardent supporters of NMDS.

(5) The genocidal sanctions on Iraq must end. In his first speech as Secretary of State-design ate, Colin Powell talked of "re-energizing the sanctions on Iraq." The sanctions-blockade has already taken more than 1.5 million Iraqi lives, half of them children under the age of 5. Powell, Vice President-elect Dick Cheney, James Baker and other George W. advisors launched the Gulf War 10 years ago during the regime of George Bush I. Clinton carried on the sanctions and bombing throughout his eight-year term, and now the new Bush team wants to further step up the war against Iraq.

(6) Stop U.S. intervention in Colombia and all of Latin America. The incoming Bush national security team wants to escalate U.S. intervention in Colombia beyond even Clinton's Plan Colombia. And it's not just Colombia--there is also the threat of wider intervention in Venezuela, Ecuador, Bolivia, Peru, Mexico and Argentina, where people are rising up against the domination of the International Monetary Fund, World Bank and U.S. corporate domination. We must act now to stop a new Vietnam War in Latin America.

(7) The incoming Bush administration is filled with vicious bigots who want to turn back the clock on gains won by lesbian, gay, bi and trans people. Bush is allied with the bigoted religious and non-religious extreme right who want to deny equal rights to lesbian, gay, bi and trans people and force them back into the closet.

(8) The 40-year war against Cuba must end. Bush, like the nine presidents before him, wants to turn Cuba back into a colony of the U.S. as it was before the 1959 revolution. It is time to end the blockade and aggression against a small neighboring country and let Cuba live in peace.

(9) The Bush administration wants to speed up environmental destruction for the sake of corporate profits. Under Gov. Bush, Texas ranked 50th among states in air quality and first in toxic polluters, toxic releases, carcinogens in the air and 13 other polluting categories. Bush put polluting industry representatives in charge of the state's Natural Resources Conservation Council (Texas' version of the EPA). Bush and his nominee for Interior Secretary Gale Norton want to open the Arctic National Wildlife Preserve to oil drilling, just a hint of what is to come unless we mobilize now.

(10) Support an independent home land for the Palestinian people. The U.S. has given Israel hundreds of billions of dollars in aid over the past 50 years, aid used to repress the Palestinians. The U.S. government and Israel are acting as a team against the Palestinians. There will be no peace in the Middle East until there is justice for the Palestinian people.

(11) End U.S. colonialism in Puerto Rico--U.S. Navy out of Vieques! The Bush administration's plan for military expansion includes keeping the island of Vieques as a bombing range. Many Puerto Rican people have been killed or injured, and the environment and economy of Vieques have suffered much destruction. Now is the time to support the Puerto Rican people in their struggle to get the Pentagon out.

(12) Shut down the prison-industrial complex! The U.S. has 5 percent if the world's population and 25 percent of the world's prison population. This amounts to over 2 million people, a majority of them African American, Native and Latino. Prisons are all about brutal repression and super-exploitation against the poor and people of color, not rehabilitation. The economic basis for all of this repression is profits. Wall Street firms and banks invested an estimated $41 billion into the expansion of private prisons last year. Prisoners are forced to work for slave wages for high tech, manufacturing and service companies. Under the Clinton/ Gore administration, more prisons were built than universities. The Bush administration plans to continue this trend. A national movement must be built to shut down these concentration camps. Our youths need union jobs and good schools, not incarceration.

(13) We will march on Jan. 20 to say NO to the anti-worker Bush regime. Bush's Secretary of Labor candidate is an extreme right-winger who is anti-civil rights, anti-women's rights, anti-lesbian and gay, anti-disabled persons, anti- immigrant and ANTI-LABOR! Linda Chavez is the dream Secretary of Labor--for the corporations and bosses. Appointed by Reagan to head the U.S. Civil Rights Commission in 1983, she worked to reverse all the gains of the civil rights movement. Chavez is opposed to there even being a federal minimum wage.

Looks like the "crying" liberals have turned into "tantrum throwing" liberals. With all their childish behavior it was the only logical next step. Maybe it is time for the parent to give them a slap across the mouth? (hehehe)

~Steve~

I believe that to be his point; the testing for Morse code should be on a par
for the testing for other modes.  The only mode that is not optional on HF is
Morse code.

Why would testing of the encoding method used in Morse code be necessary before
```

granting CW access in the CW portion of the band. Are you afraid hordes of people will learn Morse code wrong and try to get on the air? Those that learn the code will use the mode, just as badly as I did at first and will improve with time if they stick to it.

Would you advocate that the VEs determine that a ham has working RTTY equipment before he or she is permitted to use RTTY on the digital portions of the bands?

I am not a code hater, Dick, so let me add my two-cents worth. IMHO, everything that is good about Morse code on April 14, 2000 was equally good on April 16, 2000. The value will continue to be there if the code tests are removed entirely. I agree that fewer hams will try it, but I also don't believe that its use will end any time soon, if ever, in the Amateur bands.

I believe that the harshness and anger I have seen expressed here by some of the pro-code-test folks is turning people away from the mode. Why do you believe that some of those who say that they want to retain Morse code testing to help preserve the mode are engaging in conduct that is helping to drive people away from it?

>From: Dick Carroll dixie@townsqr.com

>You need to underestand (evidently you do not) that ham radio is quite
>different from any other radio service.

It was not significantly different from other radio services when it was created, Dick.

Do you believe that if ham radio had been created deliberately to function entirely differently than the radio services of its day, that it would have attained the level of respect and value that helped preserve it through decades?

>Our mission is almost infinitely multifaceted, as compared to
>the narrowly focused objectives of commercial and governmental entities.

I agree; our diversity is our strength. Having a test that emphasizes one mode over all others is not "infinitely multifaceted" and cannot be expected to foster that diversity in the Amateur Radio Service.

>Just because they have abandoned
>radiotelegraphy in favor of more cost efficient means, and do not hold
>any radiotelegraphy assets in reserve doesn't mean that such a plan is
>appropriate for the amateur radio service, where a large portion of
>participants use it extensively,

Do you think the same thing was said about the use of spark in the Amateur Radio Service? Do you think the Amateur Radio Service would have survived had it not evolved past that?

> and some use no other mode, nor wish
to.

> To ignore their interests just because other later modes are in
>existance is about as logical as ignoring your left hand just because
>you are right handed and really don't need that unused left. Hey, just
>cut it off, the right hand is all I need.

Some use no other mode that RTTY. Do you believe they should be allowed to require that hams demonstrate that they possess the ability to decode RTTY before they are given a license to use CW?

>> Some commercial users have valid claims to places in the radio spectrum.
>> They have paid the people to use those places. The places occupied by

That just means that the code requirement should have been dropped,
not just reduced. What happened to all those hoards of CBers and

freebanders that you predicted would invade the ARS?

Everyone can visualize that, Dick. It still doesn't make Morse code
a language. Those words you are copying in Morse code are *English*
words.

> Your posting was not ignored, it was read carefully by me. But you're

Actually, it is not a language - for you it is obviously a religion.

I found out about it in Cub Scouts. My cousin and I learned it
together but not for a merit badge. We used it for secret messages
in the middle of the night. We were about ten years old.

>Does that imply that they aren't concerned about seletive
>or locally limited interference to ham radio?

>Just what does
>"widespread" mean in their efforts to limit interference to
>my operations and those of other hams?

Let me preface my answer with a bit of background. First, these devices are quite legal under Part 15 rules. They will need to meet the limits for intentional radiators on HF. It would be perfectly legal for a manufactuer to make an intentional emitter that creates a field of 50 uV/m at 30 meters distance from the radiating source. On 3.5 MHz, this translates to a an S9+10 dB level signal. There is a further provision in Part 15 that requires that such a device not cause harmful interference.

The levels that they are notching are 30 to 50 dB less than what is permitted under Part 15 rules. They don't have to do this, except that they are trying to avoid the interference reports that will inevitably result if they don't. The industry has learned from the lessons of the wireless modem jacks that are being removed from service by AT&T.

The levels for the notches being considered would result in approximately 0.01 microwatts being radiated from an inefficient radiator (the power wiring inside a home) in the typical bandwidth being used by hams. Compare that to the permitted spurious emissions level permitted to hams of 50 milliwatts from an HF transmitter. We are allowed about 67 dB more radiation from our harmonics in our neighbor's TV channel than they are proposing to use in the ham bands.

The general goal at this stage is to ensure that one of these devices installed in a neighboring home will not cause harmful interference. I don't know where the FCC would draw the line on what constitutes "harmful interference," btw. I don't know if the product can be made that good, but ARRL is going to work as closely with an industry that wants to do the right thing as can be done. From there, it may become a regulatory matter.

Sooner or later, with this type of product, the line will be crossed where harmful interference will happen. I suspect that apartments and indoor ham antennas may be a problem. Of course, that already is a problem with many other types of devices. Interestingly, at KB1BE, one of the fluourescent lights in his basement radiated about 10 dB more noise than did the test signals we were coupling into his residential wiring. Part of his antenna was located 15 feet from the house, FWIW.

I don't know how all this is going to turn out, Bill. I do know that there is a limit to what ARRL can ask them to do voluntarily, and that the regulations would permit them to do NOTHING voluntarily.

>What about local interference by one of these devices to
>my operation if a neighbor installs one?

I also raised the question of susceptibility. Although not a rules problem, susceptibility issues DO cause grief for hams with neighbors who don't understand the rules. At this stage, I have a general agreement that they will get some beta units to me for testing purposes.

More to follow, in a more public venue, as soon as more is known.

As an aside, a similar product, home phone networking, has notches in the ham bands. When I met with a rep from the Home Phone Networking Alliance, we tested both immunity and radiation. At W1AW, the one we tested was virtually immune, although with closer antennas, there could have been problems. This rep, btw, is Steve Strauss, NY3B, who is now a member of the ARRL RFI Task Group. Ron McConnell, W2IOL, a rep from one of the VDSL committees, is another.

It is absolutely wonderful to see that, if approached and made aware of ham radio, the industries are willing to take steps to address harmful interference, at least in these cases.

We can all be glad that Larry is permitting this work to continue instead of selling the building and taking out a few prime-time TV ads. :-)

73,
Ed Hare, W1RFI

Nope, Japanese terminals either display English characters or allow the kind of characters to be selectable. You see, the Japanese, long ago recognized the superiority of a 26 character alphabet and adopted Romanji for their computer systems. Thus I can send, using PACTOR, "RST is 579" and my Japanese friends can understand it perfectly with no Morse code involved. Thus, if Morse code is a language, then PACTOR is also a language.

I was applications manager for OKI Semiconductor for a number of years. The parent company was Oki Denki and many of their employees were hams. All of their personal computers used Roman (English) characters. Almost all of those hams operated their personal computers in English, just like I did.

>If it quacks like a duck ... Ed, do you agree with Jim that dits
>or dahs sent for the purpose of jamming are not sent with Morse
>code equipment?

I believe that most of the strings of dits used for jamming are probably sent
with the internal keyers that have been part of most HF rigs for over a decade
now. A plug and a wire is all that is needed.

I have no doubt that some of those keyers are also used for Morse code. I also
have no doubt that some of them are not.

I have no basis on which to even speculate as to the percentage. Do you?

I wonder what she had to do to get it?

I heard she smoked a Cuban cigar to get the Fidel interview.

If they were mispronounced so badly as to be unrecognizable as English, are
they still English?

I think I know how to resolve this. My wife speaks English but is not a ham.
If she understands the words, I am sure everyone will agree wholeheartedly that
they are English.

Why would you feel that is has to be one or the other. SS would need to be
kept isolated from the weak-signal parts of the band (especially DSSS), but,
IMHO, the diversity of the Amateur Radio Service should continue.

He may be right. Those that can do CW proficiently better than others are indeed better -- at CW. I am probably better than the both of you at doing RF-exposure evaluations for ham stations. (Typical time, with book in hand -- about a minute.) All that proves is that I have developed that skill.

>Radio Relic League".

I don't know what the Board has in mind, but it will be considering this very issue at the January Board meeting. If it didn't think that a change in policy was possible, it would not have to consider the matter at all. It has an existing policy right now.

> I am a current member of the ARRL by the way, and I am
>using my membership to send my view to the ARRL leadership that the Morse
>code test requirements should be dropped at the next WARC. It's high time
>ham radio moved in to the future. I am working from the inside to change
>things, and I would urge others, who are not currently ARRL members to join,
>and make your view known, one way or the other.

Although I agree with the reasons to join the League, I will also add that you do NOT have to be a member to voice your opinion. In the first place, the Board members generally don't take the time to check each and every input to see if the correspondent is a member. Especially in this matter, the Board is quite aware that a number of hams are not members because of what they see ARRL's position on CW testing to be.

I am going to make my views known to Tom Frenaye, and I urge others to do the same with their Director, even if they live in the New England Division and want to cancel out my vote.

See http://www.arrl.org/divisions and follow the email links.

>Gee Ed!, I thought I had seen you at Woodstock...

Actually, I am an old hippie, though I never did make it to Woodstock. There was a lot of good and bad in those days, and I tried to hold on to the good.

I am glad that I learned that the problems of the world are not solved by singing songs in the park. We did that on days we weren't solving the world's problems, too.

Actually, the lessons I was opining about were the ones I learned in Sunday school. Maybe I was niave, but I still believe in some of those things. :-)

My guess is that they were probably infirm and just loved CW too much to give it up. That is why I did my best to give them QSOs, though I must confess that I did cut the QSOs short.

My statement that the sending was bad enough to be considered in violation of good amateur practice does not mean that I feel the operator should be prosecuted.

'Sides, I am not an OO. :-)

>because it was fun.

Cecil:

No, I'm saying that I respond to incentives do do things, like everyone else. Ham radio is not a necessity of life, like working at my job in order to make a living. I do a lot of things on the job with the only incentive being that I need to keep my job and progress within it. As a radio amateur, I required an incentive to seek higher privileges, because I could have chosen to whine on 2-meters for the rest of my life while waiting for code testing to be abolished. That didn't work for me, because I wanted HF privileges then and there -- without waiting for them. Thus, my incentive to learn and gain practical proficiency in Morse/CW -- a mode which I have enjoyed greatly ever since I was "forced" to learn it!

>Are you implying that CW is not gratifying?

Cecil:

Of course it is, but that gratification is delayed by the necessity to learn the Morse code and gain satisfactory proficiency in that skill. Plugging a microphone into an HF rig, pushing the button and talking is "instant" gratification, therefore, the strong push to eliminate remaining code testing requirements. Of course, this is obvious to everyone but you.

Hope so. Wonder if he was listening earlier also?

At around 9:15 AM Central on 14.313 on 14 Jan 2001
two stations from a maritime "net" on 14.300 helped a maritime ham station phone
patch to an individual who openly announced on the patch
that he was not a licenced operator but would meet up with the maritime
ham regardless, on the frequency of 12.350 mHz USB.
Listened on 12.350 after their 14.313 ham "phone patch" was concluded.
They used the callsigns "sasperella" and "shooting star".
Whole activity was questionable from beginning to end.
Nice to see that 20m ham nets facilitate comms on non-ham freqs
by potentially unauthorized individuals. Makes the Service look real nice.

Did you hear this too R.H. ?

That would be a valid reason IF there was a government
need for amateurs to attain that skill. You can argue that
as you choose, but I fully believe that you'd never convince
the administrations of the world that the skill is needed
today.

Cheers,
Bill K2UNK

Yep, they sure are. Now would you care to place a wager if there were me and

a nocoder, which could get on the air using the mode they were not
proficient in the quickest.

Yes, the activities of the nets needs to be investigated.

You are the one who made the phantom linkage. Working CW is NOT
akin to flying an airplane.

If I understand what you've written, the person on the telephone
said he was not a ham. That's perfectly acceptable.

>Listened on 12.350 after their 14.313 ham "phone patch" was concluded.
>They used the callsigns "sasperella" and "shooting star".

Those would probably be the names of their boats. Boat names in
lieu of callsigns are permitted on the VHF marine channels --
perhaps the FCC now permits that also on the HF marine frequencies
now.

>Whole activity was questionable from beginning to end.
>Nice to see that 20m ham nets facilitate comms on non-ham freqs

Coordinating two boats to meet up on a marine band frequency
is perfectly acceptable.

If it's not fun, it's not practical, Larry. Everybody does not
share your likes and dislikes. What is wrong with live and let
live?

As a matter of fact, one by one, those administrations of the
world are indicating by their actions that they don't agree
with Larry. Didn't I read that Canada is in the process of
adopting a 5wpm maximum code requirement?

Well, the next time you have a QSO, take down everything character by
character and word for word and show it to your wife. If she understands
most of it, it was in the English language and you were just the modem.

Good for you Ed! I don't know what your stand on the issue really is, but that does not really matter either. What does matter is that both you and I did something other than bitch about it on this news group, by contacting our ARRL division directors. If we don't talk to them they don't know what we think, or want!

Yeah, but what is the internal noise level? They speaketh with forked tongues. The Icoms of the world know that most of the users will be doing non-critical FM yakking with the baby boxes. When one gets into moonbounce, very weak cw and ssb

tropo scatter work etc. the performance requirements get a lot stiffer in areas
like noise figure, dynamic range, filter quality, DSP capabilities, etc. where the
desktoppers have the advantage over the "radios of convenience".
>

I'm not sure I agree that prices are actually going up - depending on how you
define "prices". My sense is that given a constant $2k the bang for the buck has
been rising at a very significant rate. Over the long haul in time a ham today
gets a helluva lot more capabilities and performance per on-the-job labor hours
than he could years ago, no comparison. A Collins S-Line sucked up say two months
worth of paychecks in 1970. Today two-three weeks worth of paychecks gets an xcvr
with far better capabilities, a big increase in features and better performance
than an S-Line has. Very roughly speaking. Those so-called spectrum analyzers are
a flaming joke.

I agree that hams in the centimeter bands have a lot of pressure which can only
get
worse. But I can also visualize 222-225 being eyed by the aviation folk who are
already in that neighborhood and have a big spectrum crunch.
>

>Yeah, but what is the internal noise level?
That is exactly what a sensitivity measurement measures.

> When one gets into moonbounce, very weak cw and
>ssb tropo scatter work etc. the performance requirements get a
>lot stiffer in areas like noise figure,

Noise figure is another way of expressing sensitivity.

> dynamic range,

Dynamic range is a measure of the ability of a receiver to remain sensitive in the presence of strong signals not in the passband of the receiver. IMHO, the dynamic range of most receivers sold to hams is adequate, most of the time. EME enthusiasts usually do not schedule their events and QSOs the day of the ARRL VHF Sweepstakes, when there are apt to be strong signals up and down the band. If those strong signals are not present, dynamic range is not usually a receiver issue.

> filter quality,

Filter quality does sometimes buy you something. If you are listening to a weak one and there is a strong signal just outside the filter passband, it is nice to be able to get rid of it nearly completely. Most of the time, though, the filters in the intermediate-priced rigs are quite adequate for the task, and if those strong signals are not present just outside the passband, the improved skirt selectivity of some of the higher end rigs has no significant effect on what is heard in the receiver baseband.

> DSP capabilities, etc.

For the most part, DSP=filtering, wtih some dynamic range implications. Actually, in the areas you cite, the DSP implementation in the big rigs results in a poorer close-in dynamic range (<20 kHz spacing) than does the use of a moderate filter before the high-gain stages of the receiver. Some DSP radios do use such a filter, but in those cases, the DSP is a secondary benefit, with the filtering providing most of the selectivity.

>where the desktoppers have the dvantage over the "radios of convenience".

I agree, on the whole, the >$3000.00 radios have better performance capability than the radios in the $1500.00 price class. The ham who erects the big tower and high-gain antennas will need every dB of dynamic range that is available. The ham who has a modest antenna system, though, probably will not. For that ham, a low-end radio makes a lot of economic and technical sense.

Speaking of dynamic range, the best dynamic range ever measured in the ARRL Lab at 5 kHz spacing belongs to the Elecraft K2 on 20 meters.

That is exactly what is needed to influence ARRL policy. Hams should also make their views known to the FCC when such matters are on the regulatory plate. They should also support organizations that represent their views, such as FISTS or NCI.

Many of those seeking to end Morse-code testing requirements already have that "instant" gratification available to them.

>Of course, this is obvious to everyone but you.

What is obvious about Bill Sohl's desire to end Morse code testing? He can already yak on any amateur frequency.

Here are the terms. Let's select someone with a no-code license and you. He or she will be asked to construct a Morse-code transmitter and make a Morse code QSO. You will be asked to construct a spread-spectrum transmitter and make a Morse code QSO. Winner gets an ARRL Handbook from the "bent-cover" bin.

I will answer the first question later in the week when I can type out a long answer.

I cannot answer the second because I do not believe that we should have a one-class license system. I also do not believe that our licensing system should contain no Morse code testing. I believe that Morse code proficiency should be tested the same way we test for proficiency in other modes.

Hey Ed, I'm asking the questions around here.  ;)

OK, what percentage of the pre-99 Extras participated?

Or better yet, of the participants, what percentage did the pre-99
Extras make?

Try english sometime, but back to your wager.

That counts me out since I not a no-coder, but I suspect that you would hurt yourself just to try to prove a point. I'll put a dollar on the crazy Extra who's so full of himself and has so much to prove.

>Ed, I knew you'd eventually agree with the Amateur's Code, good amateur practice, and Part 97.

I have always agreed with the need for good amateur practice, Brian. I just don't agree with you that deviations from standard spacing that can still be easily copied by most operators is not good amateur practice.

>I'm always amazed at how people will abandon reason just to argue with me.

If you think that the only reason I hold my view is so I can argue with you, you are quite mistaken.

>If they so vehemently object to what Part 97 says, they ought to try to change it.

As can you. I don't recall that you have filed any RFMs about the need to closely control the spacing of sent CW. To my knowledge, no one has ever received an NAL for poor CW timing, so obviously the FCC and most of the amateur community believe that existing practice is adequate and is within the letter of the law.

You ought to try to change it.

Most of those Novices either upgraded or failed to renew.

Do you believe they would have renewed if they had been limited only to Morse
code operation?

>any UHF band with almost any other service by allocating a specific set of
>spreading codes to hams.

The bottom line, Cecil, is that such sharing is going to take place whether hams use SS on those bands or not. The proliferation of unlicensed devices, some of which are permitted 1 W with unlimited antenna gain, on some of "our" microwave bands is already starting to have an effect.

It remains to be seen whether the FCC will back ham radio in cases of actual harmful interference. Even if they are willing to do so, the problem of locating individual offenders is a daunting challenge, and the problems of aggregate noise levels from multiple devices may represent something the FCC won't address. I am doing what I can to deal with this one, but I am not making any promises.

Brian/Ed:

What is the significance of 1999? Restructuring and the "nickle
Extra" took place in April, 2000. If that's what you're talking about,
you'd have to say "The pre-4/15/2000 Extras," to indicate Extra-
class operators who had taken and passed the 20 WPM code
test element.

And your problem with this is what? The non-ham sailor picked
a maritime HF frequency; presumably his vessel carries a marine
HF license, and the two stations carried out communications
on 12.350.

Thats pretty fantastic memorization, most of the time. If your
memory is so good remembering the ones you guessed at, why didn't you
remember the exact answer as given in the Q pool? How many times did
you have to take the exams?

> >So it is unrealistic to consider learning a part of the VE

Teachers Unions? No, putting it on the VEs was offered as an unworkable
solution.

OK, after each exam session, one of the flunkees takes control of the
test material. The flunkees then go through the material, exam by exam,
and raise questions about the ones marked in red. After all of the
incorrect answers have been reviewed, the flunkee reassembles all of the
exams, QA sheets, written exam and code exam answer keys, and copies of
the CSCE's in their proper order and eturns them to the lead VE.

I agree. This can be done without the VE's assistance. Why should they
need absolute control over the test material?

3950? That's way up there in the General voice sub-band, isn't it?
I'm not sure my radio would tune that frequency!

Good luck on this one now!

New Count Shows Bush May Have Won Popular Vote
NewsMax.com
Wednesday, December 20, 2000

Despite the widely accepted claim that Al Gore won the popular vote by some 300,000 votes, a new count of state totals appears to show George Bush was the real winner by nearly 2 million votes.

According to respected news analyst Mary Mostert, a report sent to her by reader Don Boyd showed that Gore got a total of 50,753,172 votes nationwide while Bush got 52,685,804 giving him a winning margin of 1,932,632.

Wrote Mostert "While I have not checked all 50 states with the Secretary of State official returns, I have checked all the big states and a number of the smaller states. All the ones I have checked are accurate, or modified very slightly with late absentee ballots, which tilted towards George W. Bush. For those who want to personally check these figures, go to the "Original Source" which has all the election information by state. Nearly all the states now have their OFFICIAL, returns posted.

These figures were reportedly obtained from the Office of the Secretary of State from each state but haven't been confirmed. Where are Al Gore's cheer leaders known as the news media??

 No they haven't been confirmed and in fact if they have, why hasn't
this total appeared on the ABC News web page ?

Hahahaha.. this is so typical of the right wing Limbrain cabal.

Well Folks,

With all the sound and fury signifying nothing I just had to look into
Fred's bona fides, very interesting reading.

It seems that just before the change in the code requirements Fred was
and Advanced Class amateur holding the call W4JLE now it seems he
hold an Amateur Extra license effective June 03, 2000 this is well
past the change in code requirements for Amateur Extra. One can
only presume from all this that Fred waited until the code
requirements were reduced before upgrading. The question is, why?

In my own cynical way I have to presume that Fred, despite all the
sound and fury, was unable to pass Element 1C and so had to wait
until the bar was lowered to get his Amateur Extra. This casts
doubt on all of his blathering about traffic handling, superiority,
the value of other, etc. I'm sure there is a wonderful excuse and
lots of aspersions to be cast at me for this revelation but the
public record speaks for itself.

In the hash light of these new revelations I am forced to conclude
Freddie had been fibbing to us and I'm afraid I won't be able
to consider anything he says from now on to be credible. Oh well,
he never had anything interesting to say anyway. Please be
careful Fred, word on the street is that you go to Hell for lying.

You missed his point, Larry. Did anyone require you to achieve
a Morse code speed in excess of 20wpm? If not, why did you go
above 20wpm?

Dick Carroll wrote:

> Lamar your point is well taken, but out of date. Mandatory code testing is as good as gone, and most likely will be gone once the international treaty is changed, probably no sooner than 2003 at the earliest.

I didn't get involved in this thread because of that, Dick. No, I bothered reading the thread because a pro-code proponent expressed that he wasn't surprised that a NoCode licensee killed someone. That's pretty inflammatory.

But, it is not yet a done deal. ARRL is soliciting comment on whether they should change their code stance or not -- while it may not change the WRC outcome, it certainly could change how the FCC deals with the WRC results.

> What is being debated now is mandatory code testing for users of the mode. If you don't plan to ever use it, and don't change your mind, then you've nothing to fear from it.

You know, that is an interesting proposition. But is it practical?

> To attempt to work code without any training and practical experience is akin to attempting to fly an airplane without any prior

> flight training. It will not work, it can't be done. To attempt to
> transmit Morse code on ham radio while totally untrained is a violation
> of FCC rules requiring the exercise of good amateur practice.

Why can't I work CW with my MFJ 1278 (it _does_ do CW)? Do I need the
training in manual CW to enjoy automatic CW? Should I then be required
to learn to copy Baudot or ASCIII by hand before using the same 1278 to
work RTTY, AMTOR, or PacTOR?

With the 1278 on my rig, you wouldn't be able to tell if I were working
manual or automatic.

And, there is really no difference in the use of the 1278 for automatic
CW and the use of 'contest keyers' to make endless CQ's easy.

It's not at all akin to flying an airplane -- it's more akin to using a
calculator without knowing how to do it by hand.

EME aside, the guys who are VHF contesters or dxers and the band is open need all
the dynamic range they can get just like the lowbanders do. All ya need is two
of
those critters on the same block on the air at the same time.
>

Absolutely. Much of the need for filter quality is a function of what one does
with
the radio. The casual ragchewers aren't as demanding as the dx contesters for
instance. Getting off the VHF thread a bit one does not want to go into the piles
on the bottom end of 80 in the big dx contests with mediochre filters or dynamic
range. Collins and Inrad filters are worth the money to those who can justify the
additional expense.

DSP technology simply is not yet ready for prime time in this respect. Needs to be
moved out to the antenna connector then we'll see it catch up with the Real
Filters
in the IFs.

Whizzy little box. My JRC NRD-545 didn't come in far behind the K2 in your
front-end tests. But I'll tellya what: The 545 is one of those filterless all-DSP
radios and as far as the skirts go the cascaded Inrad filters in my antique
TS-940SAT spank the pants off the DSP skirts of the 545. And the 200Hz xtal filter
in my 75S-3B artifact take it one more step.
>
Speaking of lab tests: When are you gonna put the FT-817 thru it's paces? If that
little puppy proves to be something more than a backpacker's toy it should have a
significant market.

Actually, there is quite a significant a difference.

For the other digital modes (ASCII, Baudot, Pactor, Amtor, etc) the sending
transmission will certainly be machine-generated. In the case of CW, that
is the exception. From my experience (and from reading other peoples
results too) the machine CW readers typically have major problems
decoding anything that is not machine-generated.

RUSH? OLLIE? Who are they? Not anyone I ever listen to. I couldn't tell you when either is on what media or where. I know what I believe. I imagine those guys are right a lot of the time, too, but I don't use my time to listen to any of it. And I turn the channel with the Big Creep comes on the tube, Big AL too. hope I don't have to develop the same outlook on Dubya. Don't think it'll ever happen. I know I won't on Cheney.

I got an email a couple days ago from a young relative in California wanting everyone to sign a petition to have The Big Creep sign the Alaskan wildlife something-or-other into a national monument so no one can ever drill for oil there. Young feller meantime is about to find himself sitting in the dark and cold because the stumblebums that pass for government officials there don't have sense enough to know that their electric utilities can't buy high and sell low without eventual bankruptcy. Whatta buncha clowns. I guess they've already got all the Ca coastal oil locked away. Guess they can always use candles. Won't do much good for all their Silucon Valley servers though. So much for High Tech.

Giventhe alternatives, I'd rather see that than to sell hard drives to
the Chinese which contain all our nuke information.

And wasn't it neat how Janet Reno settled Riady's case the week before
Slick checks out? Sure helps keep him quiet about all Slick's treasonous
Chinese fundraising.

Not me, I'm happy as hell for ya, kid. Now you don't have even
imaginary justification to call me a lid just because I won't make
myself send my Morse code to your inept "specifications".

Don't worry about 'em, Fred, they're relatively harmless. They just
make a lot of noise and consume bandwidth.
Real people keep their rifles in the closet. All those nuts have is a
bumper sticker that says "Gunfree and Proud of it".

That remark is inconsistant with reality and you know it. But then much of what goes on in the regulatory world today is.

Bet you a lobster that the same thing occurs when the do dropthe code
test entirely.

What happened to all those hoards of CBers and
> freebanders that you predicted would invade the ARS?

They arrived early. In the form of lots of no coders and slow coders.
No real surprise, lots of them have came through the VE system. And many
have gone on to other more productive "freeband" activities where they

find conditions and 'services' better than 27 mhz and they don't have to put up with dodging ham radio regulations and renewed enforcement. Things do evolve. Ham radio is evolving -mutating would be a better choice of words,like a cancer- into something unrecognizable. Ah well, no good thing lasts forever. Ham radio is no different in that respect.

Hi Lamar,

You are right about what started this, but of the 384+ postings, this thread spin-off from prior, repugnant topics almost ceased from the beginning to conform to that trash. There are hardly more than 4 or 5 that responded to that where the remaining 380 postings have simply focused on the obvious inflammatory subject of the CW requirement.

I suppose that the originator of this (not W. G. Ewald, but Fraudtenna) might clamor that those 380+ postings are off topic, but thankfully Fraudtenna has abandoned the dung heap they tried to build as a monument to their moral authority.

In a sense, the topic No-code kills has evolved into a statement that no-code replacing CW requirements is killing amateur radio. That certainly is inflammatory enough to stimulate the number of postings and participants.

```

To: The Commission

COMMENTS ON RM-10018

The commenter, Hans Brakob, an FCC Amateur Radio Licensee for several decades, assigned station call K0HB, agrees in principle with the petition of Joseph Speroni, AH0A, and proposes an expansion of the frequencies allowed.

1. Because of attrition (no new Novices being licensed), current Novice licensees (and Technician licensees who have passed the 5WPM Morse code test) face a continuously diminishing ability to engage in Morse contacts in their current CW band segments.

2. While these segments are also available for use by other license classes, most licensees with higher class licenses tend to avoid the Novice sub-bands so as not to infringe on this reserved practice territory. This well-meaning reluctance to infringe may be misplaced, but it is real, and has at least two undesirable consequences.

3. First, it creates an "ghetto" where Novices are isolated from mainstream Amateur Radio and do not gain exposure to the benefits of interacting with more experienced and skilled operators, and�

4. Second, because of attrition, these already-underutilized band segments will see less and less activity while other adjacent segments become more crowded because of increasing popularity of other emerging data modes like PSK31.

5. I further propose that this concept be applied to the "General" segments of all MF/HF amateur bands, not just the 4 bands proposed in the instant petition. If Novices were allowed to participate in the full range of CW operations (CW only at reduced power of 200W) on all bands, such as traffic handling, radiosporting ("contests"), and DX�ing, they would be much more likely to gain in skills and enthusiasm, and aspire to gain the theoretical knowledge to upgrade to the increased power and mode capabilities of General or Extra license classes.

Respectfully submitted,

H. Hans Brakob, K0HB

Nice quote from Macbeth, however I happen to have a certificate from a midnight session of the last day showing I upgraded under the old scheme. Never really cared about getting the Extra until they were about to remove the code requirement. To be honest, I have been laying back in the weeds waiting for someone to bring this up since the change in regs. Yes, the public record speaks for it's self, one simply has to understand what it is saying.

If you look, you will see that the date you quote is a second change since that time. Go to the FCC database and check the progression.

Why should I cast aspersions toward you, I leave those tactics to those that have no rational arguments. If you have any doubts about my qualifications, you need only ask and I will be glad to point you in the right direction. This will save you from making invalid conclusions.

I'll make it easy for you to find, Paul: Among my letters to ARRL include
my newsletters sent to the division membership during all my runs for director
(that's an ARRL rule). Easy to locate, all in public forum. One of them
especially went into detailed discussion about what to do to protect/improve
the Service re: deregulation. They will also have my 300-word statements (as
part of the ARRL mailouts) on file. They will also have on file two letters

concerning my proposal to initiate the (first) Spectrum Protection Act (which they allowed me credit for on at least one of my 300-word statements).

Other information you ask for is of a technical-article nature: October 1972, March 1974, and January 1977 QST (that one a Cover Plaque).

If ARRL has none of these, a summary of all those suggestions to improve the exam process per se was filed with FCC in their restructuring proposal. On the FCC site, in public forum. In only 4 pages, as I remember.

Just to keep you knowledgeable, my runs for director were based on what was possible for the voter, not impossible. Far from your 'dictatorial' label, my platform specifically pushed binding referenda in the Hudson Division: a no-nonsense binding vote by membership to be held on the most important (major) issues that the director would be bound to in his vote on the Board. One or more of my opponents spent time racing about the division with the message that it couldn't be done, and/or it wouldn't be good. The 'binding referenda' idea made them nervous. In that context, there's also a letter on file to an ARRL reform committee re: nasty politics that came about at my expense during my run to push binding referenda.

During the course of my "runs" (two of them three-man races, two of them two-man races) my message evoked three major responses:

1. You won't really bring binding referenda, will you!
2. Your message about binding referenda is scaring a lot of people.
3. You come on as too honest, thus we're confused.

Comment (1) told me that someone was trying very hard to convince them I wouldn't do what I promised, or that the voters were looking for a way out when faced with a solution to their supposed 'we're never heard' problem.

Comment (2) confirmed that people complain about not having say, but if given say, they'd run. Comment (3) pleased me greatly, because it told me that, by definition, I wasn't a politician. Comment (3) said clearly that voters indeed _expect_ bull in a politician: that is, they expect a lot of nonsense.

One 80+ year old ham told me back then "Vince, people don't want solutions, they say they want control but they just want to hear themselves complain. They want to be kicked in the *** so hard that they cry. Believe me, son, that's what they really want."

I believe him, now. The business about voters wanting to discuss the "issues" is hoary nonsense. They generally don't. They want someone to tell them what they want to hear, then lead them by the hand, then complain about it later that they have no say, just so that they have something to complain about.

In that context, I learned a lot about what a good politician does. And a lot about the 'herd' instinct in humans. Happily, too, I learned I'm not a politician because I refused to enter the world of double-speak. I talked issues, my opponent(s) danced around them and talked about nothing, actually.
Which is, interestingly enough, why I don't hold politicians in high regard. The best politicians are rather like circus and magic people, when you come down to it: now you see it, now you don't. They're actually into entertainment.

Sleep well, Paul.

Regards,
Vince, WB2EZG

Brings up an interesting point Ed, how many folks operate spread spectrum Morse? Does anyone in fact do this? (serious question)

Why the construction requirement? Do I need to build a computer for the PSK31 as well?

I will concede that someone who has the ability to construct a spread spectrum transceiver is superior to me in that respect.

Back when my eyes were good and my hands were steady the smallest active element I had to deal with was a 6AQ5, now I can barely see a surface mounted component, let alone solder the dam thing.

Strange, I didn't hear KC8JBO, just a bunch of identifieds. Riley can't
do much with the unidentifieds.

He needs to be off the air like WB2OTK and some of the others.

What others?? The people who were thought to be the " Biggest "
troublemakers are gone, examples: KV4FZ, KT4TR, W4FQF, W4LLI, K4OKA,
K4VVV (Little Richard drunken disc jockey), gone from 14.313, but the
qrm'ing continues. Rich WB2OTK wasn't/isn't the problem. The problem is
the inability of the FCC (and, this isn't Riley's problem) to fund
people to track them down.

It's doubtful if any " official notices will come out of this. Most of
the rhetoric has been from NG's and newbies.

Of course it does, same as it makes me better at that skill than one who has never figured an exposure problem.

Ed, the demonization of someone being superior is a product of the feel good generation. Soccer games for kids that do not keep score ,so no one feels bad. Gradeless classes for the same reason. One could go on forever listing the esteem building exercises.

The reason you see such vitriolic response, is for many this is the first time in their life they have been told they don't measure up. Do you not sense the "it's my God given right to be equal in all respects regardless of effort" attitude in the responses?

I exist, therefore I deserve... (stolen from another post)

Does a superior skill make be better than someone else in the grand scheme of things? Nope! But the interpretation today is if you claim a superiority in any field, you are doing it to "hurt the feelings" of those that don't have the skill.

I personally don't give a red rat's hindparts if anyone ever learns or uses CW, I do care that they find it offensive that someone else has acquired the skill and that the longest threads on the newsgroup are the apologists for the code challenged.

Enjoy what ever privileges they may have and knock off the nonsense, until then I shall enjoy demonstrating the absurd with absurdity.

Hopefully, "DX405" will get a better job so he can afford something
other than CHEAP-ASS RADIO SHACK RADIOS.
But cheap is as cheap does......

I don't think anyone would take any objection at all to a statement that you are superior in a particular field. Let me try it:

I can copy 45 wpm in my head and 25 wpm on paper, so I am a superior CW operator to those who cannot. -- Ed

What they would object to is a statement they believe implies that such as skill makes me superior to them, without any mention of what field. My superior CW skills may indeed make me a superior ham, unless that non-coded op has an even greater accomplishment somewhere else that overshadows mine. And, I will add, that I do NOT believe that my CW copying skills are the greatest accomplishment I have in ham radio. Nor do I believe that my own accomplishments put me at the top of the "superiority" heap; there are others who have, IMHO, done more for ham radio than I have.

> I personally don't give a red rat's hindparts if anyone ever learns or
uses
> CW, I do care that they find it offensive that someone else has acquired
the
> skill and that the longest threads on the newsgroup are the apologists for

I don't find it offensive that you have aquired CW skills, nor do I find it offensive that others have not.

Although I agree that it is important to keep score in a soccer game, I do not believe that it is necessary to keep score in everything in life. Maybe this would all make more sense to you if you viewed it as personal accomplishment instead of another game of who-tops-who. I judge my own accomplishments only by my own standards. I do not need to hold them up to anyone else's accomplishments to feel that I have done something worthwhile.

If we are going to have a wager that is analogous to the requirement to manually decode Morse code, I think the manual requirements of construction are an important part of the analogy.

> I will concede that someone who has the ability to construct a spread
> spectrum transceiver is superior to me in that respect.

Yes, just like your ability to receive Morse code fast makes you superior to him in that respect.

Just remember, there are about 650,000 of us, and if we are all assigned a superiority rank, only one of us will be #1. The rest of us are all probably somewhere well down the list.

> Back when my eyes were good and my hands were steady the smallest active

Fortunately, you can look at a lifetime of accomplishments and not have to rely on any single of one of them for a sense of self worth. Maybe that applies to all of us.

Did the ARRL advocate ignoring the rules, or changing the rules?

I think the biggest issue here is that some think of SS as a 'digital' mode.
The most common application for SS is for voice communications.

> One amateur band somewhere in the spectrum would be
> ideal for DSSS or FHSS trials. I would think it woud be
> preferrable in an urban area having many potential users,

I think that 2.4 GHz would probably be the best first choice. There is
certainly a lot of equipment coming available for that frequency range.

> There is one problem at present, a very big one, and that is
> standardization of the SS characteristics. At present

Or different characteristics and not hearing each other. :-)

Maybe the Bluetooth spec would be a reasonable starting place. Start with
the chipsets or steal the board out of the first low-cost device to have a
Bluetooth board in it.

I think you have the mental ability to answer your own question, however if you actually need the reason ABC has not posted the final results, e-mail me and I will be glad to enlighten you about the liberal media without taking up newsgroup bandwidth. I seriously hope you are kidding about ABC being your final authority on anything. Tell me what you have seen on ABC about the brutal killings in Kansas?

Why would you consider it fantastic memorization that to this day, I still remember that I didn't have a clue about the question about the impedance of open wire line, or that I didn't know what a parasitic oscillation was, but knew it had some effect on interference, so I guess right. A memory that can't hold onto such generalizations is a pretty poor one.

There was no question pool in those days.

> How many times did you have to take the exams?

Once. Other than blowing a few questions, it was pretty easy for me.

Do you believe that it should be illegal for people to talk about the
content of the tests after they have taken them? Do you believe it should
be illegal to print information about the content of the tests after they
have been taken?

Do explain how the Bill of Rights fits in with your answer.

FB. Let's save that for later...

> I didn't get my ham ticket for the singular purpose of being able to
empower myself
> by projecting my voice over long distances at the press of a button.

From what I have read of your posts, you think everyone else gets their
licenses only so they can project their vioces over long distances at the
press of a button.

> Moreover, having had that capability for my entire career ham career, I've
always sought,
> and utilized, more challenging modes.

But no one else does?

> I consider myself to be well-qualified to hold the highest, most
> distinctive class of license.

I believe that you are well qualified, and more. But you didn't get all of that qualification solely as a result of studying for your tests, it comes from years of being a ham and:

> I became a ham after years as an electronics hobbyist, and passed my

> I've had nothing handed over to me on a silver platter;

Sure you did, at least as far a licensing is concerned, you took a test that was much more simple than the level of knowledge you possess right now.

> becoming a ham meant enough to me to learn the practical communications
> skill which is Morse/CW.

You are correct; being a ham means enough to people that they will learn. That is why they want to be hams.

Yes, fully. Personally, I truly believe it was timed with
"Amateur" restructuring to move hams down from VHF to HF,
and geared to show newbies to the HF bands that HF was a
hospitable place to live. That's my opinion, and I'll stay by it.
Knowing the history of the deregulation issue, I believe it's a
fully logical conclusion.

Would you advocate that the rules be written to require all amateurs to
possess the skills *and* equipment to operate any particular mode or lose
their license? That would be a better way of ensuring that they met that
goal.

I do not believe that the people who were sending code poorly were new
operators, Dick.

> > Would you advocate that the VEs determine that a ham has working RTTY
equipment

Yes, I do know it. But it is exactly analogous to the belief that an
applicant must demonstrate proficiency in Morse code before being allowed to
try the mode on HF. People would learn the mode, or write some really cool
software, before trying it, would they not?

No explanations are necessary for statements one extracts from the nether
regions of their anatomy.

"I believe it, ergo it is fact" is the operative phrase here.

It's not just a leftwing issue. Libertarians are opposed to the censorious policies of BOTH Republicans and Democrats locking Third Parties out.....

The whole Left-Right congame is over!!!!!!!!!

W4JLE <Fred@w4jle.com> wrote:

> You never did answer the question if anyone actually operates SS Morse?

Not to my knowledge, Fred. While one could do FH or DSSS with Morse encoding, on-off-keying would be a pretty bad choice for SS. One could use one of the FSK or PSK modes with Morse encoding, but it would not be optimum, either.

Of course, not all amateur radio needs to be optimum to be fun. Perhaps a simple BPSK signal, with Morse encoding, could be frequency hopped successfully.

The big bummer here for me is that I have far more dreams that time; I think that RFI and related spectrum issues for ARRL will probably represent the majority of my accomplishments for a while. Of course, I do have this Hare-brained idea for a 2X QRP EME QSO. :-)

Why would you equate passing an upgrade with name calling, Richard? Whether upgraded on April 14 or April 16, those who upgrade have done no more wrong than to do what the law requires to get a particular type of license.

If someone wants to upgrade after April 15, what tests are they going to be given an opportunity to take?

Well, I am not better than everyone else. I may be better than some, in
some things, and I suppose that if any of were really given the authority to
tally up the score, I might even be better than some overall, but others
would blow me away. I much prefer that I not be judged at all; just let me
be a ham who operates as required by Part 97.

I did attend a midnight session of the Royal Order of the Wouff Hong. Does
that count for anything?

Although I am sure that some of our members prize manual code speed over nearly anything else, but let's take a little poll right here. Of those that are ARRL members, how many of you would like to see an article that describes how to use software to reliably read Morse code in the presence of noise and poor timing?

Count me as vote #1 for yes. I pony up my dues every few years.

Larry Roll K3LT <yodoc@aol.comnospam> wrote:

> If growth isn't one of "our major problems," what do you think they
> are? And how will a zero-WPM, one-class license fix them?

First, let me be clear that I do not believe we should have a one-class license system. Though I believe that not grandfathering existing licencees when incentive licensing was put into effect was a mistake, I think that the premise of incentive licensing is appropriate.

The biggest problem I think we face, Larry, is one of spectrum. That will be solved as much by useage of the bands as it will anything else. Let me turn the question around and ask you how having a multi-WPM test series will solve that problem?

Another problem is that we are not seen as being relevant by many in industry and at the FCC. How will having a multi-WPM test series solve that problem? IMHO, this is the most important reason to replace the Morse code tests with tests relating to newer technology.

When the no-code VHF license was introduced, there was a sudden influx of newcomers for which there simply was not sufficient Elmering. How will having a multi-speed code test series solve that problem.

I see the petty bickering that is taking place here and elsewhere and the sour grapes and/or gloating as being harmful to the amateur radio service. How wil having a multi-speed code test series solve that problem.

What problems do you think are facing the Amateur Radio Service and how do you think having a multi-speed code-test series will solve them?

Of course it is, CB Dick.  Follow the thread up and you'll see my
position again and again.  Its there for all the rest of the world to
read.  But no, you won't do that. You're better than the rest of us.

 "Admitted CBer"? Nope. Clearly Stated Legal User of CB
for
> mobile RV use,
```

So you admit it yet again? Didn't you post a CB call sign once?

In this logical conclusion, are there now fewer VHF-only licencees than there were before the FCC took the sneaky back door approach you believe they did? If so, cite the source. If not, explain why it backfired.

Why do you think that the FCC didn't simply reallocate spectrum if they felt that they didn't want us there? The real action is above 1.2 GHz (higher frequencies generally mean that spectrum can be resused every few miles, so it is quite useful nowadays to be high up). Do you believe that restructuring is going to have a significant impact on amateur occupation above 1.2 GHz? What do you think that effect will be?

That's because they want to be accepted into ham radio and obsolete
hams thinking obsolete thoughts won't accept them. The thing that
defines a ham is a ham license. If you don't believe it, ask the
FCC. I have all amateur privileges. It matters not a whit that my
palsy and arthritis prohibits me from sending 20wpm anymore.

Sure, Ed will speak for himself. I first wandered across 14.313 about 5
years ago, out of curiosity. It was bad enough that I didn't go back for
years. A few months ago, I listened to 14.313 and heard -- a maritime net.
Glad it was better, but I haven't listened since.

Is there a specific reason I should? I don't operate much SSB. My Omni D
does tune 14.313. Once in a while, I go all the way up to the county hunters
net on 14.336. More often find me on 14.060 (QRP) or 14.0565 (the CW county
hunters hangout).

Thanks Dean, for the off topic posting. Nothing you said has anything to do with the code requirement. It is not political correctness, it is progress. The old guidelines are obsolete. Common ground cannot last forever. If it did, we would all have to ride a horse before taking a driver's exam. Equal access to public property is guaranteed by The Constitution. Pride is not a requirement. Outmoded rituals are not a requirement. The simple fact is that the Morse code requirement is obsolete in the 21st century. The rest of the services realize it and it is an albatross around the neck of the Amateur Radio Service.

> asked on any actual exam you ever took. I never saw that
> question on even my Novice exam.

It was definately prominently featured in the study guide for the Novice exam I took. I really don't remember much about the Novice exam, but I am sure it appeared on at least one version of the Novice test.

I was absolutely astounded at how easy those 4 pages of study guide for the 1963 Novice exam really were. All of the questions I thought I remembered about feed lines and antennas and propagation weren't there at all. Frequencies, power levels, a few rules and Ohm's law just about covered it.

> it's time for hams taking those exams to start complaining
> about dumbing down.

I scanned the 4 pages; I think I have them at home. I will have to post them, if I remember to email them here. Maybe we should make the entry-level exams hard again so that new hams have to study 4 pages to get them.

Cecil:

What if a situation arose where people's lives depended on
communicating with the outside world, and the only mode that
would work was some form of Morse/CW? Ever hear of a
fractured larynx? What if the only HF transceiver available
had a choice between SSB or CW, and there was only a single
gel cell battery to power it? How long could it transmit on QRP
CW as opposed to SSB at 100 watts?

The problem with the Morse/CW mode is that in order to
effectively exploit its practical advantages, one needs to know
the Morse code! Can you at least agree to that?

Ed:

Yes, on 2-meters, perhaps a 200 kHz segment on 10-meters if they found a way to survive the brutal 5 WPM code test already.

>
\>>Of course, this is obvious to everyone but you.
>
\>What is obvious about Bill Sohl's desire to end Morse code testing? He can

Obviously, he wants to be a big man among the slouchers in his club. Being supportive of continued code testing is a highly unpopular political position; it requires anyone who holds it to take a lot of anger from the slouchers -- something I've lived with for years. Bill obviously doesn't "need" that kind of grief. I don't either, but I get it anyway, because I am not afraid to express my opinions clearly and with conviction. Bill goes with the flow, and gets to enjoy the good will of his fellow hams. I go against the grain, and get hatred and regular back-stabbings. I can very well understand why a person who desired a normal social life among his fellow amateurs would take Bill's position. After all, being "politically correct" is a high priority among hams these days.

Ed:

I'll look forward to reading it. Please send me a copy via E-mail, since I don't usually bother reading the newsgripe during the work week, since I'm usually never home before 7 PM and usually have to be out of bed again by 4 AM.

>I cannot answer the second because I do not believe that we should have a
>one-class license system.

Please consider that what you believe we should have, and what we end up with, are likely to be two different things. I can easily see all ham radio privileges given away with a single multiple-choice "written" test. It would be the ARRL's last desperate attempt to entice people to join up, considering the abject failure of Restructuring so far.

>I also do not believe that our licensing system
>should contain no Morse code testing. I believe that Morse code proficiency
>should be tested the same way we test for proficiency in other modes.

I see. So asking multiple-guess questions *about* Morse code operation is now the equivalent of actually testing people on the skill of sending/receiving Morse code texts? That is nothing but more dumbing down; more pandering to the lowest common denominator. You forgot to tell us how this is going to lead to high-speed, high-throughput digital communications magic being performed on the HF airwaves -- or how it is going to drag thousands of young people away from their Web browsers, DVD players, and Sony Playstations! Oh well, give it a try, anyway -- I don't think anything like the opinions of current, pre-April 15, 2000 code tested hams is going to stop you!

Cecil:

Don't look now, but a person can live a perfectly normal, healthy, and happy life without ever becoming an amateur radio operator. I am the only licensed ham in my immediate family, and I assure you, my parents, brothers, sisters, girlfriend, nieces, nephews, and scores of friends are all very happy, indeed, without a ham license in their possession. You really need to come up with a better argument than that!

Cecil:

And the fun of Morse/CW operation is exactly what kept me going,
after I overcame my zenophobia and put in a good effort to learn
the code. I now regret the 14 years of fun I missed while I spent
that time loudly objecting to code testing requirements.

Brian Kelly <kelly@dvol.com> wrote:

> Just DO it, it's your lab right? Oh, never mind . . !

The Lab testing is under my control and I try to make sure that equipment is tested within a few days of its arrival. Usually, a rig like that will spend about 5-8 days in the screen room, being tested thoroughly from DC to daylight.

Sometimes, a key accessory, like a filter, may be on back order, so that can delay the process. From there, the radios go to a reviewer, or, more likely, several reviewers. That is the part that is NOT under my control, even if the reviewer happens to be a Lab guy. The reviewers are contract authors, paid the standard page rates. (Policy is that staff, officers or Technical Advisors can do reviews.)

The test results, btw, are summarized in the test-result table in the review, and for most rigs into an expanded test-result report. I put a sample up at http://www.arrl.org/tis/info/pdf/k2.pdf, if you want a quick link. (This is on the public site.)

Larry, are you a split personality? Last thing you said about the
subject is that the 5wpm requirement might as well be done away
with. That's what Bill is advocating. Both of you guys agree that
there's no longer a good reason to have a 5wpm requirement.

Yep, it's digital voice. Just shows how outdated our nomenclature is.
Seems the sub-band divisions should maybe be classified narrow band
and broad band.

>not, explain why it backfired.

Where does logic say the number of VHF licensees at this second directly relate to FCC's initial move to restructure and deregulate? Where are the comments that say the FCC "took a sneaky back door" approach? As John Madden would say, FCC's actions were "smash mouth, in your face football." Go back in Dejanews as far as you want: my comments have always been that deregulation was a done deal from the start. I don't know what you think you're doing, son, but it ain't getting done.

You seemed to have missed the point entirely, Larry. I was talking
about CW. In the present amateur radio environment, if it's not
fun, it's not practical. There is no other incentive for a ham
to know Morse code anymore except for the fun involved. If you
want to recruit new hams to Morse code, I would suggest you stop
telling everyone what a pain in the arse it was for you.

Don't know.  The only thing reported was that the question got asked. I
think I heard it on the Ollie North show out of a Rolla MO fm station.

In Ohio, we know what that answer is in relation to our National Guard.

There's absolutely no reason to require the skill if the equipment is
not also required. How can one use CW for emergencies without any
equipment?

The arguments are different. Jim says there is not one code-tested jammer
using Morse code equipment. I say there is at least one and probably more.

Vince's statement is an if-then statement which is, of course, false
since no test is perfect.

Yes, we know that Ed.that was then.This is now. BIG difference. Once it was all hams, until some entrepreneur saw a buck to be made filling a commercial need. Now it's nearly all commercial, with hams hanging on by the skin of their chins.

>

> foster that diversity in the Amateur Radio Service.

Total nonsense, and I know that you know better than that, so how can I NOT believe you are exerecising an Agenda? You know as well as I that it is simply impossible to operate CW without a minimum level of training and practice. Those who want to operate CW must undergo that training. Anyone who just hooks up a key or a paddle to his rig with the builtin keyer will fail right out of the gate and you know it as well as I. How can you at ARRL NOT to be merely trying to grease the skids for the demise of the mode?

>

> Do you think the same thing was said about the use of spark in the Amateur
> Radio Service?

No I do not. Spark covered a wide area of spectrum with a single

signal, and spectral efficiency alone mandated its abandonbment once
better technology was widely available. Now you'regoint to tell me we
have that sort of spectrum crowding problem today. And I'll send you to
scan the 70 cm band and report back.

> Do you think the Amateur Radio Service would have survived had
> it not evolved past that?
>
> > and some use no other mode, nor wish

>

So you've joined all the anti CW goons in slamming CW supportgers as
Luddites then? No one has EVER said anything about the ARS not evolving
and updating.
This entire squabble has been and continues to be really simple although
you and many others who really want CW totally dropped from testing
continually make it something it is not and never was. It is NOT an
anti-technology fight, as you seem intent on insisting. It IS
anti-laziness campaign. I believe that any worthwhile ham will agree to
learn CW so at to be able to use it, and I also believe that it should
be required of him/her to do so. A duty. Aw, that nasty word again. The
advance of technology and the evolution of the ARS has not a thing to do
with it.

Your reserve supply of arguments is clearly gone when you have to
resort to the assinine. You know what is being advocated here and it
isn't stupidity.

> >> Some commercial users have valid claims to places in the radio spectrum.

You might have noted that it wasn't I that made ANY claim.

If it quacks like a quack (false duck) it must be Cecil.

Who in the world is dumb enough to actually believe he can jam anyone with dits and dahs? You're just arguing to hear the wind blow, still. The jammers who actually jam use noise generators or steady carriers wobbulated to defeat your notch filter. They're not dummies, just idiots.

Jim is right,of couorse. You just don't hear that nonsense on CW. And you don't read about CW operators getting NAL's.

Here we go with the "what if" stuff. What if the aliens landed
and cut out all our vocal chords? Get real, Larry. Your scenarios
have the chance of a snowball in hell. They have never happened
and their chances of ever happening are infinitesimal. You would
do better to use your energy on real-world possibilities.

Ed, how long are you going to keep up this charade? I knows it's not politically correct these days to reveal the fact that working CW does indeed require a bit more personal involvement than any of the other-read 'easy'- modes, the ones for which one needs basically only to RTFM. But it is no less true. Does you sense of what is true and proper not get just a little uncomfortable as time goes by and you find yourself deeply involved in propping up a total charade? For that's what it is.
You'd have just as much success taking off and landing an airplane without prior training and practice as you would successfully making a CW contact on the air without the necessary training and practice. And I'm sure that you know it.

Sure. Use K0HB for the noise, and W0EX for poor timing or just use him for both the noise and the bad timing. That ought to be a real test for any software.

Seriously, it would be nice to see some side by sides of software/hardware performance competitions from the pk, kam, universal, etc., as well as the cheapie baypac type.

QST has been doing well with the nec antenna modeling software, and I think it was World Radio that did the VOA Prop software. Both are outstanding directions for the future of the ARS. Keep up the good work.

While I'm dreaming, how about a how-to article for an ionospheric pinger that measures the critical frequency? A network of these might be as useful as the 20M beacon network. Too bad we would be out of band about 90% of the time.

Hey Ed, do you ever do 10wpm or should I turn on my SCS PTC2e?

Don't overlook the big point-again. Fred can easily operate those modes. Nocoders cannot easily operate CW. It takes a little personal involvement and dedication to skillhuilding.

Ten years from now, how are you going to tell welfare extras from
anyone else? Won't renewal time be a great equalizer?

It certainly is. Neither activity can be accomplished without
sufficient training and practice such that one can properly perform the
necessary functions to successfully complete the task. Some things
cannot be accomplished by "winging" it.

Not so. Jim said USING MORSE CODE, not equipment that can be used for
Morse code. In that case any radio capable of being keyed as a CW
transmitter would qualify.

If you like propagation, go to http://elbert.its.bldrdoc.gov/hf.html and
download the HFWIN software. This is about the coolest freeware I think I
have ever used! It will give IONCAP predictions, from city to city,
complete with either frequency vs time graphs or world maps of signal
contours. I promise it is worth the price!

Well, I hear enough of these pingers in band, so somebody is doing it! :-)

Dick, you forgot the smiley.

I learned CW in 1963, from a chart and by saying dit-dah in my head a lot.
W1BNB sent code at 5 wpm and I copied it. I got my Novice. When I made
that first shaky CQ, I do not believe that I had anything more than this
self training, and absolutely zero practice.

Do you really believe that if W1BNB had not checked my code speed at 5 wpm,
that I would not have been able to get on the air and do my first shaky QSO?
I would not have done so until I knew the code.

Would you ever sing a song in front of a large group of people unless you
knew the words?

Do you really equate my learning code at a shaky 5 wpm and making a QSO that
I wasn't really ready for with flying a plane?

Can you tell me where I can buy the manual and black box to operate spread spectrum?

Now, if all of these new hams can memorize over 1,100 questions in the question pool in a weekend of studying, I am sure they can memorize 26 characters and a few punctuations "easily."

I do agree, though, those who don't know Morse code can't easily use the mode. They would have to buy a TNC and read the manual. :-)

I am curious, what can Fred to easily operate spread spectrum?

And many are like the message I am enclosing copied from Rec.Radio.CB, I forward sans comments:

I have to agree with you there ken. I am a Ham operator with a tech no code license. I like DX, that is the main reason I use radio. Right now I can talk useless (to me) Vhf now but no HF unless I use 11 meters. So about the only DX IM doing is freebanding until I suffer through these tapes and learn this stupid code. I can already pass the General exam and I'm studying for the Extra, but all my DX is on 11 meters.

Plus when I go out 4wheel driving and want to keep in touch with my XYL (wife)if I use regular CB it is to crowded, and she dosn't have a ham license so what freqs do I use??? You guessed it, I go above channel 40 on 11 meters. I don't bother anyone and I have safe comm with the XYL.

The main thing about freebanding is to use courteous operating procedures, good equipment, a Low-pass filter, grounded gear and not to much power.

Let alone the fact that on/off keying is not Morse. A string of dots or
dashes at 60 WPM from a built in keyer does not a Morse operator make.

Of course, learning CW can be accomplished by "winging" it since there
is no punishment for doing so. The reason that one cannot "wing" learning
to fly an airplane is because one winds up dead. The only thing that
happens to a poor CW operator is that the other operator pulls out or
the QSO cannot be finished. It's no big deal if a QSO cannot be completed.
It happens all the time because of fading MUFs.

The only CW-only bands in the entire amateur radio spectrum don't
require Morse code for the license. That proves that the FCC thinks
CW can be learned and accomplished by "winging" it. Why should HF
have any different requirement from the CW-only bands?????

If one applied your desired rules to speech, babies would never be
allowed to try to speak until they were fluent. Is that really what
you want?

Can you point to anything that the ARRL has said that makes you believe that
it favors a single multiple choice "written" test?

> >I also do not believe that our licensing system
> >should contain no Morse code testing. I believe that Morse code
proficiency
> >should be tested the same way we test for proficiency in other modes.

No. I believe that the test should contain a sent Morse code transmission
and that the applicant should be asked questions about it. The way it would
be tested the same as other modes is by including the answers as part of the
overall score. 75% passes.

That's not true. I dismiss anything that is irrelevant to the
argument. Music is not listed in the list of languages in the
encyclopedia. Neither is Morse code. Just because you want to
confound the language is no good reason to allow you to get
away with it.

Yeah - to Tech Plus so they could get on 2 meters. Basic problem
remained.

Oh, probably not Ed. They would've probably just sat on their tails
and hands and whined and bitched for 12 or 13 years like a certain fella
who posts here a lot.

I will take that bet. Let's take the first 100 CW QSOs from the 2001 W1AW
logs from those operators whose age can be identified from the birth dates
at the QRZ site or ARRL membership records as being either between 50 and 75
years of age or between 15 and 40 (inclusive). At 20:1, that would mean
that 95 of the operators on the other end are 50-75 5 15-40.

Steak or lobster? :-)

Nobody said anything about Morse operators. The accusation is that
Morse equipment is being used by code-tested hams for the purpose
of jamming. The answer is obvious.

The same dumb $hits who listen to 3950. Try it. You will hear CW
equipment being used for the jamming by code-tested hams - guaranteed.

All BS aside, I can appreciate SS for military or commercial communications. As a ham mode, one would first have to make a standard contact, then agree on the spreading code and then switch to the mode. I admit ignorance as to how SS is being used on the ham bands, is there a standard spreading code and base frequency? While I may be in a self imposed minority, I can't see the utility of the mode for normal Amateur operations.

If one were setting up a traffic circuit or internet via amateur radio it would start to make more sense. That would raise another point as to how one could use the internet over amateur radio, given the bent towards the profane, and posting by people from countries without a third party agreement. What am I missing? Given a reasonable use, I would be glad to dig into it and at least learn on a rudimentary level.

PSK31 is a mode I might find tempting if I didn't live on 30 acres with no antenna restriction, and my nearest neighbor almost 1/2 mile away.

```

Do you believe that having a test that emphasizes one more over all others IS infinitely multfaceted? Do you believe that emphasizing one mode will foster diversity in the Amateur Radio Service?

>You know as well as I that it is simply impossible to operate CW without a minimum
> level of training and practice.

Of course it takes training, but for most hams, it is self training. As to practice, I got all of mine after I got my license.

> Those who want to operate CW must undergo that training.

Those who want to operate CW must either learn the code or buy a TNC and read the manual.

> Anyone who just hooks up a key or a paddle to his rig with the builtin
> keyer will fail right out of the gate and you know it as well as I. How

Why would I want to end the mode that I use 99% of the time? Do you really believe that I am not posting what I personally believe?

> Now you'regoint to tell me we have that sort of spectrum crowding problem today. And I'll send you to
> scan the 70 cm band and report back.

Why would I want to tell you that, Dick. I have said a number of times that our occupancy of the higher bands is low. Did you miss the posts?

> So you've joined all the anti CW goons in slamming CW supportgers as
> Luddites then? No one has EVER said anything about the ARS not evolving
> and updating.

> It IS an anti-laziness campaign.

The difficulty of the present entry-level tests are already much much harder than they were when I studied those 4 pages to be a Novice. How can you say it is a laziness issue?

> The advance of technology and the evolution of the ARS has not a thing to do
> with it.

We agree.

> Your reserve supply of arguments is clearly gone when you have to

Dang Dick, you are the next Yogi Berra. Talk about mixed metaphores.

> You know as well as I that it
> is simply impossible to operate CW without a minimum level of training
> and practice.

But the question is: Why can't that training and practice take place
on the air? One wonders why you want to keep the airways all to yourself.
Did you refuse to allow your children to talk until they had mastered
the English language?

> So you've joined all the anti CW goons in slamming CW supportgers as
> Luddites then?

You are NOT a CW supporter, Dick. You have discouraged more potential
hams from ever trying CW than anyone else I know.

> It IS anti-laziness campaign.

It is an "I had to do it so you have to too" campaign. What is wrong with
live and let live? Why should everyone be forced to learn your personal
favorite mode?

VB> Either way, NOT the actual exam.

>I'll post the study guide and let folks decide for themselves.

Let's get this straight, so I don't misunderstand: If you can
post the STUDY GUIDE re: your Novice and show that a question was
asked about the unit of resistance in the ACTUAL FCC TEST you
took for Novice, I'll nominate you for the Nobel Prize in
Literature.

Yeah, they followed the rules right out of the ARS into the Freeband
where there's no one like me to tweak their tails. some of you seem more
than willing to welcome whatever shows up at the door with a free
license, and then lament the nonsense they bring with them.

VB>I'll make it easy for you to find, Paul: Among my letters to ARRL include
VB>my newsletters sent to the division membership during all my runs for director
VB>(that's an ARRL rule). Easy to locate, all in public forum.  One of them
VB>especially went into detailed discussion about what to do to protect/improve
VB>the Service re: deregulation. They will also have my 300-word statements (as
VB>part of the ARRL mailouts) on file. They will also have on file two letters
```

VB>concerning my proposal to initiate the (first) Spectrum Protection Act (which
VB>they allowed me credit for on at least one of my 300-word statements).

>Are you saying that all of these important documents only have copies at
>League HQ, that is, if they were retained by them at all? Since the
>League is an organization you have much disagreement with, I'd expect
>that you'd keep personal copies of this important correspondence about
>examination reform, spectrum protection, ARRL electoral politics
>including "dirty pool" by other participants/supporters, etc., in case
>there is any disagreement about content.

First, the documents are not important at all. What I am saying is get your proof of their existence from ARRL, since you could always say I've just generated any letters I might give you and what I say is not true (which is what you've long attempted to show in any case). Arguments with the League aside, ARRL would not be so foolish as to doctor a public record.

>By asking the TIS for everything, I was inquiring if there were letters
>to the editor, or other small items not in the public indexes (their
>internal indexes, or even institutional memory such as experienced
>staffers, might be more detailed than the indexes at www.arrl.org, or in
>the December QST's each year).

There was one letter to the editor c. 1969 regarding the Extra Class exam. A lot of correspondence to ARRL staffers such as Doug DeMaw, Lew McCoy. Mostly technical exchanges, some political ones.

VB>If ARRL has none of these, a summary of all those suggestions to improve
VB>the exam process per se was filed with FCC in their restructuring proposal.
VB>On the FCC site, in public forum. In only 4 pages, as I remember.

>Be assured that that was read by me very shortly after it was made.

Make sure then that ARRL gives you a copy of that document. I sent them one.

There have been other letters sent to HQ hierarchy over the years, starting c. 1964 with George Grammer, then various presidents in office, and Dave Sumner. The vast bulk of them, tho, are political, starting in the mid 80s, then picking up again in the mid 90s with the ARRL poll written by ARRL's First VP and I believe the GM and possibly ARRL president. A poll so badly done it drew slashing criticism from even one ham who was a social scientist (K4JAP) in the business of designing polls. The response was so incendiary, Dave Sumner initially denied even receiving some of those letters. All the ARRL had to do was hire a professional polling firm to construct the survey. But no, they had to do it their way.

They received a letter from me on that, warning of the consequences of doing a poll written by amateurs. AND they received a letter from me afterwards, but by that time K4JAP had actually beaten me to the punch; instead of providing his own professional critique on the poll, he referenced my letter! (Still ARRL couldn't get its no-code/slow-code thing through.)

But I digress. One of my exchanges with the Pres, in speaking about the poll, also went through in detail what was happening to the theory exam process, and what specifically needed to be done to fix it.

SO MAKE VERY SURE you receive a copy of THAT letter from the ARRL archives. If you don't get it, they've either trashed all that correspondence, or they're not giving you all they have. Time to get down to the nitty-gritty on this one. But ARRL will do the proving for me, just to demonstrate I've been involved in this thing for 18 years in no-nonsense fashion.

Regards,
Vince, WB2EZG

Uhhhhhhh Dick, last time I checked, "skillhuilding" was illegal,
immoral, and banned by the Catholic Church since the 7th century.
Such a pervert, tsk, tsk.

Absolutely false, Dick. One way you would be dead. The other way you
would just continue learning Morse code. Do you advocate killing all
the babies who are not fluent when they utter their first words?

He'll never understand, even when being a ham radio operator is fully
the equal with being a CB operator or a Freebander. He thinks all are
the same.

Whose mind, NCI, FISTS or ARRL. I am sure that the basic agenda of NCI and FISTS is pretty well set, but just how both organizations will undertake their basic missions will, IMHO, be influenced by member input.

I will also tell you that I don't believe that ARRL's mind is made up on this issue. If it were, the Board would not have seen any need to publicize the agenda item well in advance. Frankly, I wish the Board would do more of that, whenever they can.

I know that the last time I talked to Tom, he had not received very many member inputs on the topic to be discussed and possibly voted on at the January meeting. I am sure your Director is in the same boat.

See http://www.arrl.org/divisions.

SS is probably not well suited to "random" QSOs, as are the narrowband modes, although an SS repeater is very much a possibility. In that case, the spreading code or hop sequency would be used the same as frequency.

Unfortunately, SS is not at all in significant use in the ham bands. For a rundown of the current useage, see http://www.tapr.org.

If they obey the rules within the ham bands, who cares where they came from? If they are operating legally as hams within the ham bands, they aren't freebanders anymore, are they? Seems ham radio has saved them from a life of crime. Seems that is a good thing to me. Do you disagree? Do you condemn anyone who has not lead a perfect life like you have?

Have fun with it. It is a popular mode. Some hams have reported decoding
signals they could not hear by ear. :-)

That's petty well how it happened, along with the caveat that it gave
FCC a
very easy out of the problematical Medical Code Waiver dilemna. Riley
himself made the comment on how a "few people can change the world-they
just did" WRT the restructuring.

I don't think he is comparing the severity of the failure to accomplish the task, simply that the two compare in ability to complete the task.

And just how have you made that determination.
I've seen no lessening of VHF use here in NJ.

I think the study guide will let people decide for themselves, Vince. It was, after all, derived from the FCC-published syllabus. For the Novice exam, things were kept pretty simple, so they stuck to the syllabus pretty closely.

If you feel the best way to persuade people to make up their minds your way is to remind them that I don't deserve a Nobel prize in Literature, I won't mind.

For almost everyone it IS a real pain in the arse! Why are so many
easy accessers so opposed to it? Not just because "we never plan on
using it".
No one planned onusing it beyond the time the phonelicnese arrived. Most
of us found the benefits and value of it only after putting up with the
pain until we passed that point. When one approaches it from a "I don't
want to and I shouldn't have to" angle it makes it much harder to to
than if one takes it on as a task to be accomplished.

Again,Cecil has twisted the subject to fit his own Agenda. What Jim
said was that NO NAL's were ever issued to any operator for operation
using Morse code.
Then Cecil not so subtly changed the entire situation to a "using Morse
code equipment" theme, contrary to the original. He ignores of course
that any ham radio transciever is capable of Morse code. And as Fred
says, keying a key or keyer to cause an RF carrier doesn't make Morse
code. Any Freebander who has no ham license but does have a ham
tranceiver for his bootlegging operations can have all the CW sending
gear he wants,and many are said to have it. The one jammer case that I
personally know of was not a licensed ham at all, but he jammed with a
carrier and audio.

Dick, if you keep that up nobody in the world will want to learn it.
For me, Morse code was fun. My cousin and I learned it without any
rewards. It was trivially easy to learn. It is so trivially easy
to learn that a Morse code requirement just doesn't make any sense.

It is simply NOT TRUE that the tests emphasize one mode over all others. Morse code is simply not subject to testing that does not include the ability to function as an operator using that mode.That is no different than it has been for a hundred years. All assertions otherwise are smoke and chaff.

What I can't believe is that you really truly believe that any significant number of todays hams will ever learn it if they don't do it for a test. It just doesn't compute based on history.

You really don't want to read all that again, factual as it is.

It is very easy to believe that the wheels at ARRL are resigned to an ARS of any kind, at whatever level FCC decides to drop it to, in the desperate hope that it will be able to remain in existance at all.

>so they stuck to the syllabus pretty closely.

Ed, having just admitted you don't remember what was on your Novice exam, you know not of what you speak (in my opinion; no offense). On the other hand, I for a fact remember that question wasn't there. And the reason I remember it is that I specifically remember saying to myself "even the Novice exam wouldn't be so trivial as for them to ask me what the unit of resistance is. The test is a giveaway as it is!" The only break I could possibly cut you is that some exams had that question, by chance. But I've yet to run into one that specifically remembers it. Just too easy. Ridiculous, in fact.

Regards,
Vince, WB2EZG

Ten years from now, if there is still an ARS, the only class in existance will be Extra. When FCC drops all the other classes they won't dare off end or insult anyone by renaming their license, so they'll have to make every licensee an Extra. Whatta concept- the no code, no theory Extra!

That's what they started on April 15. I doubt it'll take ten years to complete the job.

How you can delude yourself and attempt to delude others is beyond belief. One exam is for Morse code. One exam is for everything else in ham radio combined. If one flunks either exam, one doesn't pass. Therefore, the Morse code test is EQUAL to everything else in amateur radio combined. Each exam is pass/fail. Exactly what is it about this situation that you don't understand?

> What I can't believe is that you really truly believe that any
> significant number of todays hams will ever learn it if they don't do it

What I cannot believe is that you believe in a tyranny of testing where
one mode is considered as important as everything else in ham radio
combined. Where is your sense of justice and fairness?

So exactly what is wrong with CBers and freebanders who enter the
ARS and obey the rules? Aren't you, in essence, advocating a sort

```
of racism? Black = 0wpm. White = 20wpm. Hispanic = 5wpm. Asian = 13wpm.
Blacks don't deserve equal rights.

Replay #976.... They don't memorize the questions and answers, they
make word associations so that when they read a question they look for
the familiar choice among the possibles, and can pick it out often
enough to pass. That's after studying only a single test element, not
the whole question pool. Vast difference, but you already knew that.

Ok, :-)

> I learned CW in 1963, from a chart and by saying dit-dah in my head a lot. W1BNB sent code at 5 wpm and I copied it. I got my Novice. When I made that first shaky CQ, I do not believe that I had anything more than this self training, and absolutely zero practice.

Ah,but you DID have training and W1BNB sent you some code practice. Enough to get you started. Do you equate all that to a couple written questions on a written exam?

> Do you really believe that if W1BNB had not checked my code speed at 5 wpm, that I would not have been able to get on the air and do my first shaky QSO? I would not have done so until I knew the code.

Do you really believe that no ham who had never had that Novice style training and bit of practice would get on the air and give it a go anyway, with a lookup chart, at .00001 WPM?

> Would you ever sing a song in front of a large group of people unless you
> knew the words?

I can't carry one (tune) in bushel basket.

>
> Do you really equate my learning code at a shaky 5 wpm and making a QSO that
> I wasn't really ready for with flying a plane?

Well, my first solo was no masterpiece either, but I did make it back. The second time around was better. On the third, full of newfound confidence, I let it get a little slow just before touchdown and the Cessna 150 stalled -quit flying- at about three feet off the ground. It fell the rest of the way with a thud, bounced and bucked like a wild bronco, and I got the world record for a short rollout, no more than 50 to 75 feet. I didn't know it, but the stall warning indicator wasn't working.

My instructor, who was watching the whole affair from a runwasy marker nearby, made me get back in and take it around again, just for grins and to regain my aplomb. I never again let one get too slow on final.

That lesson was worth a lot of hours of ordinary flying. The lesson was that you never "have it made" till the machine is parked and tied down, and you never assume anything.

Cecil speaks from experience again, we see. He's about as looney as they come. No one "equated" any such thing. Equating is not at all the same as making a comparison. They DO compare. Neither can be done with no training or practice.

You're too dense to be surprised. Just because I've known personally only one jamming case that comes immediately to mind, that means I have no knowledge of any other? I can't read my monthly QST like you do? I guess you've been "personally involved" in dozens of jammng cases and that makes you an expert?

Weapons are not permitted on the steps of the Capitol. You could get arrested! An even better place to take the guns would be to Andrews Air Force base. Lots of things to shoot at there, and a great opportunity to size up the opposition.

You certainly do have a vivid imagination there, young man.

And if the requirement for Extra had been 1B, you would never have been able to work any faster than 13 WPM? I'm sorry, but I don't believe you.

Not a case of coming to any senses, as you stated your premise, any ham on the air is assumed to be licensed and if on HF has passed a code test. Out of this universe you select a group of jammers, out of that group some non-Morse operator uses a keyer to Jam.

The original premise was that of the people issued citations, those that operate CW were not among that subset.

Just as I agree with your premise as stated, the fact is that I have not been able to find a case of jamming by Morse operators that resulted in a citation in the CW portions of the bands.

I am aware that a number of disgruntled hams have operated over W1AW code practice, while one may find this reprehensible, I don't think you can interfere with a broadcast. At least I can find no citations issued.

You were being hypertechnical, and I am now suspicious that you may be the advisor that told Clinton to argue the meaning of "is".

No, actually I do have some nice equipment. Would you call a FRG 100 a piece
of trash. How about a 909 not to mention others. Riley been talking to you
lately. Actually as far as a job goes, I have one not to mention other means
of producing income. Something that would not apply to a bum like yourself.

Not really. Andy is probably the lamest AFB around. Quantico is in the
same neighborhood. Try that one.

>anyway? I'll even give you a quarter a page to cover your costs.

As I said Paul, get your info from ARRL. While you're at it, ask
them of the details of what's gone down the past 10 years
internally. I wouldn't want to skew the information
unintentionally, or just in case I've missed the fine details,

i.e., some nuances.

>Posting to news is such a bother, and sending E-mail is so easy.
>What say I just E-mail you my postings, and you can pass them on
>to rec.radio.amateur.policy for me from now on?

Better to post up right on this newsgroup, so there's no
misunderstanding of misquotes, etc. Everything right in the open.

Regards,
Vince, WB2EZG

>They DO compare. Neither can be done with
>no training or practice.

Dick is correct; one must learn the code before using it. One must learn how to fly a plane before flying it. The difference is that one teaches one's self Morse code. They can do so successfully in virtually all cases with or without any formal demonstration of that ability. People would not get on the air and try Morse code unless they had learned it first. For that reason, the plane analogy is technically correct, but not very useful to the discussion at hand.

>Ah,but you DID have training and W1BNB sent you some code practice.
>Enough to get you started.

No, he did not. I learned the Morse code from a table, saying "Q dah-dah-di-dah" a lot. He then sent about a minute of text and looked at my copy, asked me to send a few seconds and signed the form that indicated that I knew Morse code. If he had not signed the form, I still would have known Morse code. At that point, with or without the form, I was as ready as I was going to be to operate on the air. The only thing the form gave me was the regulatory authority to do so.

I know you know this.

>Do you really believe that no ham who had never had that Novice style
>training and bit of practice would get on the air and give it a go
>anyway, with a lookup chart, at .00001 WPM?

Sure they might. It is legal for any ham to do so on the only two CW-only sub-bands. If you believe that on-the-air operation should have a minimum speed, it would be more efficient to handle that with a rule about a minimum code speed. Did you recommend that in your comments to the FCC?

Which do you believe to be orders of magnitude easier -- teaching one's self Morse code or teaching one's self how to fly?

Equating an analogy that is orders of magnitude different than the subject being discussed is not logical.

>From: yodoc@aol.comnospam (Larry Roll K3LT)

>What if a situation arose where people's lives depended on
>communicating with the outside world, and the only mode that
>would work was some form of Morse/CW? Ever hear of a
>fractured larynx?

How many hams do you think have operated Morse code in an emergency because they had fracturered their larynx?

I miss the list of reasons to keep the code. "You might fracture your larynx
someday in an emergency" could be the #1 answer.

>What if the only HF transceiver available
had a choice between SSB or CW, and there was only a single
>gel cell battery to power it? How long could it transmit on QRP
>CW as opposed to SSB at 100 watts?

I would use the drive or microphone control to reduce power to 10 W PEP SSB;
that would consume less power than 5 W CW.

Reason #2, "You might only have a gel cell and not know how to use your drive
or microphone gain controls to reduce power on SSB."

>The problem with the Morse/CW mode is that in order to
>effectively exploit its practical advantages, one needs to know
>the Morse code! Can you at least agree to that?

Pretty much. You have said it is child's play to learn at 5 wpm, so I am sure
if someone chooses to exploit its practical advantages, they will do so.
Perhaps you would serve the cause more effectively if you expounded on the
practical advantages instead of the parade of demeaning statements you have
made to those who are not presently choosing to use the mode...

Your "no one" does not include me. I developed my love of the code as a Novice and when I upgraded to General, I didn't like phone.

I find it odd that you are "promoting" the mode by telling everyone how horrible it is. It seems to me that you are trashing the mode just so you can be right in this "debate."

I have not noticed any significant change in VHF useage since 4/15.  Is it
different in your area?  By what percentage has VHF use declined?  What licence
class shows that decline?  Can you point to any data?

>OK, what percentage of the pre-99 Extras participated?

What part of "I don't know" did you not understand? I would wager that the percentage of pre-1999 Extras that participated in that particular battle was less than 0.01% of the total number of pre-1999 Extras. For that reason. I don't believe that naming a battle after a group of people that had such a miniscule percentage of them actually participate is appropriate.

>Or better yet, of the participants, what percentage did the pre-99
>Extras make?

I don't know that, either. Are you willing to share the answer?

The Product Review editor is Joe Bottiglieri, AA1GW. ARRL tries to review every major piece of amateur equipment, although it certainly doesn't get all the accessories.

>>The reviewers are contract
>> authors, paid the standard page rates. (Policy is that staff, officers or

"Express Electronics" has been around for a while.

The problem with "export" radios is they are perfectly legal for Hams to buy, and use, so long as it's not on 11m. The only way to reduce the flow of equipment like this from getting into the hands of un-licensed people requires one to provide proof of license before the sale. As of right now there is no such requirement by law. Some Hams believe there should NOT be one either so that those who want a rig can get one, before getting their license, so they can monitor the bands, for example. One solution would be banding the importation, or sale, of any kind of "export" radio. Short of this I don't see much more the FCC can do except chase down the hundreds of large, and small, dealers selling these rigs. I see them for sale, by local CB Radio shops, at many Ham Radio flea markets I go to, and the next table over is somebody else selling "10m" amplifiers.

> However, products they focus exclusively on are illegal CB linears

This is one area where the FCC could make a big difference. There are well known 10m/11m linear amplifier dealers that do business on the Internet. You would figure it would be simple for the FCC to set them up for a "buy", like the DEA does with drug dealers, then bust them. An Internet search engine can track these dealers down at little to no cost to the FCC. There is no question about if the amplifiers are legal to sell or not. The FCC has that area well covered in Part 97. The Detroit FCC office got after the people selling H.F. amplifiers, kits no less, in the tent area at the Dayton Hamvention, so the real question is why don't they bust these guys on the Internet too.

You are correct; I don't remember the question specifically from my Novice exam. I am quite willing to assume that the material that was published in the 4-page study guide was going to appear on the tests. Can you think of any reason that the FCC would have put that material in its syllabus and not asked questions about it? Can you think of any reason that the FCC would ask questions about ohms without asking a question about what an ohm is?

I wasn't talking about everyone, Ed, just about myself. Learning Morse
code was one of the easiest things I have ever done. Two hours for
two nights was all it took for about 4wpm. However, my cousin had to
use cheat sheets and later flunked his first 5wpm exam.

One cannot play a game of checkers with no training or practice either but there is no governmental requirement for training because checkers is not a life and death situation. Learning checkers is like learning Morse code. Learning anything where one can be physically injured is unlike learning Morse code.

My cousin could send and receive Morse code with lookup charts at approximately 4wpm. For receiving, he had the chart entries arranged in a logical manner so he could just follow a flow chart and write down the character.

Well Dick first let me tell you who I am not. I'm not
someone who judges other hams by their code speed.
I'm not someone who requires that everyone share my
interests or have my skill set.

I am someone who goes well out of his way to teach and
demonstrate amateur radio in order to promote the hobby
and help other hams enjoy it more. This to me seems a better
course of action than berating other hams that don't share
my interests or skills. Last year I attended 16 hamfests in
12 different states from Florida to Alaska doing demos,
forums, teaching and speaking about amateur radio.
What did you and your hero do?

It seems to me that poor Fred has his entire self worth tied up in his code. What a shame to have done so little in ones life that all you have to be proud of is an arcane skill, be that ability real or imagined,

I have a question I think you might be able to help me with. Why does someone become a sock puppet for an internet jerk? Is it sort of like those Bozos who hung out with those schoolyard bullies basking in reflected "glory"?

Every so often a new guy like Leland comes up with the mistaken idea of placing restrictions on the wide availability of amateur radio equipment and supplies. These are the folks who suggest it be a crime to own amateur equipment without a license, and who are not thrilled about the fact that Radio Shack sells a line of UHF/VHF amateur equipment right out under the nose of the impressionable public. I suspect they don't like the idea that soldering guns and schematics are openly sold to those without the proper credentials also.

. . .While it is easy, on the surface, to agree with their goal (keeping amateur equipment out of the hands of bootleggers), I feel the attitude that amateur equipment should be treated as some sort of controlled substance is short-sighted and in fact damaging to our service.

. . .I live in a large metropolitan area. We have one full line amateur store in town. There are no other similar stores in the whole state. In the four states which border us, there are 2 more amateur radio stores. THAT�S IT! In 5 states, there are only 3 stores! In the whole country, my guess is that there are less than four dozen stores selling amateur radio equipment, antennas, and supplies! It is as though we were some secret society, bent on concealing our presence from the world.

. . .Not all that many years ago, there were at least 6 electronic stores here in town which sold amateur equipment (not exclusively, but they all had a good selection). Add to that two Heathkit stores, and even the Sears stores sold amateur transceivers for awhile. (Yes, Virginia, right there along with the Craftsman sockets and Silvertone TV sets.) In the same era, Radio Row in NYC was blocks of wall-to-wall storefronts catering to electronics experimenters. Popular Science magazine had a regular column about amateur radio, and occasional construction articles. Every second little town had an amateur radio club. Amateur Radio was a populist, Joe SixPack kind of hobby.

. . .During those years it was easy for a person to get interested in being an amateur, to shop around for the best deal on equipment, and to meet an Elmer. We were visible to the public, and well regarded.

. . .Then somewhere along the line came the magic of 1-800 shopping, amateur radio marketing became streamlined, and radio stores disappeared from Hometown America. With the demise of the local radio store, all the Elmers disappeared into their shacks and newcomers flounder around in fancy four-color ads in back of CQ and QST magazine, trying to decide how to be a ham. Clubs floundered, in part due to the loss of hams around the coffee pot in the back of the local electronics part store.

. . .Rather than continuing to restrict the availability of amateur equipment, as though we were selling assault weapons or recreational pharmaceuticals, I vote for opening up the market. Let�s have radios for sale in the strip malls alongside the video games, Lionel trains, and mountain bikes. And it won�t hurt if a few of us put on our Elmer-suits and lurk around to spot the likely recruits.

When they outlaw ham gear, only outlaws will be hams.

Shhhhhhhhhhh - can't let things like that out in the regular news stream. How could the Black Caucus or any other left wing extremist group have any right to complain if facts like those are brought out? This reality must be hidden and counter attacked immediately or otherwise the truth might be a popular belief, Sharpton, Jackson, and all the others will be out of a job for the next 8 years if it is revealed Bush got the popular vote... and you wouldn't want to see them on welfare would you?

From _The Development of Modern English_ by Stuart Robertson, rev. Frederic G. Cassidy, Prentice-Hall, Inc., 1934, 1938, 1954, Eleventh printing, 1965. [Not exactly "modern" dumbing down.], pp 1-2.

Chapter One -- Introduction: The Nature and Origin of Language.

"Like most words that are often used, the word _language_ has many senses.... The English _language_, the _language_ of mathematics, deaf-mutes' _language_, 'the subtle _language_ of a women's eyes' -- all these legitimate senses differ so much that some of them, at least, must represent special uses, extensions, or generalizations that have grown up in the course of time, presumably from some basic core of meaning..... we may yet note that _language_ is derived from _lingua_, the Latin word for tongue, which in this case correctly emphasizes speech as the basic thing in language.... _Language is the vocal and audible medium of human communication_....

"To say that language is _vocal_ and _audible_ immediately puts aside everything written--.... For writing is a _record_ of language...[the second level]....

"The dots and dashes of the Morse Code are still on a third level, since they are substitititutes for the letters with which we spell out our _records_ of speech; and with them are the gestures of the deaf-mute...."

One of my favorite comments about language involves the difference between a _dialect_ and a _language_. "A _dialect_ is a _language_ without a navy," illustrating the _political_ nature of defining what _lingua_ is "language" and what _lingua_ is "dialect."

And you want to argue whether Morse is a language?

The entire program could be published and the random number generator could be reseeded from the computer clock. The parameters in the actual printed multiple choice exam would be unpredictable. An answer key could be printed out along with the exam.

Let me get this straight...random parameters? If there were ever a solution that would drive test takers to memorize the correct answers, this is it.

The problem is, we don't understand the concept of tests and measurement. Yet we think we can design tests. We know that short answer or essay tests place too much demand on the test administers, so we settle for multiple choice -- easy to administer, quick to grade. And then we get bent out of shape when takers know the correct answer -- either because they memorized or because they could figure it out from the distractors or because they knew the answer.

Right now the only way we know folks are memorizing the question and answer pool is because that's what they are saying. We can surmise that's happening for two additional reasons: 1. the Q&A pool is public information and available (therefore people will take the shortcut), and 2. a great many of the questions and distractors are so convoluted and so specific that the logical method is to memorize.

The only thing most multiple choice tests measure to any great degree of certainty is not the subject matter but rather the ability to take a test.

In <941fil$qi4$1@sshuraac-i-1.production.compuserve.com> Vincent Biancomano <103520.355@CompuServe.COM> writes:

>>Uh huh, well, how about sending me copies of your file copies,
>>anyway? I'll even give you a quarter a page to cover your costs.

>As I said Paul, get your info from ARRL. While you're at it, ask
>them of the details of what's gone down the past 10 years
>internally. I wouldn't want to skew the information
>unintentionally, or just in case I've missed the fine details,
>i.e., some nuances.

Dave Sumner, Executive VP at the ARRL, says the following:

Hello Paul,

We have lots of material in lots of file cabinets, but staff time is very limited and we're not in a position either to conduct or to permit searches of files for private purposes.

73,
David Sumner, K1ZZ
Executive Vice President, ARRL

So, to recap, we have the following situation:

Vince points to an 18-year correspondence trail, including letters to the League and newsletters to Hudson Division members during his campaigns for Director, that support his positions. Vince says that reading all of this would give a detailed exposition of his views.

Vince is asked for copies of all of this documentation, even offered 25 cents a page for reproduction. Vince refuses, stating (paradoxically) that his revealing such evidence would made it LESS CREDIBLE (as if it's more credible unrevealed?) because he could be accused of doctoring it. This is reminiscent of Vince's refusing to prove Fred Maia's "women and children" quote unless Fred denies it in writing (Fred says that he doesn't recall).

To paraphrase Dave Sumner, because of practical staff time and other understandable constraints, the League cannot retrieve arbitrary internal documents from years in the past on demand for private purposes (I, of course, suspected that, but did want to get a definitive answer for the purpose of this discussion).

So, Vince says get the documents from the ARRL. The ARRL says (in effect) get them from Vince. If you can falsify an 18 year correspondence trail (properly forging it in detail, including adding all of the realistic touches, such as historical accuracy and document aging), you *deserve* to have it accepted as authentic (just as if you can memorize a 500-question VE exam pool, you *deserve* to have a license). I suspect that if it existed, it would be a recap of all of the points that you've offered, and we've disagreed with over the years. I also suspect that much of it does not exist in either Vince's or the League's hands (and for no other reason than such documentation either gets lost or is routinely disposed of after some period of time).

Oh, and by the way, which of your opponents for Hudson Division Director made that quote which you paraphrased as:

"you know, there's no reason for Amateur Radio to be a technical hobby today, simply because there's no jobs for engineers. You know, my father was a plumber, and advised me to do the same. Looking back on it, you know, he was right."

?

The individual who defeated you four times says that his father was not a plumber, and nothing resembling such a statement was made by him..

Perhaps exchanges with you in the past along these lines had motivated Gary Coffman, KE4ZV, to say the following:

"Vince, you have provided essentially no documentation, merely a couple of one-liner out of context quotes that you repeat over and over, and a few paraphrased references to obscure documents you *claim* exist but refuse to properly identify or furnish. You are indeed not engaged in debate. You are simply spewing the same old propaganda, depending on repetition in classic Big Lie fashion, in an attempt to win your point. We aren't fooled."

Jerry Altzman, KE3ML, put it a bit more succinctly (and amusingly);

"I have the names of KNOWN TOUGHER-TEST-SUPPORTERS infiltrating our highest levels of government, academia, industry..."

More good quotes like this can be seen at:

http://www.novia.net/~pschleck/vince/quotes.html

But I should let you get back to your work on the Un-Amateur Activities Committee.

Which, clearly, you misunderstand.

> How does the ARRL decide on what is liked or disliked?

By listening to what our members tell us. When we get many compliments and few complaints on an article, it's not hard to infer that the membership liked it! (Actually, every PIC-based article we've published has been well received.)

> >Maybe you need a new set of "others" from which to solicit input. The

> uncomfortable with my opinion. :-)

It's not something that affects my comfort. I'm merely pointing out the errors that you are being led into by the others on whom you are relying. If you choose to continue to get your information from sources that are demonstrably uninformed, it's no skin off me.

> As a non-subscriber to QST, I cannot hope to compete with an
> ARRL staffer who has ready access to the full line of ARRL
> publications.

Yet lacking access to the publications you still draw conclusions about the editorial policies of the publisher.

> I am not critiquing individual QST articles but
> rather expressing an opinion on the attitude in general of the
> ARRL relative to morse code...over the last few decades...and
> the attitude of the general membership of the ARRL relative to
> morse code proficiency being the paramount achievement in
> US amateur radio.

Your opinion of the membership's attitude led you to the conclusion that the ARRL membership would not accept (your word) publication of an article about a computer-based Morse reader. I've shown you that such an article was published (as others have been, BTW) and the membership did not rise up in outrage. Now, if you approach the topic objectively you might consider that if a premise (ARRL members prize manual code skill over nearly anything else) leads to a conclusion (ARRL members wouldn't accept publication of such an article) that is incorrect, it just may be that the premise is flawed. Which it is.

> I readily admit to not knowing the entire scope of amateur
> radio activity as practiced by over a half million licensed US
> radio amateurs.

Yet you are willing to state with certainty what attitudes and opinions are held by that half-million-plus.

> To be fair, you should admit the very same
> thing. Being an ARRL staff member does not give you some
> magic powers to know the entire scope of amateur radio
> activity...or radio activity that is possibly related to amateur
> activity.

Nope, it doesn't. What it does, however, is expose me to many amateurs holding a broad range of opinions about Amateur Radio, the ARRL and related matters. I don't claim to know all of their opinions, but when there is evidence that suggests that a particular view is widely held, I'm willing to go by it. When someone expresses the opinion that a view IS widely held, I simply want to know what evidence led them to that opinion. And when the available evidence shows that conclusions that follow from that opinion are incorrect, I consider the opinion to be unjustified.

Jon

I guess the sarcastic nature did not come through as I had hoped.
If God were such a boon to the liberal agenda, why are 99% of them trying to remove Him from of everything? No prayer in schools, no 10 commandments, abortion runs rampant, etc. I really don't think God wants His name attached to such blasphemous activity!

And why should that be a mistake? You have to provide proof of insurance to get plates for a vehicle, provide a prescription from your doctor at the drug store for powerful drugs, a photo ID (normally a driver's license) to pass a check, same thing with trying to buy booze, or get a drink at a bar, cops wants to see your driver's license when you get pulled over etc. The list goes on and on. There are many things we are required to provide proof that we are who we say we are, and that we can do something, or we are authorized to be where we are. Normally we just don't think about all the cases. Asking to see your FCC license is not a big deal.

So when you get pulled over by a cop, and he notices you are getting public service calls over your mobile rig, and tells you that you can't have a scanner in your vehicle. You going to tell him you are a Ham, then refuse to show you license when he asks to see it, and then tell him to go bugger off because you don't have to?

> These are the folks who
> suggest it be a crime to own amateur equipment without a
> license, and who are not thrilled about the fact that

> under the nose of the impressionable public.

I have been to plenty of Hamfests where the policy is NOT to give a winner of the door prizes a Ham Radio TX of any kind UNLESS they have a license. Instead they give them cash in the case they are unlicensed. So in a way it's already being done. I bet you never even thought about it, even bothered to notice.

If you are of average skills I can teach you to take off and land an airplane safely, as the sole occupant in about 10 hours.

I suspect I would spend more time teaching you Morse code to the level I could "solo" you on the band. This assumes 5 WPM as the solo level.

How long it would take to teach yourself is another matter. However I once worked with a guy who was an avid simulator pilot that could probably have soloed in 4 hours. he claimed several thousand hours on his Microsoft flight simulator.

Sigh. The question is really "Is there a problem which is bad enough
that we would insist on the expense and the enforcement of checking
for a license before the sale?"

That's a judgement call.

>> These are the folks who

>bothered to notice.

Personally, I don't think it's that big a problem.

The real problem is that the FCC isn't enforcing its own laws very well. Laws against unlicensed operation exist. Maybe the FCC would consider licensing something like an Official Radio Monitor (Kind of like the ARRL OO, but with some sort of legal standing in a court of law) who could be called at a moment's notice to DF a signal they can't afford to track down.

Then the real problem would disappear.

Leland, I respect your position, but I can't help thinking that you're fighting the symptom, not the disease.

73,

Jake Brodsky, AB3A mailto:frussle@erols.com

How could that be? The answers would not be available until the
exam was generated. The examinee would see the answers for the
first time when he/she takes the exam under the watchful eyes
of the VEs. Every exam would be different.

>Of course it does, same as it makes me better at that skill than one who has

>never figured an exposure problem.

"Better?!?" I thought the Jelly Jermiad bespoke of "superiority"?!?

Figuring exposure: I did that as an teenager, could F-stop and
shutter speed under stated ASA film ratings as good as pros.
I did radiation exposure problems in late twenties, am still
alive. I did field strengths for SID antennas in my forties and
was able to measure them accurately...compared standard
antennas to new development antennas on a range at the
same age. All of them without needing CW skill. All of them
without having to attend formal classes having grades and
neat little certificates of "graduation."

>Ed, the demonization of someone being superior is a product of the feel good
>generation. Soccer games for kids that do not keep score ,so no one feels
>bad. Gradeless classes for the same reason.

Heh heh heh...the ultra-conservative wanting SCORES,
brag-rights indicators of "superiority" to others. No one
allowed to "play" just for the love of playing?!?

Heh, my cousin Leif in Sweden played soccer (with scores
and international football rules) until he was 55. Did he
do that for showing his "superiority" or did he just like to
play the game, win or lose?

>One could go on forever listing the esteem building exercises.

Tell everyone more about your wonderfulness, Jelly. I think it
would be an interesting display of encouraging newcomers
to take on a hobby, to show "incentive" in order to be as good
as you.

>The reason you see such vitriolic response, is for many this is the first
>time in their life they have been told they don't measure up.

"Measure up" to WHAT, old-timer? :-)

Standards and practices of the 1930s?!? WHY?!? :-)

Just who, or which divinity, has decreed that morse code skill is
the epitome of amateur radio excellence...that all "must" have
that skill to be "accepted" by the Superior Beings?

This newsgroup was created primarily to be a forum to discuss
the code test for amateur radio license examinations. From
day one it was obvious that the self-styled "superior" ones were
personally attacking those that did not want the code test.

>Do you not
>sense the "it's my God given right to be equal in all respects regardless of
>effort" attitude in the responses?

I sense, detect, and almost blinded by Day-Glo letters of "CW skill is superior to all other forms of endeavor in anything and therefore [Jelly] is superior to others who cannot be as godlike as [Jelly]."

The FCC determines what constitutes essential requirements for a US amateur radio license. Not the "amateur community." Not the ARRL. Not what is currently done in amateur radio. Not the traditions and urban myths of now-ancient history in amateur radio. Licensing is part of the FCC's task of regulating US civil radio. The license test isn't an academic test of any kind. Never was.

The FCC has stated in 1990 and in 1999 that it does not consider a morse code test as relevant to amateur radio licensing in order to regulate amateur radio. It stated that the FCC must continue to do so because of existing treaty-cooperative ITU-R standards.

As far as I've been able to see over a three year period, none of the no-code-test advocates has proposed an outright banning of morse code USE in amateur radio. The only advocacy is the elimination of the morse code test itself.

If that morse code test is considered necessary to prove some kind of moral-ethical-mental superiority...as often stated by those who have passed such tests...then the only conclusion to be drawn is that their moral-ethical-mental standards are questionable. It seems to fall to the obvious -

"We had to take the test so all the newcomers have to take it."

Selfish emotionalism is not a good reason for regulations.

>Fred, oops. You were supposed to be better than everyone else.

Brian, a correction...Jelly is superior, not just better.

I find his admission of a "failure" to be shocking. The era of 7-pin glass base beam power pentodes ended over two decades ago with components growing steadily smaller...while the egos of those who said they "dealt" with tubes grew steadily larger. :-)

My wife is older than Jelly and she does excellent fine-detail cross-stitching. Her headband magnifier helps. I've been under treatment for glaucoma for a quarter century and can still see very well close-up. No problem with unsteady hands here...but that may be due to constantly working with electronics, adjusting and improvising. No amount of ego can move electrons or generate RF, it takes application and learning-with-the-components, learning about components.

The pin-to-pin spacing of dual-inline IC packages is about the same as the pin-to-pin spacing of a 7-pin miniature glass tube. The 1949-operational AN/PRC-6 military handy-talky had 12 subminiature glass tubes whose pin-to-pin spacing was half that of the single 7-pin tube of the PRC-6's PA. That is 52 years ago. I wonder where all these "superior" hams have been that whine and complain about not being able to "deal" with 6AQ5s?

Maybe all of those whining, crybaby "superior" oldsters can only "deal" with power triodes like the 833 having only four large cap-contacts and no base, grid and plate caps being around 3 to 4 inches apart? Gonzo sizes to fit gonzo egos?
:-)

How about a 5 question test for General.

1. State in 300 words or more why you want to be a ham.

2. Describe the procedure for calculating, adjusting, and connecting a 15 meter dipole cut for the center of the phone band.

3. Explain the difference, if any, between an AC ground and a RF ground. Elaborate as to how each contributes or degrades operator and property safety.

4. Explain the procedures to make a contact on a non voice mode of your choosing.

5. Your neighbor calls and says you are interfering with his television, you are at a loss as to how to solve it. What do you do next?

Now even if they memorize the answers they at least have some practical knowledge.

Yes, he is. That is why this country outlaws all abortions and all contraception. That is why we have forgiven our debtors. That is why there are so many new Catholic schools and churches. That is why prayer in public schools is not only allowed but encouraged. That is why education is taught from a high moral perspective and history is interpreted as the fight between good and evil. That is why we have our ultimate political example of Catholic morality, Senator Kennedy.

Got it?

Good questions but there are a couple of problems - too subjective
and too time consuming.

For those who get their shorts all knotted up about CB lingo on the ham
bands, here is an excerpt from a book written 60 years ago by Clinton
DeSoto.

"Among radio amateurs there is a genuine brotherhood and informal
camaraderie. Everyone is called by his "handle" -- his first name
or nickname. The president of the Chicago Stock Exchange and the
mechanic in a Birmingham garage are just "Paul" and "Joe" when
they meet on the air."

As I alluded to in my previous message, If the FCC monitoring
facilities are taxed, why not certify certain amateur radio stations
as a legal observer who can give expert testimony?  Then one would
only have to alert these observers to the problem, they'll track the
bugger down and the FCC would decide how to prosecute the offender.

This is certainly less costly than assuming the whole enforcement
burden, and hopefully this could enable the FCC to use its funding
more wisely.

Exactly. We don't need more big-government rules! Enforce the
ones we have.

> Maybe the FCC would consider licensing something like an Official
> Radio Monitor (Kind of like the ARRL OO, but with some sort of
> legal standing in a court of law)......

Groan.....

We could have tin badges and blue jump-suits and all other sorts of
cop-wannabe paraphenalia.

On second though, fergit it! I don't think it is the function of
hams to be hall-monitors for CBers and freebanders.

A lot less time consuming that having to learn code. My problem with the FCC exams is they do not test the practical aspect of ham radio.

If we are remove the CW requirement, we should at least insure the new amateur has a practical understanding of operations. We might instead make it a requirement that the new amateurs station be examined by a volunteer group similar to the VE groups and signed off for operation. I worry that some of the newbies can jump from zero to 1.5 KW with no practical knowledge of the consequences. I go back to the flying without lessons. In this case serious jeopardy awaits those that lack instruction in safety and what could happen when you reach inside that new linear with the pair of 3-500Z's.

Before you ask what CW has to do with safety, in the process of learning from an Elmer or a club these issues are brought up by an experienced amateur. With the ability to simply answer a few questions on a written, one could conceivably be an extra and have never even seen a radio. No one on one contact with a ham is necessary.

I'm sorry; poor choice of words on my part. QST doesn't run the Review
until we have all of the accessories we want to include. (Filters, tuners,
etc.)

What doesn't always get reviewed is every station accessory available, ie
wall clock, keyer, etc.

The QST column "Short Takes" does include a lot of the lower-end products, though; it was added sometime last year to let ARRL take a closer look at more equipment.

In case a few members missed it, the entire QST Product Reviews from 1980 onward are available at the ARRL members pages at http://www.arrl.org/members-only. The expanded test reports are available there also. As each issue is sent to the printer, the Product Reviews are put up there, giving members a faster look at them.

Do you believe that the following represent practical knowledge?

T4B07 @N4C06 (B)
If an SWR reading at the low frequency end of an amateur band is 2.5:1, increasing to 5:1 at the high frequency end of the same band, what does this tell you about your 1/2-wavelength dipole antenna?
A. The antenna is broadbanded
B. The antenna is too long for operation on the band
C. The antenna is too short for operation on the band
D. The antenna is just right for operation on the band

T4B08 @N4C07 (C)
If an SWR reading at the low frequency end of an amateur band is 5:1, decreasing to 2.5:1 at the high frequency end of the same band, what does this tell you about your 1/2-wavelength dipole antenna?
A. The antenna is broadbanded
B. The antenna is too long for operation on the band
C. The antenna is too short for operation on the band
D. The antenna is just right for operation on the band

T4C01 @T4B01 (B)
How is a voltmeter usually connected to a circuit under test?
A. In series with the circuit
B. In parallel with the circuit
C. In quadrature with the circuit
D. In phase with the circuit

T4C02 @T4B02 (A)
How is an ammeter usually connected to a circuit under test?
A. In series with the circuit
B. In parallel with the circuit
C. In quadrature with the circuit
D. In phase with the circuit

T4D01 @N4D01 (C)
What is meant by receiver overload?
A. Too much voltage from the power supply
B. Too much current from the power supply
C. Interference caused by strong signals from a nearby source
D. Interference caused by turning the volume up too high

T4D02 @N4D02 (A)
What is meant by harmonic radiation?
A. Unwanted signals at frequencies that are multiples of the fundamental (chosen) frequency
B. Unwanted signals that are combined with a 60-Hz hum

C. Unwanted signals caused by sympathetic vibrations from a nearby transmitter
D. Signals that cause skip propagation to occur

T4D03 @N4D06 (B)
What type of filter might be connected to an amateur HF transmitter to cut down on harmonic radiation?
A. A key-click filter
B. A low-pass filter
C. A high-pass filter
D. A CW filter

T4D04 @N4D08 (C)
If your neighbor reports television interference whenever you are transmitting from your amateur station, no matter what frequency band you use, what is probably the cause of the interference?
A. Too little transmitter harmonic suppression
B. Receiver VR tube discharge
C. Receiver overload
D. Incorrect antenna length

T4D05 @N4D09 (D)
If your neighbor reports television interference on one or two channels only when you are transmitting on the 15-meter band, what is probably the cause of the interference?
A. Too much low-pass filtering on the transmitter
B. De-ionization of the ionosphere near your neighbor's TV antenna
C. TV receiver front-end overload
D. Harmonic radiation from your transmitter

T4D06 @N4D10 (B)
What type of filter should be connected to a TV receiver as the first step in trying to prevent RF overload from an amateur HF station transmission?
A. Low-pass
B. High-pass
C. Band pass
D. Notch

T4D07 @N4D11 (B)
What first step should be taken at a cable TV receiver when trying to prevent RF overload from an amateur HF station transmission?
A. Install a low-pass filter in the cable system transmission line
B. Tighten all connectors and inspect the cable system transmission line
C. Make sure the center conductor of the cable system transmission line is well grounded
D. Install a ceramic filter in the cable system transmission line

T4D08 @N4D12 (C)
What effect might a break in a cable television transmission line have on amateur communications?
A. Cable lines are shielded and a break cannot affect amateur

communications
B. Harmonic radiation from the TV receiver may cause the amateur transmitter to transmit off-frequency
C. TV interference may result when the amateur station is transmitting, or interference may occur to the amateur receiver
D. The broken cable may pick up very high voltages when the amateur station is transmitting

T4D09 @N4D13 (A)
If you are told that your amateur station is causing television interference, what should you do?
A. First make sure that your station is operating properly, and that it does not cause interference to your own television
B. Immediately turn off your transmitter and contact the nearest FCC office for assistance
C. Connect a high-pass filter to the transmitter output and a low-pass filter to the antenna-input terminals of the television
D. Continue operating normally, because you have no reason to worry about the interference

T4D10 @N4D14 (C)
If harmonic radiation from your transmitter is causing interference to television receivers in your neighborhood, who is responsible for taking care of the interference?
A. The owners of the television receivers are responsible
B. Both you and the owners of the television receivers share the responsibility
C. You alone are responsible, since your transmitter is causing the problem
D. The FCC must decide if you or the owners of the television receivers are responsible

T4D11 @N4D15 (D)
If signals from your transmitter are causing front-end overload in your neighbor's television receiver, who is responsible for taking care of the interference?
A. You alone are responsible, since your transmitter is causing the problem
B. Both you and the owner of the television receiver share the responsibility
C. The FCC must decide if you or the owner of the television receiver are responsible
D. The owner of the television receiver is responsible

T5A01 @N5A03 (B)
*Modified Q,A-D
If a dial marked in kilohertz shows a reading of 28450 kHz, what would it show if it were marked in hertz?
A. 284,500 Hz
B. 28,450,000 Hz
C. 284,500,000 Hz
D. 284,500,000,000 Hz

T5A02 @N5A05 (C)
If an ammeter marked in amperes is used to measure a 3000-milliampere current, what reading would it show?
A. 0.003 amperes
B. 0.3 amperes
C. 3 amperes
D. 3,000,000 amperes

T5A03 @N5A09 (C)
How many hertz are in a kilohertz?
A. 10
B. 100
C. 1000
D. 1,000,000

T5A04 @N5B02 (C)
What is the basic unit of electric current?
A. The volt
B. The watt
C. The ampere
D. The ohm

T5A05 @N5B03 (D)
Which instrument would you use to measure electric current?
A. An ohmmeter
B. A wavemeter
C. A voltmeter
D. An ammeter

T5A06 @N5B08 (B)
Which instrument would you use to measure electric potential or electromotive force?
A. An ammeter
B. A voltmeter
C. A wavemeter
D. An ohmmeter

T5A07 @N5B05 (A)
What is the basic unit of electromotive force (EMF)?
A. The volt
B. The watt
C. The ampere
D. The ohm

T5A08 @N5B12 (C)
What are three good electrical conductors?
A. Copper, gold, mica
B. Gold, silver, wood
C. Gold, silver, aluminum
D. Copper, aluminum, paper

T5A09 @N5B13 (A)
What are four good electrical insulators?

A. Glass, air, plastic, porcelain
B. Glass, wood, copper, porcelain
C. Paper, glass, air, aluminum
D. Plastic, rubber, wood, carbon

T5A10 @N5C09 (C)
Which electrical circuit can have no current?
A. A closed circuit
B. A short circuit
C. An open circuit
D. A complete circuit

T5A11 @N5C11 (D)
Which electrical circuit draws too much current?
A. An open circuit
B. A dead circuit
C. A closed circuit
D. A short circuit

This may work since the bill was passed allowing enforcement of the CB Radio Part 95 rules by local LEOs. Hams could volunteer to help in that area as part of our public service function. Now the question is, how many would even bother to do so?

Sure you can...but you have to HAVE a license to play. So WHAT would YOU know about it?

> Tell everyone more about your wonderfulness, Jelly.

Seems I don't remember Fred addressing you as anything but Len, ergo why the name calling, Lennie?

Again, you prove me right. Thank you.

> "Measure up" to WHAT, old-timer?

Regardless of what the "WHAT" is, YOU don't make it anyway.

> This newsgroup was created primarily to be a forum to discuss
> the code test for amateur radio license examinations.

And like almost all things, it has evolved. You should try it.

> I sense, detect, and almost blinded by Day-Glo letters of "CW skill
> is superior to all other forms of endeavor in anything and therefore
> [Jelly] is superior to others who cannot be as godlike as [Jelly]."

More name calling which Lennie has repeatedly denied doing.

When will this lying creep realize he's an idiot who's number has been had?

> The FCC has stated in 1990 and in 1999 that it does not consider
> a morse code test as relevant to amateur radio licensing in order
> to regulate amateur radio. It stated that the FCC must continue to
> do so because of existing treaty-cooperative ITU-R standards.

Yet YOU keep assailing AMATEURS for it's retention. Here you state the FCC has clearly stated that international treaty is to "blame". So which is it, Lennie?

>It seems to fall to the obvious -

What falls to the obvious is that you manipulate "facts" to justify the rant of the hour.

> "We had to take the test so all the newcomers have to take it."

Not true, and you have been invited in. You spurn the offers based on YOUR alleged moral superiority..."Why should >>I<< allow myself to associate with such heathens...?!?!?"

> Selfish emotionalism is not a good reason for regulations.

Or a good reason for revoking regulations, either.

All it takes is money. The Commish' is stupid not to do it while there are still agents left who have the capability and the desire to do it. The old-timers like me are all gone (with two notable exceptions nationwide) and our immediate proteges who at least served a few years while we were around are getting up to retirement time pretty soon.

There is no "new crop".

All it takes is money and a committment from above.

The new chairman-designate has ZIPPO understanding and support of what the real mission of the agency should be. He proves it in his public pronouncements.

>Laws against unlicensed operation exist. Maybe the FCC would
>consider licensing something like an Official Radio Monitor (Kind of
>like the ARRL OO, but with some sort of legal standing in a court of
>law) who could be called at a moment's notice to DF a signal they
>can't afford to track down.

We used to have them -- they were called "FCC engineers". I got called out too many times to count in the "good old days".

The question came up about "volunteer agents" - similar to police reserves - when the Amateur Auxiliary was formed. Both the enforcement and the legal folks came to the same conclusion that there are specific training and legal qualifiction problems in that sort of arrangement on the Federal level, and that's why the Amateur Auxiliary was crafted the way it is.

The problem is getting the legal folks both inside the agency and outside (the Justice Department) to move on what we amateurs consider a "major problem" but what, in the law enforcement community, is really small potatoes - or so I've been told by more than one U S Attorney.

The term "troll" usually has some pretty negative implications. Do you believe that this post was intended only to goad people into arguing with each other for the amusement of the poster?

I believe that Hans posted it because it was a neat piece of information that has relevance that may just stop one tiny bit of the arguing we do here.

Hans, please find another tidbit to use to try to convince people not to argue over insignificant details like 11-meter ops using the term "handle" instead of name. :-)

Read it again, Hans. Key in on the phrases below. 73, Brian

He finds amateur radio "the means of communications with others on equal terms, of finding friendship, adventure and prestige while seated at one's own fireside," according to Dr Raymond V. Bowers. "In picking his human contacts out of the air, theamateur is not seen by them.... He is not known by the company he keeps nor by the clothes he wears, but by the signal he emits.

-ON EQUAL TERMS

-KNOWN BY THE SIGNAL HE EMITS

It stands for the maintenance of fraternalism and a high standard of conduct.

-HIGH STANDARD OF CONDUCT

In early days amateur stations used code alone in their transmissions. These days they use both voice, or 'phone, and code, or c.w. (continuous wave) telegraphy, theproportion being about one third 'phone and two thirds c.w. Actually, all amateurs mustbe able to understand the radio code. A 'phone transmitter, involving microphone, speech amplifier and modulator, is more complex and expensive than one for c.w. alone which needs only a telegraph key (no transmitter?). There is a traditional rivalry (not warfare) between confirmed addicts of the two methods, a rivalry comparable to that between sailing-boat and power-boat owners or between sailplane and airplane pilots.

To be considered a "good ham" is just about the highest mark of honor there is.

Among radio amateurs there is a genuine brotherhood and informal camaraderie

Fraternalism ... good fellowship ... ingenuity ... public service ...

That's what amateur radio is like.

Ed, who tought Orville Wright to fly? Who taught Sammy Morse the code?

Either can be self-taught. Today it just depends on the gubmn't
regulations.

True enough, but one caveat -- those self-taught hams might not send machine-perfect code. :-)

> > I've talked to a few people on CW who didn't know the Morse code...

I have too, Aaron, on purpose. We set up a little cross-band QSO where I worked a bunch of new VHF only hams by transmitting Morse code on 40 meters and listening on 2 meters. A local op manually retransmitted my 40 meter signal, using a 40 meter receiver and an HT.

The hams, most of which were not code proficient, only had to learn how to recognize their call on CW and make the QSO with me. I sent them a signal report, which naturally was 59. :-) There was one old timer who just wanted in on the fun and one Tech+ who didn't have CW equipment who had never made a CW QSO.

It didn't change the world, mind you, but we all had a good time, tried something new and learned that CW is a real mode in ham radio.

Oh, and none of them complained about my timing. I had to use a J-38 to slow down to 5 wpm non-Farnsworth.

The Novice License and the original Technician License both got their
start at the same time on July 1951. The Tech Plus (5 wpm) and the No-Code Tech came later. The Novice and Tech Plus were eliminated
recently in the dumb restructuring program. While the Novic License
was not producing many new Novices, let us not discount it as an entry
to youths who prefered to start becoming real HF Hams...Or haven't you
noticed.
>

The FCC makes its decisions based on the bragging and complaining of
Hams and those who lobby for them (like the ARRL)...unfortunately not
always on common sense or with an eye to the survival of ham radio or
its educational benefits.

> >They informed us that there was

wasn't "supposed" to
> add more questions, it did add more questions. I am surprised you
didn't know
> that.

It did add more questions to Novice and Tech Exams and was supposed to add more questions to other exams as they came up for being updated...but sadly the new restructured exams do not contain much RF hazard content nor are the tables and graphs that are used as aides to answering RF hazard questions given to applicants for the new exams. I'm surprised that YOU didn't know THAT!

The basis and purpose (as written in Part 97) of ham radio has often been cited by me. It is a general goal for all hams. The exaqms are used as incentives for the applicants to begion to prepare to generally meet those goals.

> > I dunno what our Ham leaders motives are for sure. Can it be that

Not red tape...Just reality....It woyld add real value to Ham tickets anmd make Ham Radio the worthwhile hobby that it once was.

Is it because they don't trust VEs?....or is it because they don't trust themselves to propose any solutions that might make ham radio compatible with modern computer science and technology???

> >At least some of the real expert hams

I disagree. What youy say can be true for individuals BUT it can
never apply to HAMS AS A GROUP unless it is part of the Ham licensing
structure.

> > I am the first to admit that all Hams are not Hams
> >for the same reasons or with the same motivations.
>
> You may admit it, but you are seeking to require that everyone in ham
radio
> follow the path and motivation that is right for you...

Nope...All Hams need not get to be Extra Class or to obtain specialist
technocal endorsements.
Lots of kids play baseball just for fun. Most sand lot players may
never get to be professional baseball players...BUT the dream is there
among ever kid when he or she starts to play...maybe I'll be good
enough to grow up to be a PRO. In the same manner Ham Radio no longer
offers a gateway to any real professionalism. This was not true in the
30s and 40s when a ham ticket was an early step toward getting a
commercial radio operator license. The commercial license could get
you a job as a broadcasting engineer or a ship board radio operator.
You had learned Mortse code as a ham...and you had learned how to
adjust and neutralize high power RF transmitting vacuum triodes. Both
of these skills mean nothing today as far as commercial values go...BUT
in order to attract new techies the FCC Ham licenses must replace these
practices and skills with the digital and networking skills now valued
commercially. If this does not happen...no self respecting techie can
be motivated to sopend any time as a ham.

> > Nor do all Hams care to get compulsively involved with education,

And if it is
> tied in to priveleges, you have created a structure where only a
handful of
> hams will have all of those priveleges.

I Disagree. The fact that the structiure is there would be just like
the fact that there is amateur, semi-pro and pro baseball. Without any

pro baseball, sand-lot baseball would cease to attract as many
youngsters as it does.

> >Viva la difference. IMHO this means that three classes of license
can
> > never fit all!
>
> 300 classes of license can never fit all, by your "logic."

Nope...I'll settle for 30 classes.

>
> Exactly, and those are the ones who could take and pass your elite
exams, Bob,
> but they know they don't need to.

Those are not the only ones. We have seen many hams of the past and
present who could pass the higher level exams due to their own self-study and practical experience.

> >BUT Ham Radio must also be a sequentially challenging hobby

> >that can be applied by Hams to advance their state of the art.
>
> Yes, it should, and those >1000 questions in the question pool should
be
> changed to reflect just that.

What 1000 questions? 35+35+50= 120 multiple choice questions to make
Extra....from a fixed pool of 1000 or so and only 75% needed to
pass...less if you guess the rest by the laws of probability.
Heck a common hacker needs to be able to handle more knowledge than
that.

> >These widely different needs are in conflict and can only be solved
by
> >a more complex and divergent licensing structure.

>
> How can such needs be in conflict?

The conflict exists between those affluent people who seek Ham Radio as
a fun hobby...and the lesws affluent masses who will only become hams
if ham radio can offer a possible gateway to a vocation or profession.

> That statement is nothing more than emotive
> words strung together. If there is such a technical conflict, adding
a more
> complex licensing structure will not accomplish anything.

AND WHY NOT???

> >BASIS and PURPOSE that can be relied upon to maintain enough clout to

I disagree.

> Perhaps it would be helpful if you directed your energy towards
something that
> the FCC will not shoot down in flames.

The Hams themselves and not the FCC may be burning their own britches
by not understanding the only real surviving purpose that ham radio can
offer.

> 73,
> Ed Hare, W1RFI

73,
I recently returned from vacationing in Southern California.
Bob Wex w2ilp (I Like Pasadena)

I invented the Internet.

--Al Gore--

I was born 35 years too soon. If I still
had the patents on my inventions, Bill Gates
would have to stand aside for me.
--Al Gross (inventor of the walkie-talkie, pager
and cordless telephone [silent key])--

>applicant must demonstrate proficiency in Morse code before being allowed to
>try the mode on HF. People would learn the mode, or write some really cool
>software, before trying it, would they not?

Ed:

You couldn't be wider of the mark. Morse/CW is the only mode which,
in order to be effectively employed, requires the user to learn and
master a physical skill which exceeds the learning curve and

committment level demanded of the other modes. Any person who can read an instruction manual can get a multi-mode TNC up and running -- that's exactly how I did it. If they read a bit more, they will be able to exploit it more fully, as I have. However, the Morse code is different. If I hadn't put in a considerable amount of time and effort to learn it properly, and had I not spent more time practicing it regularly, I would not have achieved what I call "working proficiency" in that mode. And, in spite of this working proficiency, I am still far from what I'd call an "expert." I shall probably never attain that status -- but I could hold my own handling traffic at what I consider to be a reasonable speed, 18 - 22 WPM.

Your argument that the other modes require equal testing status doesn't hold water, since using them doesn't require the user to be able to employ the same kind of conditioned response to external stimulation that is the essence of Morse/CW operation. All it requires is that they be able to see or hear the output of their transceiver through whatever interface is required (speaker, video monitor, LCD display, etc.)

BTW that Kenwood IC-R3 comm receiver has me hot and bothered! Thank Steve Ford for me, for an excellent review! It just may be the basis for my purchase of that rig!

73 de Larry, K3LT

Close to none, 'cept maybe some cop wannabes. The misbehavior of the CBers and
freebanders is an FCC enforcement issue which has no impact one way or another
on ham radio. Fact is they don't have any real impact on anything which is why
they're on the low end of the FCC's list of priorities.
>
How 'bout we just mind our own business and stick to ham radio?

Why would they? I heard that you are the op behind W1AW's sterile code.

BTW, when you took the 13 and 20wpm exams in front of the FCC examiner,
did you dazzle him with your coconut boat swing?

Or did you send it by the book?

Certainly they learned by listening to the ARRL "Now Your Talking" 5wpm
code tape and W1AW on the air.

Ed, this wouldn't be a fair test. no-coders aren't smart enough to build things, least of all their code speed.

Dr Commie, when 3.5 out of 4 networks are liberal, it really is a
conspiracy.  The silent conservative majority could really give a
damn and don't mind spending a little bit of tax money to keep you guys
quiet, but we're just tired of the incessant whining.

Well, as A liberal, more a libertarian or independent, I think you've
got it wrong. All liberals do-not bow when Al Sharpton let's a fart or
were happy about Senor Clinton's little extra marital affair.
What the issue is and YOU conservatives distort it for your own agenda,
is Christain faith, i.e. the Bible is NOT the religion of all Americans.
We have the right of worship and the right NOT TO.
I haven't seen any church closings lately or the FCC putting any of
those fire and brimstone shortwave pocket picking preachers off the air.
Quite the contrary.
 As for abortion.. I'm opposed to it, but not because of a religious
doctrine. Basically I say, why is it murder to strangle an infant after
birth, but perfectly OK to crush its skull, inside the womb?
Seems bizarre doesn't it?
And why do abortions take place? Because somebody wasn't being
reponsible with sex!!
Now, I'm a liberal ? Do I sound like one ?
Well, I think Bubba Bush will be the worst president we've had in 40
years.. but I could be wrong.

Ya know ED, I must've of read 60 of your posts tonight in various
threads and you're a living example of the Leagues restructuring proposal.
You won't promote anything that will improve ham radio and neither will
your employer!

ARRL policy makes me want to vomit.

This is why I am a proponent of one amateur radio license, simply called "Amateur Radio License." Do as much or as little with it as you like.

You can brag about an HPM 35wpm certificate on the wall if you want.

Or you can write code for the hottest new amateur digital mode.

Or you can help scouts get a radio merit badge...

 You're so right! I recall hams using handle before CB was popular.
In fact that term was stolen from ham lingo.
Apparently some of the non-old timers, who were not around in the 1960s,
aren't aware Handle was in common useage.

I did hear somebody say 10-4 the other day on 40, and quite frankly
thats not from CB either.. a stolen product. The COPS have this as a
part of their 10- code.. I am told.. and have had for decades.

Personal Hygiene tip:
Read your QST with gloves on so the bullshit doesn't run down your arms.
Especially the League policy section.

You got it right. I'm sure your just trying to be nice. But the basic
fact is CB stole most, if not all, of their proceedures and pro-words
from either Ham, public service, or commercial service radio services.

Dan/W4NTI

I'm willing to share that Riley has commented on the disproportionate
number of "advanced" hams that get in to regulatory trouble. I don't
know why thy're so unfamiliar with the rules, so don't ask me.

So when I hear of ham misbehavior, its not a stretch to imagine an Extra
doing it.

I have no problem paying a fee.... but i was suprised tonight to learn that
i had to
pay the $10 fee for EACH exam i took. I upgraded to general, and had
intentions
of attempting the extra class exam.... but when i found out it would cost me
an
additional $10 i figured i'd wait until next month when i could be
reasonably sure
that i'd pass with ease.

It was obvious at the time that the CBers got it from us. Just
as they got their mutilated "10" codes from the police community.

The "country" and "good buddy" lingo came from an individual in
the Ozarks who was on the air some 20+ hours a day in the late
60s and actually talked like that as a regular thing. We used to
hear him very plainly at the monitoring stations in California.

The VEC fee is a session fee which means you can take as many exams as you
like at a single examination session for one $10 fee.  If a VE is charging
the $10 fee per element at the same exam session, he needs to re-read his VE
manual.

>
>I suspect I would spend more time teaching you Morse code to the level I
>could "solo" you on the band. This assumes 5 WPM as the solo level.

These two examples are logically incongruent. There is no
need for flying skills in radio operation, any radio service.
To be legal, one has to have an amateur radio license in
order to transmit RF in the amateur radio bands...but the
necessity to "solo" for an amateur radio license in not a
federal requirement.

>How long it would take to teach yourself is another matter. However I once
>worked with a guy who was an avid simulator pilot that could probably have
>soloed in 4 hours. he claimed several thousand hours on his Microsoft flight
>simulator.

The above is both incongruent, illogical, and rather absurd.

As to self-learning radio arts, be they technology or
operating practices, that can be totally self-taught.

In a career of design and development of radio and
electronics, both myself and the vast majority of
career contemporaries were "self-taught" on the changing
state of the radio-electronics arts. There was no time to
attend "formal schooling" or get "accreditation" through
nice little paper certificates with grade points to attest to
"qualified new skills." Myself and the vast majority of my
career contemporaties already had formal schooling.
There were hardly any instructors or courses for each
new radio-electronic art that evolved.

By comparison, the necessary knowledge to get an
amateur license and to begin in the amateur radio

hobby can be entirely self-taught. There is no federal requirement to "solo" in amateur radio under some "instructor" who will "rank a student" based on the "instructor's" opinion.

The amateur radio "solo" requirement is some flight of fancy, or rather a fantasy based on some "instructor's" aberrant self-professed "superiority."

If that is permissable evidently they have changed the rules. When I ran a VE team ('85 thru '93) the rules said one fee for all tests taken at that session. Later it was deemed permissable to charge an additional fee for a retest of a failed element at the same session, but we never did.

There are an infinite number of circumstances that could occur. Suffice to say only that Morse code communications on ham radio is the most easily and widely available method of communications under the most variable of circumstances requiring the least amount of overhead of any amateur radio method - So long as hams are trained so as to be able to use it.

That fact alone is reason enough to require hams to learn to make use of it if the ARS is to be considered as a viable communications auxiliary asset. If it is not, then it is fundamentally changed in its

nature and is well on its way to being nothing more than a hobby on par
with stamp collecting. Clearly there are those posting here who believe
it to be nothing more.

And you can affirm that this in in fact the case???

Seems ham radio has saved
> them from a life of crime. Seems that is a good thing to me. Do you
> disagree?

No, I don't disagree. What I disagree with is your premise that all
persons who so flagrantly violate whatever rule they please at will
should then be assumed to have reformed and become model citizens just
because the FCC gave them an essentially effortless and free ham radio
license. Those types don't reform just because they now have a ham
license in hand. For far too many it just opens another door to
mischief.

Do you condemn anyone who has not lead a perfect life like

Brian, it might be fair to point out that, for a living ---

The Wright brothers operated a bicycle sales/repair shop.

Sam Morse was an itinerant portrait painter.

> as they got their mutilated "10" codes from the police community.

Phil, the etymology of the word "handle" goes back to the
West of America and the American cowboy, used about the
time an itinerant portrait painter in the east got financial help
from a railroad family to develop a new landline
communications mode.

Does the name Broderick Crawford ring a bell?

> The "country" and "good buddy" lingo came from an individual in
> the Ozarks who was on the air some 20+ hours a day in the late
> 60s and actually talked like that as a regular thing. We used to
> hear him very plainly at the monitoring stations in California.

Phil, again you have to go all the way west to Hollywood and
a number of motion pictures and made-for-TV-films on the
patois of CB...or to natives of Oklahoma who grew up to drive
18-wheelers and big rigs cross-country for a living. Oh, yes,
we've heard them very plainly next to I-5 in Southern
California... :-)

I'm wondering what kind of nonsense is being foisted on
everyone. It is saintly and authoritative to refer to a
location as "QTH" but it is evil mutilated robbery to refer
to a location as "10-20." On voice. Why can't folks
simply say "location?"   :-)

Roger that.

Unless the ARRL has changed, it's not quite a session fee. It is insofar as you can take one of every element for one fee. Retakes of failed elements are subject to another fee.

Cecil:

Bill and I agree that the 5 WPM requirement should be eliminated, but for different reasons. He doesn't see the value of *any* code testing whatsoever; I say that a 5 WPM maximum code test is virtually no code testing as it is...therefore, there's no point in maintaining a requirement which will not foster operational proficiency.

If 10,000 armed citizens emerged on the steps of the Capitol, I don't
think they would be very concerned with being arrested.  However,
it would be up to those who might do the "arresting" to decide whether
or not the shooting was going to start.  Arresting people for acting on
their Constitutional rights would be a good way to do that.

US amateur licenses are far from effortless, Dick. To get one requires studying
a 200+ page book and learning from a question pool that is about 20X more
material than the 4 pages I studied to get my license.

I think you already know this.

>stimulation that is the essence of Morse/CW operation.

And that is exactly how I suggest that the mode be tested. As part of the exam, a 5-minute code segment should be sent and the applicant should be required to answer questions about its content, just as is done now.

What would equalize the testing with the way other modes are tested would be to include those questions in the overall exam, and require an overall pass rate of 75%.

Where did hams get their use of Q codes?

I see nothing wrong with one radio service using the procedures developed in another.

Interestingly, the use of the 10 codes on voice is seen by some as having more validity than the use of Q codes on voice. Why does one create such moral outrage if heard on amateur frequencies?

>solution that would drive test takers to memorize the correct answers,
>this is it.

How could they memorize randomly generated answers? ESP? :-)

>And then we get bent out of shape when takers know the correct answer --
> ...because they ... knew the answer.

Are we now getting upset because the new hams might actually know the answer? :-)

>Right now the only way we know folks are memorizing the question and
>answer pool is because that's what they are saying.

I have met only a handful of people who claim that they memorized the answers to the ham tests. One of them is Cecil, who says he memorized the answers in the 1950s. I personally think he knew more of the material than he thinks he did.

>1. the Q&A pool is public information and available (therefore people will
>take the shortcut)

IMHO, the easiest way to pass the test is to know and understand the material. I could not memorize the answers to hundreds of questions that I did not understand.

> 2. a great many of the questions and distractors are so convoluted
> and so specific that the logical method is to memorize.

Are you saying that the questions should not be convoluted and specific? The opposite of that is simple and vague.

If people memorize hundreds of right answers, they have learned more material than I did to get my General in 1964.

If I remember his post correctly, Larry Roll has you beat. He can use a lookup table to decode an unknown OOK character set at either 10 or 13 wpm; I forget which.

Of course, he never did take me up on the lobster-dinner wager. :-)

Speaking of which, only a few more days and I have another one in the win column. I need it, too, because after the bath I took with Carl and Rick, and a recent loss to an ARRL HQ staffer over QRP DXCC, I am in a lobster-meal deficit. :-)

And I know a ham who took over a year of some pretty serious studying, using a number of different code tapes, and lots of advice from lots of experience hams, to pass the code est by the skin of her teeth. She is quite intellegent and articulate.

All it shows is that we are all different. By the rule that some have offered that the code test should measure effort, she should be given an Extra just for working so hard. :-)

I'd say you're trolling for a reason to CALL someone a jerk, Burke...

Kinda like your brother Lennie who denies initiating calling people names but has been calling Fred, W4JLE "Jelly" all week.

Birds of a flightless feather, I'd say......

I built radios for 40 years as a n0-code SWL. Many of the old school SWL's without the means to buy good radios built them. I used to raid the local dump for discarded tv's and radios for parts (remember tvs with hv transformers and lots of cool tubes?) Learned code recently as another facet of SWL'ing, but decided to take the ham tests. Without ever taking a class or using any ARRL materials other than an old handbook, I passed the tech, general, and code. Missed the extra by one point. Almost choked on the code cuz 5 wpm is too slow...

If you do not want to that's just fine. But to remove from public areas which were already in place since the country began and have significant value for another is just plain wrong. How does the pledge go? "One nation under God"? How about your money - "In God We Trust"... you know, if it is that offensive to some liberals to have the word "God" anywhere, I will be happy to relieve them of that *objectionable* cash :)

>
> I haven't seen any church closings lately or the FCC putting any of

> Seems bizarre doesn't it?

Yes it does, we strongly agree on this point. It's good to see that others view it as wrong even without religious backing.

>
> And why do abortions take place? Because somebody wasn't being
> reponsible with sex!!

Again I could have not said it better myself. Personal responsibility is a strong aspect of what conservatism it's all about.

>
> Now, I'm a liberal ? Do I sound like one ?

Not at all, initially you sound more conservative than some conservatives. Which is why I have to ask, why do you subscribe to the liberal title since you think more like a conservative?

>
> Well, I think Bubba Bush will be the worst president we've had in 40

Yeah, that does get really tiring after a while. It is always one of two things: "it was someone else's fault", or "we were wronged". I may sound condescending here, but my daughter stopped using those excuses when she was 11 after she realized it sounded... well... stupid.

For hams who like CW, it is a useful and fun mode. I think all hams should try CW to see if they like it or not. It is not worth preserving through governmental requirements. It is worth preserving within ham radio if its merits support that preservation. I think it does. A Governmental requirement not based on merit is just another form of welfare.

> When the clamor by those who would expand the voice segments
> to the maximum limit consider your statements, how then will you react?
> And what good could it possibly do?

My Dad said always to tell the truth. When those people discover that you are lying about CW's capabilities, what do you think will happen? If CW cannot honestly stand on its own merits, then it deserves to be replaced by modes with more merit. Obfuscation about CW's merits will just hasten its demise.

> And you clearly overlook the fact that some posters here clearly state
> that Morse code is long past usefulness and the implication is clear

You, personally, have alienated a number of hams to the point that they would like to get rid of CW just to make you angry. If it weren't for your (and others) viscous personal attacks, those same hams wouldn't give CW a second thought. You (and other PCTA folk) are the worst enemies that CW ever had.

In article <943h3e$9r1$1@nnrp1.deja.com>,
LRod <lr0d@my-deja.com> wrote:

>
> Now, "personal," and "all the good numbers" are a different story.
>

Talked to a young fella on the repeater the other day who introduced himself by saying "my first personal is Jim and you're my first contact, QSL?".

He seemed like a nice sort, delighted that he had just received his shiny new call sign, and was anxious to make some new friends. Kinda sounded like I felt when I put my new call sign on the air the first time way back when, except probably brighter, cuz Jim is one of those young computer jocks. Me, I still got problems with the LL scale on my Pickett slide rule. Yep, I think Jim sounded brighter than me, quick to catch on to things.

But I don't think Jim will be back on the repeater. Before I had a chance to really get to know much about Jim, or even wrangle an invite to lunch, another station, with an impressive "senior" call sign joined the contact, flashed his shiny Radio Cop badge, and proceeded to issue Jim a "verbal speeding ticket" for improper lingo on the radio. "Radio Cop" said the term "personal" (and for that matter "handle") were unwelcome in ham radio, and that Q-signals were not to be used on VHF voice. Just generally made my newfound friend feel like an unwashed interloper. (Gosh, I've been saying "handle" since I was a conditional class. Slow to catch on, you know.)

Now I should point out that "Radio Cop" took pains to appear very well meaning. Didn't use any bad words that I noticed, was quite polite, even seemed like he was trying to be "helpful." In other words, he thought he was doing Jim a favor by pointing out his transgression from our sacred Amateur Radio way of doing things. I think Jim felt just the same way I did back in a new school in third grade when the well meaning teacher pointed out that "we don't keep our pencil behind our ear in this room." Sure enough, I looked around and none of my new classmates had pencils behind their ears. Sure was embarrassing, and at that moment I really wished I was back with my good old buddies in second grade. Now, if I'd been allowed to hang out a couple of days, I'm sure I would have learned how to properly stow my pencil. And if Jim would have hung around a couple of days on our repeater I just bet he would have noticed that his lingo, perhaps learned in another radio service, was a bit out of place, and pretty soon Jim would sound "just like the rest of us." Like I said, he seemed pretty bright to me, quick to catch on to things.

"Radio Cop", you have kept our hobby uncorrupted. I heard Jim down around 27 Mhz this morning, and saw his ad on eBay trying to sell his barely used 2-meter HT. I'm gonna miss my new friend Jim, because I think I could have learned something from him. Maybe you could have also.

Like I said, he seemed pretty bright to me, quick to catch on to things. What do think it was that he caught on to about us from "Radio Cop".

73, de Hans, K0HB

Are all VE's subject to the same set of rules? These guys seemed pretty
confident that they could charge $10 per exam ... which is why i did not
even attempt the extra class written element.... figured i'd wait an extra
month and study a little more so i wouldn't be wasting my money.

That's asking someone to prove a negative. If the above folk had not had Morse code forced down their throats, they would not feel the way they do about the mode. Now the only reason they want to end the use of Morse is to extract revenge on the PCTA folk. Morse code has become more than a mode. It has become a religion on one side and a symbol of religious oppression on the other side.

>point. We aren't fooled."

If that were the case, Paul, you wouldn't even bother to speak with me. Because you've spent all of your time trying to prove me wrong, and not making it. Most likely, the fact that both you and Coffman did extremely poorly in our exchanges explains your displeasure. The 'proof in the pudding,' though, is the end result, which predictions for the Service were totally consistent with the documentation both you and Coffman refused to accept. Thus I haven't see any great dispute over that fact from anyone; just resentment. In the end, the Service was caught short, as hams came to realize what had just happened to them. That's why there's movement now (altho too late) to bring back some Morse testing requirements, and a petition for reconsideration re: theory exams. So in that context, the only statement that Coffman was accurate about was his last, and that relating to the FCC: "we aren't fooled."

Regards,
Vince, WB2EZG

Many hams don't even own an HF transceiver. When I moved
to CA in 1971, I didn't take an HF rig with me. All I had
was VHF access. I was without CW capability for 15 years.

Yes, by definition, if they are operating legally as hams within the
ham bands, they are not freebanding.

> Those types don't reform just because they now have a ham
> license in hand. For far too many it just opens another door to
> mischief.

They are legal once they have a ham license in hand, Dick. When
they are legally talking on a ham band, they cannot possibly
be freebanding, now can they?

Using exactly the same logic, automobile operators should be required
to wear crash helmets to prevent head injuries in many accidents.
It's called diminishing returns, Dick. There is a point where the
extra effort is not worth the return on investment. We have reached
that point with Morse code. The necessary return on investment just
does not exist anymore. And, no, making you feel good is not a good
enough return on investment to require Morse code skill of all hams.

Vince, you remind me of a friend of mine. When I aske him what
he would do if his wife caught him in bed with another woman,
he answered, "I'd just deny it."

I'm expecting Clinton to start WWIII this week, dissolve the Congress,
and declare himself King BJ. :-)

Which is worse lobster-meal deficit or lobster deficit? Are you going
to Ft. Tuthill this year and/or any hamfests in and around Texas?

Bush did not win the popular vote.

see
http://128.242.205.65/inboxer/outrage/bushvote.htm

This is just more conservative spin.

Steve

It is probably more accurate to say that multiple choice tests measure with
a degree of certainty, the test takers ability to prepare for a test.

Sorry Hans, if he can't take some criticism then he needs to go be a
priest or something. Thats the trouble today. No one wants to pay
their way anymore. Heck when I first got on AM phone I was made to
feel 2 inches high. You know, not enough audio, your too week, give me
a call when you grow up youngun.. etc.

It didn't run me off, I just dug in and LEARNED.

```

The ARRL VE book, said, 1 fee for each test session, and it covered as many elements as the test taker wanted to take, or the VE have. But it is a new fee to retake a failed element. So as long as you keep passing you can do as many elements as you can pass for 1 fee. Remember though that most VE sessions have only 2 or 3 versions of a test element available and if you flunk all that they have, your done for that session.

How high is it? Is it near other conductors or dielectrics? Questions about the length of dipoles are in the question pool. What's wrong with them?

> 3. Explain the difference, if any, between an AC ground and a RF ground.

Looks like there's a typo in the test question. A better question might be to explain the differences between a DC ground and an RF ground.

I'd like to know how you feel about 10,000 armed abortion rights activists, or 10,000 armed environmentalists, or 10,000 convicted felons, or 10,000 armed Klu Klux Klansmen standing on the Capitol steps threatening to shoot your elected Congressman and Senators - acting on these Consitutional rights.

That's different, right?

73, Jim AC6XG

They maybe on the low end of the FCC's list, but the ARRL is interested in how many show up on 10m. Now with the creation of MURS they have an excuse to use opened up Ham 2m rigs, and most likely start to show up on 2m. I guess you figure if they don't bother you it must not be a problem for anyone else.

>These two examples are logically incongruent. There is no
>need for flying skills in radio operation, any radio service.

As usual, someone ELSE makes an analogy and Lennie the Loser tries to dismiss it as "incongruent". LENNIE is incongruent, but we are having an excessively difficult time dismissing HIM.

>To be legal, one has to have an amateur radio license in
>order to transmit RF in the amateur radio bands...but the
>necessity to "solo" for an amateur radio license in not a
>federal requirement.

No...to be "legal" one only need be in the PRESENCE of a third party who DOES have an Amatuer license of appropriate class. Even YOU can operate on the Amateur bands without a license...you just have to find someone foolhearty enough to jeopardize THIER license in doing so.

>>How long it would take to teach yourself is another matter. However I
>>once worked with a guy who was an avid simulator pilot that could
>>probably have soloed in 4 hours. he claimed several thousand hours on
>>his Microsoft flight simulator.

>The above is both incongruent, illogical, and rather absurd.

Gee, Lennie, in another post in this same thread you correctly point out that the Wright Brothers were self taught in flying skills, yet HERE you call it "incongruent, illogical and rather absurd" that someone could solo in only 4 hours.

In 1982 or thereabouts a Marine Lance Corporal named Foote commandeered an A4 Skyhawk at MCAS El Toro and took it for over an hour joyride. LCpl Foote was an accomplish sailplane pilot however had never flown a jet aircraft before. He had recently been denied flight school in the Armed Forces due to an alleged inner ear disorder.

He not only flew a nominal flight profile, but he also shot a flawless approach at NZJ. And this he did with only "simulator" time in any powered aircraft, let alone a jet fighter.

Sorry I don't have the specific dates, however I am sure the Orange County Register could find the specifics and verify them for you.

>As to self-learning radio arts, be they technology or operating
>practices, that can be totally self-taught.

The FAA currently allows "self-taught" persons to fly without a license under Part 103 of the FAR's.

>In a career of design and development of radio and
>electronics, both myself and the vast majority of
>career contemporaries were "self-taught" on the changing
>state of the radio-electronics arts.

"But that was yesterday, and yesterday's gone". TODAY'S engineers routinely attend continuing education seminars, as I can testify to since I process many of the requests at my current employment. Seems they don't feel as though possession of MSEE's and PhD's prevent them from sitting in a classroom.

>There was no time to attend "formal schooling" or get "accreditation"
>through nice little paper certificates with grade points to attest to
>"qualified new skills." Myself and the vast majority of my
>career contemporaties already had formal schooling.

"That was all the education we needed and pooh on the rest"
Today's EE's find it counter productive to waste time reinventing the
wheel and attend appropriate update courses as needed.

>There were hardly any instructors or courses for each new radio-
>electronic art that evolved.

Seems the Armed Forces didn't have a problem sending us to schools
for just that event. You "commercial" guys couldn't find the time,
huh...?!?!?

>By comparison, the necessary knowledge to get an amateur license and
>to begin in the amateur radio hobby can be entirely self-taught.

True...any your point is...?!?!

>The amateur radio "solo" requirement is some flight of fancy, or
>rather a fantasy based on some "instructor's" aberrant self-
>professed "superiority."

And your continued derision of Amateurs is only further evidence
of your own "bruised ego" that your self-inflicted hatred has made
manifest.

Get a life, creep.

Sorry to bust up the No-Code kills (McDermott, KB1EVA) thread again,
Breaking news:

One of the men killed during this cowardly attack had a permit to carry in NH; but was denied the ability to do so in Mass. because he wasn't politically connected. Looks like Massachsuetts gun laws may have well contributed to the death of at least five people:

"Source: Boston Herald (Letters)
Published: Friday, Jan 11, 2001
Author: David Bergquist

Louis "Sandy" Javelle was my friend. On Dec. 26 in Wakefield, he was killed by a madman.

Sandy held both a federal firearms license and a permit to carry a handgun in New Hampshire. Ironically, the gun laws in Massachusetts prevented him from carrying a concealed handgun. But these same laws did not prevent Michael McDermott from obtaining illegal firearms.

When the rampage started, Sandy told co-workers to lock the door behind him and barricade it. He then confronted McDermott and became the third victim. If Sandy had been permitted to carry a pistol, he could have stopped McDermott. That meant that five other people could possible have survived this tragedy. But Sandy did not have that option.

David Bergquist, Temple, N.H."

I'm enjoying your argument in the third person here, Cecil. Which Jim are you claiming said these things? Quotes might better illustrate your point. Or they might not.

What's interesting to me, is the "vintage" of those "outraged". With a few exceptions they are usually not "old timers" or "newbies" but rather those licensed in the 70's through about 1988 or so. These are the ones who posture about "purity of the ham race" and look down their nose at any ham who "isn't like them". They are, by and large, products of the incentive licensing system with it's fragmentation of the hobby into exclusive ghettos, reeking of "status" and "rank" and "I can beep faster than you can beep".

When you and I got into this hobby, you got no special call sign, no special status, no special band segments, the callbook didn't show your class, and nobody could poke around the QRZ.COM website to check your "status". All of us, >ALL OF US<, exuberantly played in the ether as equals, and nobody gave a rip if you were a Conditional, General, Advanced, or Extra. You were a ham - PERIOD! I think that's what makes us old-timers more accepting of those who "don't act just like us".

73, Hans, K0HB
--

There are two basic rules to being human.

Rule number one: Human beings want nothing more than
to contribute to other human beings.

Rule number two: Human beings will not tolerate being
contributed to.

Well, somebody's got to do it. Why not certify an operation at a local club? If people are serious about self enforcement, then get the public backing of a club to pursue the nastiest cases the FCC doesn't care about.

I agree with your assessment, Hans. I'm not fond of the idea either. I figure that by insisting that club back the results, maybe some of the frequency cops will see their limits and turn in their blue jump suits and tin badges.

No, it's not a perfect solution. But maybe it's better than hiding
the problems under a rock, the way the FCC has over the last couple
decades.

  The Los Angeles PD never used the "10" code.  The only
  non-plain-language "codes" were "Code 1" through "Code 7" and
  they actually published a brochure detailing them.

  The Los Angeles Sheriff's Department used a "nine" code.

  The California Highway Patrol used a modified "10" code with
  "eleven" code additions.

  Made it interesting for us 50s-60s era police radio buffs
  (before scanners were avaliable).

That's easy for an engineer to say...

How many hours of study do you estimate that it would take for a
non-technical person to "know and understand" all the material to
pass the Extra test?

It's been a few years, but when I made General, I took the Tech,
General, and 13 WPM code at the same time for one fee ($6.45).
At another session I took the Extra and the 20 WPM code tests
again for one fee ($6.45). At the time, I was under the impression
that this fee went directly to the ARRL, to cover the cost
of the testing materials that they supplied. That ment that the
club, which was running the VE session, was really charging
nothing for their time.

Was I correct in my reasoning? Aren't they, the club, also allowed
to charge a small fee to cover their expenses?

> >
> > There was no question pool in those days.

Actually there was a question pool, but the actual questions and
answers weren't available to the public. The ARRL Licence Manual and
Ameco publications were study guides to give you an idea of what was
required, and what to study. Many were paraphrased from the
recollections of those who took the tests.

> > > How many times did you have to take the exams?
> >
> > Once. Other than blowing a few questions, it was pretty easy for me.

In the 70's you had to wait a year to retake the test. You would lose
your Novice ticket if you didn't upgrade. These days I hear all the
time of people taking the test numerous times. Really sad.

This all adds up to one big mistake. By lowering standards and force
feeding numerous ignorant individuals onto the ham bands, how are we
improving the standing of Amateur Radio? When I compare the technical
discussions and considerate behavior of those who knew full well they
could be heard everywhere, giving way to Hate and Discontent in order
to impress a new group of listeners, who's going to want to (much less
be savy enough to) save allocations in the future? I have seen Ham
Radio Magazine die off and QEX almost die off. We used to have to fill
out our own 610 forms, and we joked that it was a literacy test. Now
that we don't have to do that, how many new hams won't even be able to
read QST, much less give a S***?

We have to stop allowing ourselves to be re-formed for the wishes of "wanna bees".

Jim, ac6tk

Why does it make sense to allow criminals to have guns yet prohibit
law-abiding citizens the right to have a gun with which to defend
themselves?

That doesn't make sense. I believe it was a month, not a year.

I redirect this thread from r.r.a.antenna where it doesn't belong.
Jim, N2EY, is redirecting everything back to r.r.a.antenna where it
doesn't belong. That's the reason for the disconnect. Jim will not
admit that there ever has been a single code-tested ham using Morse
equipment for the purpose of jamming. He refuses to condemn code-tested hams who use Morse equipment for the purpose of jamming since
he says there never has been any. That's because any admission of
such would violate the immaculate conception virginal religious
aspect of Morse code to the PCTA.

Felling guilty, are we? There's more than one person named Jim, Jim.
This thread originated on r.r.a.antenna where it doesn't belong.

Even cops often shorten the 10 codes to just the last number. It makes
sense if it takes less air time and the meaning is understood by all.
10 codes, although codes, actually become words in the users minds,
and like words often evolve with use...

Just proves "we" don't want any truck drivers, janitors, garbage men,
or lawyers in ham radio. :-) However, the ham who gave me my first
exam-by-mail in 1952 was a lawyer.

> memorize them?

Memorizing these seemingly random "facts" is worthless (except for frequency allocations and some regs) without deeper study. The test questions are really easily performed signposts, designed to lead you to further study along those lines. Much valuable knowlege can only come through further research and investigation. The tests are like a child's flash cards, helping you on to greater concepts.

If you go no further, you have failed at Amateur Radio.

Nope, it's not and I speak from experience. I memorized those random
facts and that same framework later served me as an outline for knowledge
in electronics. I still fill in the blanks as needed.

Like I said, an outline to future knowledge.

> If you go no further, you have failed at Amateur Radio.

Lots of people fail at lots of things. Some people failed at amateur
radio because they were chased away by hams requiring perfection in
beginners. Some simply lost interest. What's wrong with live and
let live?

Sorry, Dan, this is amateur radio, not the Marines. Hazing has been
frowned on for a number of years now.

That's my goal in life, Aaron, to be considered an outsider.
Why would anyone want to be a lemming?

The ARRL VEC allows the VEs to retain a portion of the fee (up to $4 of the current $10 fee, which is per session, not per exam) to cover expenses if they wish to do so (this wasn't originally the case). The ARRL requires that records of such expenses be kept, although the FCC no longer requires reporting. The FCC also no longer specifies the maximum amount which can be charged (there never has been a minimum). ARRL/VEC is charging $10, but others may charge more or less; the marketplace will probably decide.

From the ARRL letter, December 15, 2000:
==>FCC OPENS DOOR TO INCREASED TEST FEES FOR 2001

The FCC has suspended its regulatory limit on the reimbursement fee for Amateur Radio examinations, and the ARRL VEC says a new $10 test fee will go into effect January 1. An FCC Public Notice released December 4 explained that the Commission did not plan to announce a maximum reimbursement fee for 2001 since the requirement to do so no longer appears in the Communications Act.

For now, the FCC says, it will suspend enforcement of the fee provision, ?97.527(b), which continues to appear in the FCC rules. Some, if not all, of the nation's other Volunteer Examiner Coordinators are expected to follow suit, although at least one VEC charges no test fee whatsoever.

ARRL VEC Manager Bart Jahnke, W9JJ, says the ARRL VEC's current fee of $6.65 was based on the provision in the Communications Act, adopted in 1984, that established a $4 cap on reimbursement of out-of-pocket costs with an annual adjustment based on the Consumer Price Index. The new, higher fee reflects the fact that the ARRL VEC is doing more of the work on behalf of the FCC than was originally envisioned when the provision was included in the

Communications Act. That effort includes data entry for all new and upgrade license applications once done by FCC staffers.

ARRL VEC volunteer examiners will continue to charge applicants $6.65 through the end of 2000.

Lawlessness and vigilantism is never a solution. One cannot
undo the past to correct peceived mistakes or perceived "rocks."

Consider that CB users outnumber hams by at least 10:1 and
there are more big rig drivers among the CB users than there
are hams. Starting some vigilante movement against evil CB
users and worse-than-evil freebanders might result in another
big rig crash such as in Sacramento, CA, by one frustrated
ex-felon who killed only himself and made a mess on the
steps of the California Capitol Building. It served NO purpose.

There is no time machine to go back to undo the past. There
is the possibility that the existing and future FCC can solve
some problems in US civil radio. Support the FCC in
regulation of radio...or become lawless vigilantes who are
outnumbered by others. There is no honor or respect in
vigilanteism.

I think that's a pretty good assessment of our current exams. The tests
are 1.) valid; 2.) provide some degree of confidence that the examinee
has absorbed at least a minimum level of information; and 3.) the
examinee won't pass the test if he doesn't exceed that threshhold.

The quotes are on r.r.a.antenna where this thread didn't belong.

Unfortunately, Dick seems to want to make his personal knowledge level into
the desired threshold. The threshold should never be below his knowledge
level whatever that happens to be at the time. He doesn't seem to realize
that that approach will guarantee that all hams are superior to him which
is not hard to visualize at all.

Actually, it's no nonsense, no subjective feeling about objective
subjects. Why don't you just come out and admit that Morse code
is your religion?

Len, I guess I can understand your resentment towards those that obtained a formal education. The fact is many have neither the ability or the self discipline to learn on their own. They are not blessed with your tenacity and innate intelligence.

The problem with being self taught is you have someone as ignorant as you for a teacher.

One wonders if a self taught instant extra has even considered the safety issues associated with high voltages and mechanical supports.

I suffered through a formal education that pointed me in directions I would not have even considered. Things that I would have discounted on my own as being useless, I admit some where, but many came to be of valuable use in latter years.

While your opinions of my stances were read and enjoyed, as always I disagree with you.

Probably the same moral outrage that causes all you Yankees to get your panties in a wad when you see a Confederate flag and scream KKK!

People have a tendency to assign values to something symbolic rather it is accurate or not!

I still say "handle", I used it a long time before any CBer used it, and the use by a CBer or anyone else does not obviate me using it.

Look at the term "Good Buddy", some where along the line it got changed from an unknown friend on the CB airwaves to a derisive term implying homosexuality.

Who is the grand guru of symbols that assigns these meanings?

"W1RFI" <w1rfi@aol.com> wrote in message

(Don't choke, Len) I agree. We need to put some teeth in present FCC regs and let THEM do the enforcing. However, just like your local police occassionally need extra eyes and ears, so does the FCC need people out there providing them with assistance and information. They can't be everywhere all the time.

Also, it doesn't hurt ANY radio user to be proactive in community issues, especially where education of "lay" users and consumers is important.

Sterile, precise, machine-like code is best copied by machines, automatons, or Brian. Reminds me of trying to engage in casual conversation with HAL from 2001 -- yecchhhh! I am a human, and prefer to copy code which sounds like it is being sent by a human. Didaahhhhhhhhhhdit?

Just for grins I checked the calls on your stupid list against my logs. In the past year I have had contest QSO's with 11 stations on the list. Five of them have sent me QSL's. So much for your credibility.

Mr. Sumner probably didn't want to come right out and say that they have
a
specially shaped file for Vince's documents.

I think in your haste, you may have misread my post.

I'm talking about a monitoring station run by someone who knows what IMD is, who knows how to DF a signal and determine source, who knows how to measure frequency and bandwidth, and most importantly who would have an opinion which a court of law could recognize. That's all. The purpose would be strictly to act as witnesses for prosecution of offenders inside the amateur radio bands.

Prosecution would still have to be done by the FCC. The difference here is that at least they wouldn't have to use valuable time at a monitoring station.

>There is no time machine to go back to undo the past. There

I agree completely. And I assure you, that is not what I'm suggesting.

I really don't want to be drawn into your argument about how lovely someone swing is or isn't. I simply wanted to comment on your use of the word sterile. A lack of a swing is not sterile code. I would simply like to understand your negative attitude about properly timed code.

That might be, but I don't think Dick is really the issue. I just think it would be constructive to discuss testing from the standpoint of threshold rather than painting with so broad a brush to describe it as invalid.

Is there an obvious answer to an accuasation that digital modes are also
now used for jamming?

Phil, you are absolutely correct on these. I was an Extra in 1966, and got in on the second window in 1976 for a callsign. BTW, there was a one-time $30 fee for selection of a personalized callsign. We are not defined as "vanity" calls now however. That window is long forgotten by the FCC.

Jim,

I don't know how much plainer I can make this! It sounds like robots talking to robots.

Machine-perfect code is just fine for sending recorded traffic, navy messages (way back then), and other similar "formal" uses. Just like police dispatchers speak in monotone automaton fashion.

But when I'm in casual conversation on the airwaves, with another human being, enjoying the art of Morse, I want it to have character, inflection, and contextual emphasis.

If you don't agree with that attitude, don't answer my CQ, because you

won't be treated to "properly timed" code. Hopefully that doesn't make
me a bad person, but I'm sure Brian will call me a jerk anyhow.

So it's more of a personal preference rather than an absolute kind of
thing. I prefer code that is easy to copy to the mal-adjusted bug,
non-robotic sound.

Well, practice makes perfect I always say. ;-)

At one time that was completely correct. I ran a DeVry/Great Lakes core from 1984 (before League involvement, by the way) through 1993. At first the local core didn't get anything, but eventually DeVry/Great Lakes started a core reimbursement progam. By the time they folded and we changed over to ARRL, the League was reimbursing up to $4 to the local core.

> That ment that the club, which was running the VE session, was
> really charging nothing for their time.

Also correct. That's why we are called "volunteer examiners." My club, however, covered all my costs for materials since I prepared all of our written and code exam materials and purchased or prepared other materials such as blank paper, pencils, 610s, etc.

> Was I correct in my reasoning? Aren't they, the club, also allowed
> to charge a small fee to cover their expenses?

Not at the VE Core level. Only at the VEC (coordinator) level. And when a VEC does allow expenses to be covered by a core, it's always as a rebate from the VEC (I speak from DeVry/Great Lakes and ARRL experience only).

I'm sorry you had that experience. I can't answer whether a VEC can instruct their cores to charge for each element. I can say that ARRL does not, nor did DeVry/Great Lakes when I was with them.

Who was the VEC for your exam? I have my own suspicion, and if I'm correct it's further confirmation of why I will never have anything to do with him.

Irrespective of who it is, it's an example of poor training of the VE team. That's one of the things that should have been basic in their instruction. I suggest you write a letter of complaint to the VEC.

They've been on the low end of ten for eons when the spots are up and I've been there, too. Right off most of those who are audible here are Central and South American stations which nobody in this country including the FCC or the ARRL can do anything about. I've never had a problem working either thru or around them with 100 watts worth of cw, they're just some more ignorable garbage on the ham bands. I'd sure as hell rather have to deal with a freebander on ten for a new one than I would have to deal with Radio Moscow for a new one on 40.

Indeed and agreed. Probable factoid: The FCC would much prefer dealing with some inane but basically harmless freebanders than they would a phlanx of amateur (in the more common sense) "helper" frequency cops up their butts.

I guess it's a matter of semantics. Retests of failed elements are, for
paperwork purposes, considered separate sessions (or sittings).

The ARRL/VE Manual says "The ARRL/VEC charges $6.65 per candidate, per
session." Of course, that was published before the fee increased to $10.

The original poster said they were going to charge for each exam (element),
which is inappropriate.

A vigorous attempt is to be made at the Cairo Conference to take the present 160meter band away from the amateurs. Our prized 40-meter band is the goal of other interests. One of the more-important commercial radio executives recently said to this writer-"the amateur will eventually find his resting place in the five-meter band, unless he is aggressive enough to fight for the privileges he now enjoys."

The cry of this magazine has been for aggressive leadership! Look to Congress for leadership . . . to pull us out of the sea of difficulty. Congress can help us get some amateur-minded men on the Delegation to Cairo. And, while we are at it, why not ask President Roosevelt to put a couple of good amateurs on the FCC, if only in an advisory capacity without any cost whatsoever to the Government? We know of many good men who are anxious to serve!

Political Editor - December 1934 Radio magazine

It'll have to do.  "Ghengus Hans" doesn't ring true either.

There's lots of accidental jamming because of mail boxes. I suspect all modes are used for jamming at one time or another. I once heard someone playing music using FM on 3950.

That's true, and I'm happy that the more I practice the art of Morse, the further from machine code it sounds. If this trend continues a couple more decades, I may indeed reach perfection.

What standards have been lowered? The existing "entry" level ticket
material is so large and complex that it cannot be run away from.

When I compare the technical
> discussions and considerate behavior of those who knew full well they
> could be heard everywhere,

My comments prior to the restructuring:

What I fear most about the restructuring is a lack of enforcement. And

what I fear most about maintaining the status quo is a lack of
enforcement.

> giving way to Hate and Discontent

Ex-Jim, much of the hate and discontent is coming from some OTs. The
ones wha have been hams a long time. The ones who know and count on
being heard everywhere.

in order
> to impress a new group of listeners, who's going to want to (much less

They'll have to be web savvy and take care of biddness via the FCC ULS
page. It's complexity goes beyond a mere literacy test.

> We have to stop allowing ourselves to be re-formed for the wishes
> of "wanna bees".
>
> Jim, ac6tk

Jim, I wish I could agree with you over the last 2/3 of your message,
but I see things differently. I give a S***, yet I am dead set against
unnecessary government regulation and interference in my life. I am for
a simplified licensing structure, and have advocated ONE amateur radio
license of about the level of General. I will support a simplified
entry level license, with reduced privileges.

Behavior problems should be met with a nice letter from Riley. Followed
by a big stick.

73, Brian

Can't make Dayton this time. Nice idea though. Perhaps next time.

Hey, we're having an earthquake here (it started just as I was typing the last line). Nothing big - just enough to vibrate the water in my glass (can barely feel it). Strange!

Ed:

You betcher bippy I know what it means. And what it doesn't.

When you take a driver's test you 1.)take a written test and 2.)take a practical operational exam where you demonstrate that you can actuall drive the darn thing.

When you qualify as a pilot you 1.)take a written test, and 2.)take a practical operational exam where you demonstrate that you actually can fly the darn thing.

When you take a ham radio test you 1.)take a written test and 2.)take a practical operational exam where you demonstrate that you can actually copy code.

In neither case is one exam "emphasized" over the other. You have to make a passing grade on both. It's called MEETING THE REQUIREMENTS FOR THE LICENSE!

All the whiners are still at it just a loudly as though the 5wpm code test actually amounted to something. Whatta joke!

Your day was clearly a better fella than you.

When those people discover that you
> are lying about CW's capabilities, what do you think will happen?

So would you care to lay out just how it is that I'm "lying" about
CW's capabilities?
CW *has no* capabilities until PEOPLE are able to use it.

If CW
> cannot honestly stand on its own merits, then it deserves to be replaced
> by modes with more merit. Obfuscation about CW's merits will just hasten
> its demise.

You are not only a fool, you are also a liar. CW as a vital functioning

operational traffic handling mode has been in steady use for a century.
Nothing *but* the lack of operators who can use it can change that.
You can't avoid knowing that so you think you can just destroy truth.
Won't work, at least as there are a few of us left. When all testing is
gone it is only a matter of a little time.

September 1958
Excerpts from FCC comments for removal of the 11 meter amateur band:

Reallocation of frequencies in the range 26.96-27.23 Mc.

The Notice of Proposed Rule Making in this proceeding recognized a need for additional spectrum space for personal use by any individual, especially those persons now holding authorizations for Class A stations in the Citizens Radio Service who will not be able to establish eligibility in any of the Industrial or Land Transportation Radio Services, as well as a substantial need for additional frequencies in the 28 Mc. range for use in the remote control of such objects or devices as model aircraft. Accordingly, it was proposed to reallocate frequencies in the band 26.96-27.23 Mc. from the Amateur Radio Service to the Citizens Radio Service for use by Class A stations for general purposes and, in addition, provide certain other frequencies, to Class C stations exclusively for the purpose of remote control. The Commission stated that this reallocation appeared appropriate because the frequencies in this band are a part of a larger frequency band within which interference may normally be expected and must be accepted from industrial, scientific and medical (1SM) devices and because, as a result of the foregoing, only limited use of this band has been made by the amateurs. In addition, it was pointed out that amateurs, as individuals, would be able to obtain licenses in the Citizens Radio Service for either radio control or voice communication in this band.

In connection with this proposal, the Commission received a very large number of comments from both individual amateurs and modelers, as well as clubs and organizations representing persons active in each of these hobbies. In general, it may be said that all but a few comments from modelers enthusiastically supported the proposal and most of those from persons who are both amateurs and modelers also supported the reallocation. Most of the comments from other amateurs were in complete opposition to any use by the Citizens Radio Service of frequencies in this band. However, a substantial number suggested that the band be shared by the Amateur and Citizens Radio Services. A few amateurs suggested that other amateur frequencies be substituted in lieu of those proposed, or concurred in tile proposed reallocation.

Typical of the reasons set forth by the amateurs opposing deletion of the availability of frequencies in the 26.96-27.23 Mc. range to the Amateur Radio Service are:

(a) The adoption of the Commission a proposal would constitute a violation of the Atlantic City Radio Regulations to which the United States is a signatory nation.

This band is the only one in the lower frequency ranges open to the amateurs where the Commission permits certain types of emissions and operations, and accordingly where the amateurs may engage in experimentation in facsimile, continuous carrier, and duplex operations.

(b) The characteristic which make these frequencies particularly good for long range and international communications will cause too much interference from skip, and prevent the widespread use of this band for short range communications and remote control.

(c) The recent non-use of this band by amateurs is due to cyclical "sun spots".

(d) Other amateur bands are overcrowded, the service is expanding at a rapid rate, and the 26.96-27.23 Mc. band is the only area left for expansion.

(e) The fact that an amateur might obtain a Citizens Radio Service authorization is not an adequate substitute because some amateurs could not meet the age requirement of that service, and in addition, amateurs would not be permitted to make their own adjustments to a citizens radio station.

On the other hand, the modelers point out their dire and immediate need for additional frequencies, stating that the situation has been aggravated by recent authorizations of high-powered stations in other radio services on the frequency 27.255 Mc. for such purposes as traffic controls and remote radio paging. They further state that the use of frequencies in the 26.96-27.23 Mc. band for control of models is feasible and is similar to allocation practices found practical by other governments. The Commission is well aware of the history of the Amateur Radio Service in the development of the radio art and in providing a springboard of interest for future engineers and scientists. However, it must also be remembered that the remote control of models fosters a similar interest in young people and is a hobby in which young people are able to participate. The Commission is aware of the Amateurs outstanding record of assistance in local and national disasters. The Commission also recognizes that the Amateur Radio Service is a rapidly expanding service, but then, so is tile number of persons engaged in the remote control of models expanding at an ever increasing rate. While both amateurs and modelers suggest that spot frequencies located in different portions of the spectrum might be more desirable for remote control, such allocations are simply not possible at this time with the present scarcity of spectrum space.

In addition to filling the need for additional frequencies for remote control purposes, the proposed reallocation would also fill all urgent need for additional frequencies for voice communications by persons who will be unable to establish their eligibility in any of the Land Transportation or Industrial Radio Services, Although the Commission may have originally underestimated the use of the 26.96-27.23 Mc. band by amateurs, the use of that band is still considerably less than in other bands available to the amateurs, a fact which is admitted by many amateurs and established by monitoring observations of tile Commission. As to whether the proposed reallocation would be in violation of the Atlantic City Radio Regulations, the Commission considers that no violation is involved. The primary world-wide allocation (if that frequency band is to the Fixed and Mobile Services and the footnote permitting its use by amateurs is merely permissive. Therefore, the reallocation ordered herein and in the companion proceeding in Docket No. 11959 from the Amateur Radio Service to the Citizens Radio Service is not in violation of the Regulations.

.As stated above, the 26.96-27.23 Mc. band is a part of a larger band in which interference may normally be expected from ISM devices. Most of the reasons presented in opposition to the proposed reallocation of that band to the, Citizens Radio Service were based upon potential use of this band in tile future by the Amateur Radio Service instead of actual need or existing use of the band. Monitoring records indicate

that this band is not heavily used by the Amateur Radio Service, due obviously to the interference hazard presented by the operation of ISM devices on 27.12 Ale.
The Commission feels that substantially greater use can be made of this band by the Citizens Radio Service and that the loss to the Amateur Radio Service is negligible. While it is true that certain operations have been possible in this band which were not permitted on lower frequencies available to the Amateur Radio Service, such operations are still possible on frequencies above 51 Mc. and frequencies in those ranges appear to be coming into even greater usage by the amateurs than the band here under consideration. Although the Commission realizes that, in many cases an authorization in the Citizens Radio Service may not be an adequate substitute for the Privileges lost in this band; nevertheless, the Commission finds that public interest, convenience and necessity requires the reallocation of the 26.96-27.23 Mc. band to the Citizens Radio Service for the purposes proposed. The recommendation that this band be shared by the two services involved is not adopted, since that action would be inconsistent with the Commission's position in international affairs regarding the shared use of amateur bands.

> Where did "slider" originate, Dan?

Now we're getting into an area I can speak about.

As any self respecting Chicagoan (and the environs) knows, a slider is a small square hamburger with a pickle and onions that is only purchased and eaten in quantities of 5 or more. Fries and onion rings are NOT optional, they must be consumed as well for the full effect. And that effect probably is what gives them the name "sliders."

Oh, I guess their real name is White Castle. I don't think that's a pronouncable word, however. Everytime I've heard someone try, it comes out "sliders." TAKE HOME A SACKFUL is their slogan.

Anyone having to live somewhere besides Chicago (and the environs) is comforted by the fact that they are available frozen in many other areas of the country.

Why should they? Another few questions and they had Tech Plus with all
Novice privileges plus 2 meters and up. With such a convoluted
licensing system, no wonder the Novice class faded away.
There was a time when FCC bothered to find out what they could expect
from changes to be made in ham radio before they made them. Somewhere
along the way that went by the way. Right along with retirements, I
suppose.

Here I agree with you Ed. Perhaps this was because of the Morse exam, which might be considered ancient and snail-like by modern youngsters... but I believe it is also because ham radio, even without a Morse code exam, is considered old hat by those who are already using cell-phones and capable of brousing on the Internet. In my opinion we should not have abandoned the Novice concept because of the response that the Novice entry was getting....Instead we should have made a more modern Novice entry, including a test where high school techies could show off all that they were learning with regard to computer operation and modern personal communication. Maybe if the ITU won't eliminate the CW HF requirement...the Novice license should only grant VHF and above privilages...but when the ITU eliminates CW requirements some HF privileges should also be granted...not just so future Novices could practice Morse code...but so they could get some taste of HF DX SSB.
At any rate the present license structure is not set up to allow entry in a way that it can compete with non-licensed communication. At the other end... the highest class of Ham license (Extra Class) can not qualify anyone as a modern communications maven.

Three classes of license can not fit all; Can not provide motivation for easy entry; Can not indicate the value of advanced Hams to the USA! The present structure can only serve to satisfy OT hams who do not want to be tested on modern communications methods and are only interested in retaining their existing privileges;...it can not attract new blood as it appears to be too difficult for beginners and much too easy for advanced modern communication experimenters. Without lots of eager beginners, as well as knowlegable techie experimenters, the future of the hobby is doomed...

UNLESS...Hams get MORE license classes and official FCC technical endorsements.

Thanks for your comments Ed...I know that you mean well....BUT haven't YOU noticed?

73,
Bob Wex w2ilp (Insure License Potential) (Influence Little People)

It was once said that the moral test of
government is how that government treats
those who are at the dawn of life, the
children; those who are at the twilight
of life, the elderly; and those who are
in the shadow of life - the sick, the
needy and the handicapped.
--Hubert H. Humphry (1977)--

Americans have always had an ambivalent
attitude toward intelligence. When they
feel threatened, they want a lot of it,
and when they don't, they regard the whole
thing as somewhat immoral.
--Vernon A. Walters (1978)--

I beleve that we have an obligation to
those in need, but that government
should not be the provider of first
resort for things that the private
sector can produce better.
--George Bush [Sr] (1989)--

I believe that private industries must
be the providers of first resort but
I wouldn't feel safe flying without
the FAA...or communicating without
the FCC...and I wouldn't want to have
to depend on "Consumer Reports" and
"Sixty Minutes" to warn me of recalls
that should have been made public by
Ford or Goodyear.

The timing is impecable. Why would those things run in beacon mode - on 40 meter phone frequencies?

> I suspect all
> modes are used for jamming at one time or another.

Good point.

>I once heard someone
> playing music using FM on 3950.

I doubt there's anything that hasn't been heard on that frequency.

I'm an art student with no radio experience who needs to buy an FM transmitter for a project he's working on. I have this metal box with an FM radio inside it. It picks up all local stations fine, even inside the metal box. For my project, I'm trying to broadcast digital voice from my computer onto an FM frequency and into the box. I spent $30 on a transmitter from Radioshack, and it worked so poorly that I could barely pick up the signal even when the radio was outside of the metal box. I don't want to make this mistake again.

Keeping in mind that I can't build a radio and that I need an FM transmitter with a stereo jack on it (so I can hook it into my computer), does anyone know of a cheap solution to my problem? Or if this isn't the best usenet group to post this in, can anyone point me to a more appropriate one?

Is 'perfection' a new synonym for the word 'obliteration'? Ya arta just go for speed. If'n ya get fast enough, nobody will be able to copy what you're sayin' that way either! That'll show 'em.

I really have no idea what you are talking about, Hans. But I'm glad you do.
Each to his own in this hobby. Keep your words and letters separate, and I'll try an foller ya.

One better group would be rec.radio.amateur.equipment. It sounds like you
need a transmitter like those used in wireless microphones. Poke around
the music and broadcast industries.

I forget how many 10 codes there are/were on the "official list" but I
think it's around to thirty of 'em. 40? Looney-tunes. All they do is tax
memories and generate mistakes and confusion when you least needed either.

>
In the mid-70s I set up a passive CB-equipped neighborhood Townwatch
security association and created a completly non-standard 10 code list of
about 12 codes which still works well. Those codes don't go any farther
than routine operations, mostly to avoid spilling the beans about when the
patrols are or are  not "on the street" or where they are, etc. All other
comms are plain language per all police operations in the Philly area I've
heard. I've noticed that the locals are also packing cell phones these
days, that oughta cut down on problems with the scanner nuts.

>drive the darn thing.

The present testing for Morse code is analogous to my driving test determining only if I signal correctly. If I fail to signal correctly, I don't get my license.

If you really believe that Amateur Radio testing requires practical testing, you would advocate a wide range of practical tests that test the ability of the applicant to operate a wide range of modes.

Did your comments to the FCC ask that they give practical tests in setting up a station, selecting a radio, operating modes other than Morse code, etc? If not, then, IMHO, you are seeking only to keep Morse code testing and a "practical operating exam" has nothing to do with it.

I'm sure you know this.

>coming, the old brawl has simply moved up the spectrum.

And those threats did actually surface, again and again over the decades. It was only by addressing them at the international level that Amateur Radio retained its spectrum.

Don't just look to VHF and up for spectrum threats. There are HF allocations on the plate now, both with new spectrum being sought and with spectrum under challenge. Even 40 meters is once again going to be considered. The goal is, of course, to get an exclusive allocation near 7 MHz, but this may not end up quite as good as it sounds. How would you feel if that exclusive allocation were 200 kHz wide? I can tell you, the European hams would claim great victory, of course, going from 100 kHz to 200 kHz, but in the US, we would "lose" 100 kHz if that came to pass. IMHO, we are better off if it happens, because I can't make much effective use of spectrum above 7.1 MHz anyway; if 7.1-7.2 were cleared of broadcasters, the band, IMHO, would be "expanded."

Of course, if it did come down that way, we would hear from the doom and gloom contingent pretty quickly. :-)

Something I consider when working search and pouncing in the SS contest. Those stations who did not answer my QSL requests from years past do not get my time for another contact.

I am sure this applies to DXers, too.

The scope of the Technician exam is at least an order of magnitude more than was the scope of the 1963 Novice exam I took.

How is this "lowering standards?"

>Of course he could have avoided the gaff by simply listening to the
>repeater for a few weeks before using it to see how things are done.

I didn't listen to the bands for a few weeks before using my Novice ticket. The day it showed up in the mailbox, I sent my first CQ and made a few contacts.

The "gaff" could have been avoided if everyone had decided that it wasn't a big enough deal to be labeled a "gaff" in the first place. How was he to know that he might face criticism if he didn't choose the correct words when he introduced himself to people? Let's see, after a few weeks, he MIGHT have figured out that "handle" was okay if he was talking to an old timer, but a newcomer might think he used to be a CBer, and he MIGHT have been a freebander, so he should ....

At any rate, I hope he received a warm welcome to our community instead of a lecture.

>> A "No Coder" is jamming you on 40m SSB?

>Well if a "No licenser" did it what's to stop a "No coder"?

Did the person identify so you could determine whether he or she had a license or not and whether they had passed a code test?

Would the jamming have been aceptable to you if you learned it had been done by someone who passed a code test?

>That's asking someone to prove a negative.

It does not need to be proved to me that there is someone, somewhere that would like to see Morse code use on the bands ended.

I have seen a few diatribes here against Morse code. Even if one feels it is a mode that offers no redeeming value (I disagree), their discussion of same does not mean that they necessarily feel its use should be outlawed.

We CAN look to the comments made to the FCC, because I don't think that we can infer that those who say here that they think Morse code should be outlawed are necessarily serious. Lacking any evidence to the contrary, I think it quite likely that those statements were made more to stir the pot than to be serious. If those saying they believe the mode should be outlawed were serious, they would have made their views known where they could have an actual effect.

Probably about as close to "proof" as we can get, Cecil. Is it at least "a preponderance of the evidence?" This is a "civil" debate, so we don't need "beyond a reasonable doubt."

That could describe me when I was first licensed as a Novice.

Fortunately, I didn't find anyone who felt that it was best for Amateur Radio
that he reminded me that I was a jittery, fragile newbie with sensitivities.

Frankly, Dick, I would much rather see new hams with sensitivities than those
who are cold and insensitive to the feelings of others.

Careful with that broad brush, Cecil. I have seen some who advocate code testing who feel they don't need to insult new hams to make their points.

>copy from HQ and distributing the magazine?

The magazine is usually sent to the printer around the 25th of the month. The Reviews are usually posted around the 1st. The magazine usually starts hitting mailboxes around the 15th. The issue will be dated the first of the next month, so the March issue should arrive in your mailbox on or about Feb 15.

There is a 99% shot I will be at Ft Tuthill this year. But, as I recently learned, lobster is mighty expensive in AZ. How about we settle for a steak, or you can cook me a hot dog around the infamous Ft Tuthill QRP campfire?

>If you go no further, you have failed at Amateur Radio.

I agree, Jim. I believe that your statement applies to the ham tests of any era. It applies to those who have a BSEE. I think it is expected that we will actually do something with our licences. The FCC does not allocate us spectrum because we pass tests. .
